I bought a HPI Racing Savage XS Flux. I know my cousin had a nitro Red cat RC when he was 10. Now I finally have my own.

I was supposed to break this in on top of a box for 2 charges.

Features:

TF-40/RF-40 2.4Ghz radio
SF10W waterproof servo
Waterproof receiver box
Vapor Pro waterproof brushless ESC
Vektor 4000Kv 1410 4 Pole brushless motor with cooling fan
Fits standard size 1/10th scale electronics
Silicone oil filled shocks with threaded bodies
All-metal bulletproof drivetrain
2.2" wheels and tires (can use most 1/10th scale truck wheels and tires)
Shock towers have multiple shock mounting positions (2)
Quick access to the front or rear differential by removing just 4 screws
Cam type servo saver
Spacious battery box w/locking battery box door
All socket head hardware
Dual pad slipper clutch
Full set of ball bearings
Aluminum motor plate with 4 motor mounting positions
Aluminum hex hubs
TVP (Twin Vertical Plate) chassis
Integrated chassis carry handle
Tough 4-gear differentials
Aluminum front and rear suspension braces
Stainless steel bulkhead lower plates
Front and rear skid plate bumpers
Specifications:
Length: 360mm
Width: 280mm
Wheelbase: 225mm
Needed to Complete:
2S or 3S LiPo Battery & Compatible Charger
AA Batteries for Transmitter
I heard many stories on user reviews where a 3S LiPo battery will fry the motor so likewise bought 2S LiPo battery and charger.

My 4000 Mah 2S battery should still work! It should run slower.

Daytona USA 2: Super Model emulator (2012-03-11 03:47)

I downloaded the Sega Model 3 emulator known as Supermodel _0.2a _Win64 and played a game of Daytona USA 2! I had to re-download the Daytona USA and Daytona USA 2 zips. These Roms already stored on DVDR somewhere in the case anyways. I'm too lazy to fetch the DVDR. I know I had SSF working in 2005, and this is 7 years later. I owned Daytona USA for Saturn since 2000, and for Dreamcast since 2001. Daytona USA surpassed Crazy Taxi 1/2 and Metropolis Street Racer as my favorite Dreamcast racing game. I played Daytona USA multiplayer with a relative. I'm running Daytona USA 2 tracks on the PC. There was a Daytona USA 2 at the Hudson Cinema, but I played on it every time at the cinema. What's two dollars? LOL

Gearbox wants best tech specs for Wii U (2012-03-14 03:00)

Gearbox is the developer of Borderlands and Halo for PC. Our hope at Gearbox is that the final specification for the hardware is much more powerful than the current competitive consoles so that studios like ours can bring a better standard of high definition image not only to television, but to the controller's screen at the same time. Pitchford didn't talk exact specifications, but was insistent on the need for Nintendo to pack the machine with as much graphical horsepower as possible to put Xbox 360 and PS3 in the shade: We've been intrigued by what we've seen so far and are encouraging Nintendo to go as aggressively as they can afford with the performance specifications. We imagine that performance specifications are within affordable reach that would provide undeniable performance advantages over competitive platforms. Nintendo have a lot more experience than we do in managing the balance between performance and cost with their hardware, of course, so I do not want to be presumptuous

I've been eying the Traxas E-Revo VXL for next year purchase. I can afford a E-Revo now, but isn't the Wii U or Xbox Loop a much better purchase due to the sheer OpenGL 3.3 / DirectX 11 GPU technology behind them. Sometime in 2013, I will be buying a Xbox Loop along with Forza Motorsport 5, Perfect Dark 2, and Gears of War 4.

The Savage XS Flux and \$50 Tonka Ricochet (1994) are the only R/Cs I own.

Nintendo Wii U not working and PS4/720 too late to market? (2012-03-20 03:07)

<http://www.ign.com/articles/2012/06/22/are-the-next-gen-consoles-coming-too-late-according-to-IGN-net's-report>, the hardware powering the Wii U simply isn't up to scratch to do what Nintendo needs it to: Namely, run not just the console, but beam data to its fancy touch-screen controller as well. Apparently developers working on the console are having to use "tethers" to ensure serviceable communication between the Wii U and its controller, but even then things still aren't working that well, and progress is reportedly halted daily with repeated software updates for the pad. Xbox 720 and PS4 could be years too late on the market. CNN news thought that Wii U is an accesory for Wii. Videogames look so much more interesting than Hollywood at this point. There isn't anything out that excites me. I end up buying some old 1950's "Twelve Angry Men" and John Wayne boxsets. New shows are complete trash.

Heathcare law update (2012-03-24 11:58)

The court should rule that this individual mandate is unconstitutional. To do otherwise would give Congress almost unlimited power.

The court's mystique and reputation for silence means there have been no special warnings from the justices for employees not to spill the beans on the health care decision. It's not that the health care decision isn't important. It's that clerks, secretaries, aides, janitors, and all of the other staff know they are not supposed to talk about anything the court does until the official announcement.

The government's tax-clause argument is similarly flawed. It asserts that the individual mandate isn't really a restriction on freedom, it's just a tax; violators are forced to pay a fine. If this logic is correct, it would justify any mandate enforced by a monetary fine, whether it be for broccoli, a car or anything else. Every lower court to have considered this constitutional issue has ruled that the mandate is not a tax but a penalty. As President Barack Obama acknowledged in 2009, "for us to say that you've got to take a responsibility to get health insurance is absolutely not a tax increase."

he commerce clause gives Congress authority to regulate interstate commerce. Since the 1930s, Supreme Court decisions have interpreted the commerce clause broadly. But every previous case expanding the commerce power involved some sort of "economic activity," such as operating a business or consuming a product. Failure to purchase health insurance is neither commerce nor an interstate activity. Indeed, it is the absence of commerce.

If the "necessary and proper" clause allows Congress to adopt the individual mandate, the same logic would justify almost any other mandate. Virtually every mandate has some economic effect and could be portrayed as a "useful or convenient" way to regulate some market. A broccoli mandate could be defended as an effort to regulate the market in food.

The threat to liberty raised by this case isn't just theoretical. Many industries would be happy to lobby for laws requiring people to buy their products, and Congress has a long history of enacting special-interest legislation.

PC-BSD 9 didn't have WiFi (2012-03-25 13:48)

By now, I logged in more hours in Linux Mint 11 than Ubuntu 10.10! I was going to install PC-BSD 9.0, yet I couldn't find a Broadcom WiFi PBI file for it. Linux Mint 11 was much more stable running Opera 11.62 than Firefox 10.0.2. (have both). I own Linux Mint 12, yet installation wasn't stable.

Update:

add to /boot/loader.conf

if _bwn_load="YES"

According to the man page, we need the firmware port for this

/usr/ports/net/bwn-firmware-kmod # make install clean

We also need to enable this firmware port in /boot/loader.conf,

bwn_v4_ufcode_load="YES"

Finally, add the following to /etc/rc.conf

network_interfaces="AUTO"

wpa_supplicant_enable="YES"

wlans_bwn0="wlan0"

ifconfig_wlan0="WPA DHCP"

Will this work???

Honneth's "Struggle for Recognition" (2012-03-27 18:37)

Axel Honneth has produced a useful and convincing account of the "struggle for recognition." Honneth comes from a study of Habermas rather than Kojève, but gives his account of interaction a much firmer empirical basis (drawing on the social psychologist Herbert Mead and the child psychotherapist Donald Winnicott rather than Piaget, as well as Jean-Paul Sartre, Georges Sorel and others) and in my opinion a superior philosophical base in the young Hegel rather than Kant. The somewhat vague concept of recognition is unpacked into three distinct kinds of recognition, which support three distinct stages in the development of individuals, each with quite different social and political implications. In each case, instances of the failure of recognition constitute a kind of insult or threat stimulating a struggle to overcome the attack which in turn brings about a development in the corresponding form of life.

"The Struggle for Recognition" comes in three parts. Part I is an examination of the development of the young Hegel, prior to the writing of the *Phenomenology*, in which Honneth argues that Hegel abandoned his original idea of building a social theory on the basis of an intersubjectivist account of the "struggle for recognition" in favour of a philosophy of spirit, and advocates a return to the young Hegel and a carrying through of the methodology abandoned by Hegel.

In Part II Honneth seeks to systematically renew the "struggle for recognition" with "empirical backing" from the social psychology of the pragmatist George Herbert Mead, the child psychoanalyst David Winnicott and others. Here the three phases of the struggle for recognition left uncompleted by Hegel, are given a foundation in the psychology of social and personal development through "love, rights and solidarity".

In Part III, Honneth moves to explore the use of ideas of recognition in social theory and how this concept has been and could be used to shed light on how norms of behaviour are changed through moral struggle. Social and historical struggles are then seen as a combination of "utilitarian" struggles for group-interests and "moral" struggles for recognition which generate new needs and norms.

The three phases of the struggle for recognition are: (i) the demand for love, confirming the reliability of one's basic senses and needs and creating the basis for self-confidence, (ii) the demand for rights, through which one learns to recognise others as independent human beings with rights like oneself, creating the basis for self-respect, and (iii) the demand for recognition as a unique person, the basis for self-esteem and a complex and tolerant social life.

Annotations

Part I (Ch 1-3). Hegel's Original Idea. Honneth's Claim

Part II Chap. 4. Honneth's Social-Psychological Theory

Part II Ch 5 & 6. Love, Rights and Solidarity

Part III (Ch 7-9). Conclusion

Summary

The basic idea of looking for an understanding of modernity in the quality of interpersonal relationships is good, and Hegel's ideas are surely a fruitful place to turn for such a project, and the aim of finding support for this project in the work of the social sciences is valid. However, this is about as far as I can go in accepting what Honneth has produced. Firstly, his failure to even consider the significance of the dominant relationship of modernity, the commodity relationship, shows a blindness which is inexcusable. The project to uncover a "moral grammar" in contradistinction to a "utilitarian/class struggle" reading of history, has perhaps caused him to overlook what he may deem to be a purely "economic" relationship, relying on what would be a species counterposition of economics and ethics.

Consequently, the two relations-to-self which are fostered by the commodity relation, self-respect and self-esteem, are for Honneth two distinct stages in moral development associated with rights and solidarity. But on the contrary, the commodity relation in which one relates to the other as an independent agent and measures their worth on the same yardstick as one's own, important as it is in the construction of modernity, is the root cause of the decline in solidarity.

Honneth is able to fall into, in my view, such fundamental misjudgments because he approaches Hegel as a theorist of intersubjectivity, when in fact Hegel is the theorist of mediation par excellence. Honneth is able to obscure Hegel's idea of the emergence of spirit as mediation by confining himself to Hegel's earliest works and the master-slave dialectic of the Phenomenology and systematically marginalising the concept of mediation in these works.

Honneth's failure to grasp even the meaning of the word solidarity, let alone his attempt to locate the source of solidarity in the market, only highlights the need to further probe the possible source of solidarity in modernity.

Part I. Hegel's Original Idea Honneth's Claim (2012-03-28 18:33)

Honneth's thesis is that the struggle for recognition plays an important role in Hegel's 1802 System of Ethical Life, but that by the time Hegel wrote the Phenomenology in 1807, the struggle for recognition had receded to a minor role, and had disappeared almost entirely in his later works. This is true. Until Kojève popularised the "master-slave dialectic" in his lectures published after World War Two, the "struggle for recognition" was a relatively forgotten theme.

Honneth describes several interrelated changes in Hegel's approach in comparing the method of the System of Ethical Life and the fragments written a couple of years later. According to Honneth:

1. The System of Ethical Life is based on an Aristotelean conception of natural ethical life; i.e., rather than the conception of isolated individuals coming together to form a society, in the spirit of Machiavelli, Hobbes and Kant, Hegel returns to the ancient conception of human beings as *zoon politikon* in which political science is concerned with the training of citizens in the virtues required for participation in political life. This is supplanted in the later works by a philosophy of consciousness. Here Spirit thus replaces Nature, giving much greater scope for the development of cognitive and moral distinctions, but losing touch with the roots of civilisation in the natural life of human beings.
2. In the System of Ethical Life the formation of ethical life is an agonistic process, where development arises out of intersubjective conflict, but in the later works social development is directly the self-formation of spirit, through the mediation of language, tools and family property.
3. Only in the System of Ethical Life is the struggle for recognition a medium of individualisation and increasing ego-competence. The use of a philosophy of Spirit distances Hegel from the explication of a process of simultaneous emancipation and individuation and growing awareness of one another as individuals, driven by the struggle for recognition.
4. Whereas the System of Ethical Life begins with people living in communities in which individualism and private property are unknown, in a philosophy of spirit, communicative relations between subjects can no longer be conceived as something that in principle precedes individuals. Elementary relations of communicative action (strong intersubjectivism) are replaced by a confrontation of individuals with their (social) environment — the relation of each isolated

person to the State. Conflict between individuals no longer represents a medium of consciousness formation, but merely a medium for integration into the community.

5. Whereas the System of Ethical Life has the character of a 'history of society', with the methodological change to a philosophy of Spirit, Hegel gains the possibility for conceptually distinguishing more precisely between the individual stages of consciousness formation. However, the loss is that Hegel's political philosophy becomes simply an analysis of the education of the individual for society.

6. In the System of Ethical Life, the "struggle for recognition" makes two distinct appearances, (i) to describe the construction of relations of love and (ii) to describe the formation of legal relations between agents in civil society (rights), but when Hegel comes to the third part of the work, "Constitution", and the exposition tails off into a series of headings, the opportunity to elaborate a phase of the struggle for recognition in which the political system is formed is not carried through. In the later works, the "Constitution" falls back to being the concluding part of "objective spirit", and the crowning section of the whole system becomes "Absolute Spirit". Hegel never carried through the opportunity to elaborate the formation of the state as a third phase of the struggle for recognition.

As a result, unlike burgers, citoyens are not conceived as social persons who owe their capacities and qualities to successful interaction with individuals who know themselves to be citoyens. The categories with which Hegel operates refer not to interactions among citoyens, but rather only to the relation of citoyens to the State as the embodiment of Spirit, which is, moreover, a state of an authoritarian type.

7. Whereas in the System of Ethical Life, crime is driving force for the creation of property and law, in the later works, Hegel makes no mention of progress that would affect the content or structure of legal recognition as a result of challenges to the law. Instead the universal will responds by re-establishing its power over the breakaway individual.

8. Thus Hegel's analysis fails to live up to its own standards. He originally set out to interpret into the criminal's deed a radical demand for legal recognition which he ultimately cannot integrate it into the framework of legal relations. He thus fails to fulfil the suggestion that the development of legal relations is itself once again subject to the normative pressure of a struggle for recognition.

9. The respect of each and every person for the biographical particularity of every other would constitute the habitual underpinnings of a society's common mores, but Hegel can no longer entertain such a conception of ethical life, because he conceives of the ethical sphere as a self-manifestation of Spirit. The consciousness-theoretic foundations prevail over the 'recognition-theoretic' substance. According to Honneth, Hegel gives in to the pressure to project into the organisation of the ethical community the hierarchical schema of the whole and its parts, in terms of which he had already laid out constitution of the ethical community as Spirit's act of reflection on its own externalisation.

10. Ethical life has become a monologically self-developing Spirit, rather than a demanding form of intersubjectivity.

11. Even though Hegel wanted to understand the constitution of both the legal person and social reality as stages of a formative process of Spirit, that did not prevent him from making, within the framework of a philosophy of consciousness, the relationships of interaction between subjects the media of these formative processes of the Spirit. Had he consistently carried the logic of this process into the constitution of ethical community, that would have opened up a form of social interaction in which each person, in his or her individual particularity, could reckon with a feeling of recognition based on what Honneth calls "solidarity". A struggle for recognition at this level would have made the centrality of the experience of risking one's life more plausible than it is in the context of conflicts over individual property rights.

12. As a result, the possibility of Hegel returning to the incomplete model of the 'struggle for recognition', is blocked. Accordingly, in the later works, one finds only traces of the earlier programme. But neither the intersubjectivist concept of human identity, nor the distinction of various media of recognition, nor the historically productive role for moral struggle acquire a systematic function within Hegel's political philosophy.

I now want to respond to these observations, and the drift of my response is that Honneth has correctly identified the particular value of the young Hegel and what was lost in the move to his mature works, though some qualifications need to be made. However, attention needs to be given to what Honneth describes as the methodological advantage of the philosophy of consciousness as against the intersubjectivist methodology. As a result, what I propose as the basis for further development is a partial return to the mature Hegel in order to successfully merge the intersubjective vitality of the young Hegel with the centrality of mediation in the mature Hegel.

“There is nothing, nothing in heaven, or in nature or in mind or anywhere else which does not equally contain both immediacy [Unmittelbarkeit] and mediation [Vermittlung], so that these two determinations reveal themselves to be unseparated and inseparable and the opposition between them to be a nullity.” [Hegel, Science of Logic]

1. Anyone who may be familiar with Hegel's later works and who may have thought that Hegel was a philosopher whose ideas had social and political implications, when they turn to the System of Ethical Life will quickly realise that the truth is the other way around: Hegel's primary concerns were political, specifically how was Germany to become a modern nation. But is it entirely true that it was only after writing the System of Ethical Life that Hegel seized upon the idea of giving his ideas the shape of a philosophy of consciousness?

The opening lines of the System of Ethical Life are:

“Knowledge of the Idea of the absolute ethical order depends entirely on the establishment of perfect adequacy between intuition and concept, because the Idea itself is nothing other than the identity of the two. But if this identity is to be actually known, it must be thought as a made adequacy.”

and the first section on Absolute Ethical Life begins with the explanation:

“This absolute ethical life on the basis of relation, or natural ethical life must be so treated that (a) concept is subsumed under intuition and (b) intuition is subsumed under concept.”

So it would seem that while it remains true that it was the problems of modern social and political life which were Hegel's motivation, from the outset he wanted to solve this problem in the terms of a philosophy of consciousness. He saw that the theoretical problems of analysis and the practical problems of social life were aspects of one and the same process. Hegel's bold move is to view the ideals reflected in consciousness as objectively existing forms of life, rather than simply as products of subjective thought. Further, he intends from the outset to tackle the disconnection between the daily life of the people and the intellectual life of the political elite in the very terms of the deep-seated problems of Western philosophy which had so far barred the way to a comprehension and solution of the problem of the state.

Consequently, without detracting from the criticisms Honneth makes in respect to the cost of Hegel's abandonment of the intersubjective themes of the System of Ethical Life, it seems that the aim of constructing a philosophy of consciousness in order to explicate the problems of modernity was present from the beginning. Nevertheless, the terms quoted above about concept and intuition do not undergo very much further development; the rest of the System of Ethical Life looks for all the world very much like a “history of society”. So not only was the project of explicating the construction of human life by means of intersubjective conflict left unfinished, so was the elaboration of a philosophy of consciousness.

2. As impressive and dynamic as is Hegel's mature system, driven forward at every point by contradiction, I think Honneth is right in observing that the marginalisation of the drama of the direct struggle between two self-consciousnesses represented a significant loss. However, it is not a philosophy of self-forming Spirit which steps into the place of intersubjective conflict, but the mediation of conflict. What is so uncharacteristic about the master-slave dialectic, for example, is the metaphor of a direct, i.e., unmediated, confrontation between two self-consciousnesses.

As the young Marx remarked on the Philosophy of Right:

"This is a kind of mutual reconciliation society. It is as if a man stepped between two opponents, only to have one of them immediately step between the mediator and the other opponent. It is like the story of the man and wife who quarrelled and the doctor who wished to mediate between them, whereupon the wife soon had to step between the doctor and her husband, and then the husband between his wife and the doctor." [Critique of Hegel's Philosophy of Right, Marx 1843]

The result is contradictory to say the least. Even though for Hegel "contradiction is the root of all movement and vitality" [Science of Logic], this movement takes the form of the successive reconciliation of contradiction. Moreover, it is precisely through these mediating elements, such as tools, language, property, the State, that Spirit is formed. There can in fact never be such a thing as direct (i.e., unmediated) contact between one self-consciousness and another. But don't we cry out against such an assertion! Good communication gives us the illusion of directly accessing each other's self-consciousness.

Thus, as Honneth observes, intersubjective conflict is not given up in Hegel's mature system and it does not cease to be the very engine and medium of its formative process, but in the mature system, all oppositions are forms of mediation. The creative capacity of conflict in Hegel's work is inseparable from mediation; intersubjective conflict is inconceivable without mediation, only in the System of Ethical Life this is not yet developed.

3. Honneth claims that only in the System of Ethical Life is the struggle for recognition a medium of individualisation and increasing ego-competence. I question this. In the System of Ethical Life, the media of individualisation and personal development are already the mediating ideal elements of products of labour, language, property and so on. Recognition functions as the immediate initiating moment. Being already familiar with the description of recognition given by Kojève, it is very easy to ascribe the whole dialectic to the "struggle for recognition", but is this the meaning given to "recognition" by the young Hegel?

The Struggle for Recognition in Hegel's System of Ethical Life

As Honneth points out, one of the difficulties of the System of Ethical Life is Hegel's odd choice to locate the negative aspect of the transitions through all the levels of the logical-historical exposition in a separate, second section of the work, leaving the first section to rise from natural ethical life to civil society through a process in which the process of objectification, the internalisation of objective activity and the differentiation of labour appears to happen through a conflict-free ascending process. In later works, this negativity is located within the exposition of each transition, and at the same time the specific conception of the negativity as a "struggle for recognition" is abandoned, in all but the single instance of the formation of self-consciousness in the Master-Slave dialectic.

The one benefit of this construction is that it allows us to focus on a concentrated passage of nine pages to study the form of the "struggle for recognition" as it is presented in the System of Ethical Life.

Hegel introduces the idea of negativity in the development of society with a metaphor about the relation of sense perception and concepts, continuing his theme of a philosophy of consciousness as the means to clarify the nature of social life.

In this context "pure freedom" is found in activity for which the concept (for example, property) is unknown — spontaneous collaboration on one side and mutual indifference on the other. This work is difficult to understand and not lacking in ambiguity, but I agree with Honneth that the starting point, Nature, is a form of life in which property is unknown because people are living in a "natural" community. It seems that Hegel sees property (and therefore culture and 'concept') arising from a cycle which begins with defending oneself against "natural" (unconscious) transgressions of one's activity, transgressions which are not of course 'deliberate' in the sense that initially there is no concept, no property, and therefore the 'transgression' arises not from an attack on property but from a non-recognition of personality and property. In that sense then the attack comes from an outsider or stranger; the assailant maybe human, but their action is in the same category as a natural disaster or attack by a wild animal, and they are not recognised, for their part, as human beings.

A "natural" activity is not something known; it is not a concept — until it has been taken away, and you become aware of it as a loss; ideal in the sense that it exists now only in the mind, but still determinate, since it has not been generalised. "But against this negation there must be a reaction", an attempt to restore the negated conditions of

natural activity. "The negating subject makes himself a cause,...What he negated is equally to be negated in him". [System of Ethical Life, Part 2]

Hegel then moves to referring to the negating subject as the "criminal", and the action of the reacting subject as "revenge". "The criminal has directly injured something he regards as external and foreign to himself". That is, the criminal sees no property or right, no personality, in the injured party. But the injured party will exact revenge. In bringing this revenge upon itself "he has ideally injured and cancelled himself". Initially, "consciousness of this his own destruction is a subjective and inner one, or a bad conscience. ... It also manifests itself externally as avenging justice ... until it sees the ideal reaction or reversal confronting it and threatening its reality from without as its enemy". "It begins to be satisfied because it discerns the beginning of its own reality in its enemy. It produces an attack on itself so as to be able to defend itself". Hegel goes on to describe how a return to mutual indifference does not suffice to establish the 'concept'. And "peace" only means that the fear of the external enemy remains, and ultimately only annihilation of the enemy will suffice.

Difficult as the text is, I must concur with Honneth that Hegel appears to follow the emergence of subjectivity here from the view point of the "criminal," that is, from the point of view of the subject who has unconsciously injured the other party, and followed up the initial injury with the establishment of property rights and the annihilation of the initially injured party. However, the concept of crime is to break a law, and in the instance we are looking at there is no law to be broken. What is violated is natural activity, not "law", something taken for granted, something natural, objective, purely determinate and not ideal.

Hegel looks at three forms of the negation, viz., murder, revenge and war.

"Murder precludes the recognition of this relation [the transformation of specific determinacy into personality]".

Revenge, reverses the form, i.e., one dead body is matched with another, being that of the perpetrator, but "the real life properly belonging to the spirit has remained; the spirit has preserved its body and the murder has destroyed only one single member or organ of the whole, and so this still living body, i.e., the family, takes on itself the work of revenge".

"The totality of this relation is what is rational and it makes the middle term emerge. The indifference of the justice which lies in revenge, but as something material and external, enters the individuals as a like consciousness of the emerging negation, and therefore the reality of this emergence is alike too on both sides."

The act of revenge eradicates the relation of indifference between the families: "for revenge the avenger is not a stranger ... but a member of a family ... Similarly the injurer is not a single individual; it is not as single individual but as the member of a whole that he has done injury". ... "In this way, the middle term is directly posited at the same time, i.e., negatively as the cancelling of superiority and lack of consciousness in the one, and equality of peril for both, i.e., battle. ... Right is on the side that has been injured."

However, if this activity of murder and revenge continues it can escalate to war, and "equality is what rules" ... "Both parties are identical". "Either neither party can prevail and the two sides return to a state of mutual indifference, or one party is defeated and completely subjugated and enslaved." "In this case it is a higher principle, not the trivial question of the original injury that is decisive, but the greater or lesser strength ... with the establishment of a relationship of mastery".

I don't think this can be squared with Honneth's view that Hegel "interprets into the criminal's deed a radical demand for legal recognition"; firstly, the initial "infringement" is unconscious; secondly, the outcome is just as likely to be annihilation of the criminal. All that matters when two parties go to war is their relative strength.

Hegel's exposition of these conflicts reads like the relations between families, tribes and nations, rather than relations between individuals, but my reading is that Hegel is talking about "self-consciousness" in the broad sense, as social/historical agents, whether collective or individual.

About honour: where an injury to the particular takes on the implication of a threat to the totality, it is nothing to do with "psychology" or chivalry, but the fact that a particular injury or insult calls into question the whole personality of the injured party. In a situation where there is no "higher authority", the smallest insult, if not restored, indeed opens the injured party to total loss of rights and life. The act of revenge therefore is a necessary measure to engender in the assailant party recognition of personhood at pain of death. It doesn't matter at what level this insult and restitution occurs, if there is no existent means of mediation and law, life is indeed on the line.

Nevertheless, when Hegel talks of annihilation and "mastery" I believe he is talking about the ideal element rather

than simply the material annihilation of a people; more likely, mutual recognition is established, but on terms dictated by one party and not the other. This is how “the middle term” emerges.

What is particularly appealing about this part of Hegel’s writing is the personal, immediate and dramatic character of the confrontation described, which is in such marked contrast to the mutual indifference of the preceding relationship and the mediated form of succeeding relationships. Those who feel that they are not recognised within a given social arrangement, who are subject to random incursions against their livelihood and can only carry out random acts of revenge or battle to restore their honour, for whom there is no court to whom appeal could be made — such people, the excluded, could identify with this.

Let us assume that the cycle of murder, revenge and war described by Hegel is indicative of the general form of the struggle for recognition. What sets the process in motion therefore is not necessarily murder, but an injury done by one party to the other through failure of recognition of the other as a human being, or a failure of a recognition of a tie to something objective, such as in the usage of land, etc., intrusion into which threatens the livelihood and life of the other. The cycle of counter-attacks which follow serve the function of forcing the assailant to “get a conscience” a recognise the rights of the other. Such a struggle for recognition cannot occur so long as people live in indifference to one another. But material contact brings into question the ties of each party to the material things subject to contact.

The point is that mediation is constructed; normally people interact within a social environment in which everything is highly mediated; development happens through conflict and failures in mediation, but it is not normally the case that one self-consciousness confronts another in a life-and-death struggle without mediation. To what extent can the “struggle for recognition” function as a “model” or archetype for all conflict and development? To what extent can social development, and the human condition generally, be understood in terms of unmediated conflict?

Well Hegel of course would have been the last person to propose such a thing. The whole development is outlined in the first part of *System of Ethical Life* with very little recourse to the notion of a struggle for recognition at all, and as we know, in his later works, the role of the struggle for recognition underwent further and further attenuation.

Honneth points out that in the *System of Ethical Life*, the struggle for recognition plays a key role in the formation of ties of community and in the formation of property rights, and in the *Phenomenology* is retained just as a moment in the formation of self-consciousness. Hegel, clearly, did not see the “struggle for recognition” as a concept which could be generalised as a model for the process of “negation” in the way it is placed in the *System of Ethical Life*.

The fact remains of course, that at a certain point in history failure of recognition emerged in far from primeval conditions, but more of this later.

4. Honneth claims that in a philosophy of spirit, communicative relations between subjects can no longer be conceived as something that in principle precedes individuals, and further that instead of shedding light on person-to-person relations, a confrontation of individuals with society and the State is thematised, and that conflict between individuals no longer represents a medium of consciousness formation, but merely a medium for integration into the community.

Hegel was subject to criticism from a number of directions after his death, some of which are not dissimilar to the points made here by Honneth.

Honneth connects the move to a philosophy of spirit with the marginalisation of the “struggle for recognition”, but let us separate the question of a philosophy of spirit versus a theory of communicative action, from the separate question of the proper place of unmediated “struggle for recognition” within a theory of communicative action.

Marx for example responded to the idea of a Spirit which “remains in the background, untouched and uninjured,” while “states, nations, and individuals ... are all the time the unconscious tools and organs of the world mind at work within them” with the dictum: “Men make their own history, but ... under circumstances existing already, given and transmitted from the past”.

But in any case, as Honneth points out, the adoption of a philosophy of spirit “that did not prevent him from making, within the framework of a philosophy of consciousness, the relationships of interaction between subjects the media of these formative processes of the Spirit”.

The real point is whether a theory of communicative action can be rationally developed on the basis of intersubjective relations which lack mediation. When Honneth claims that elementary relations of communicative action are

replaced by Hegel with a confrontation of individuals with their (social) environment and the State, he is decrying a conception of communicative action which is essentially and necessarily mediated.

So for example, when people talk, can we marginalise the fact that they communicate through language? when they work together, can we marginalise the means and relations of production that are mobilised in the labour process? in domestic activity, can we marginalise the place children play in the relation between husband and wife or the family property in the relation between parents and children? The questions are meant to be rhetorical. It was Hegel's view and I share the view, that sense can be made of communicative action only by understanding the specific form of mediation engaged in the communicative action. I have made a critique elsewhere of Habermas's theory of communicative action and everything I said there stands in relation to a theory of communicative action built around the metaphor of a struggle for recognition.

The distinctive feature of the "struggle for recognition" which disappears in the developed Hegelian system is that the life-and-death confrontation it portrays is unmediated. The metaphor of a direct, unmediated contact between two self-consciousnesses also represents a desire; not only does the "struggle for recognition" capture the viewpoint of the excluded, who are not recognised and "treated like doormats" within the existing culture, it also captures the desire of the citizen of modernity to recover real person-to-person immediacy in a world so layered in text and mass-produced images that reality — direct, human relationships — seems to have disappeared from view. The recognition formerly accorded people through familial and professional relationships is now swamped by external rewards of money and fame.

Now to Honneth's point that without the struggle for recognition, conflict between individuals can no longer constitute a medium of consciousness formation, but merely a medium for integration into the community. This "allegation" has a ring of truth. Marx put it this way: "The important thing is that Hegel at all times makes the Idea the subject and makes the proper and actual subject ... the predicate. But the development proceeds at all times on the side of the predicate." I think that the ring of truth in Honneth's allegation reflects another aspect of modernity: every manifestation of human creativity is subsumed into and appears as the action of the generalised other, of capital. I think that Honneth's observation has merit, but Hegel should be given credit for expressing the power of capital so well as a philosophy of Spirit. Hegel's mature philosophy expresses the still-dominant truth of the rule of capital, that human creative energies, far from expressing freedom, are integrated into an alien, ruling power. As a result, the idea of capturing the dynamics of the "struggle for recognition" as an expression of consciousness formation acting within the rule of "Spirit" is attractive, even if Hegel cannot be blamed for failing to do so.

5. Honneth refers to the change from the System of Ethical Life to the later works as a methodological change from a 'history of society' to a philosophy of Spirit. While granting the advantage of a capacity to more precisely distinguish between the individual stages of consciousness formation, Honneth claims that the historical element lost from the 'history of society' falls to the individual, so that Hegel's political philosophy becomes an analysis of the education of the individual for society.

I think that the historical character of the exposition in the System of Ethical Life is unmistakable, and outside of the Philosophy of History itself, the historical exposition nowhere else plays such a role as it does here. But Hegel does not of course claim that the System of Ethical Life is a work of history, and nor could he. This raises the question, as valid for all the later works equally as for the early works, of the relation Hegel intends between the logical and historical aspects of his exposition, as well as the ontogenetic and phylogenetic historical expositions within the Phenomenology and the Encyclopedia.

In the first place, although the historical method of presentation of the whole system is not later adopted in quite the direct way as it is in the System of Ethical Life, it pervades the whole work; it would be impossible to read Hegel's mature work without gaining an insight into culture as historical constructs. Hegel's work is not so much a work of history, but a logical reconstruction which allows history to do its work, and that is how a 'history of society' becomes a philosophy of spirit. Our work now is to logically reconstruct the "struggle for recognition" from the material given by history. But history poses the question from which logical enquiry begins only at the end of the story. Thus the logical and historical enquiries proceed in opposite directions.

In the second place, Hegel's work can never be read like a story from beginning to end; it is always many stories one

within the other, each providing the beginnings and endings for other stories within the construction. The starting point for a child, for instance, is the adult world into which they are born, which is to be the end point for their own development, or rather its negative, for the world will have changed by the time they grow up and join the world of adults. History on the other hand, always begins with fully competent and independent adults, and winds up with citizens more dependent than ever on their social environment.

I question the assertion that the mature Hegelian system is any less historical than his early work, but I think the fact remains that Honneth has identified an element which was contained within the “struggle for recognition” which is lacking in the mature system, but I think it is one which was not available to Hegel, simply because the “struggle for recognition” in the sense in which we have come to understand it, had not yet been posed by history in Hegel’s time. More of this later.

6. Honneth points out that while a struggle for recognition was used to describe the basic bonds of love and the constitution of the relations of mutual respect between property-owners, no such struggle for recognition was used in the construction of the state and the formation of political consciousness. That is to say, Hegel failed to outline the necessary formative intersubjective experiences that would allow people to know themselves as political actors. Instead Honneth argues, a person’s development as a political actor or citizen is centred on his relation to the State, an authoritarian state. Later Honneth refers to the particular kind of self-affirmation which forms the basis for the development of such a social and political consciousness as “solidarity”.

I think this is a profound observation. The word “solidarity” — in German *solidarität* — did not enter the language until 1848, from the French *solidarité*, and in both cases they entered the language via the workers’ movement. That is, the concept arose only 17 years after Hegel’s death. In other words, certain kinds of social and political experiences and activities were indeed necessary for this concept to emerge, but the relevant kind of experiences were not known to Hegel.

For Hegel, “society” was composed of people with rights and consequently with property. The “rabble” constituted a serious social problem, but they were not part of society. The “rabble” had no voice. Hegel had not “forgotten” about them, far from it, but it never entered Hegel’s mind that the problem of the rabble would be solved by the rabble itself.

So Honneth’s observation is spot-on, but it is not just a theoretical shortcoming or error. Until the Chartist uprisings and Parisian street battles of the 1830s, there was no social basis for a concept of solidarity and no basis for building the concept into a philosophy of consciousness or political philosophy.

We will return to this extremely important issue later.

I think Honneth is mistaken to so off-handedly dismiss Hegel’s conception of the state. As a constitutional monarchy it is no more authoritarian than modern day England. Though Hegel’s hostility to popular suffrage would not stand up today, the system of collegial and participatory democracy he envisaged (for male property-owners only of course) looks good in the light of a century or two’s experience of popular suffrage. Hegel was writing at a time when The Absolute Idea rode around Europe on horseback (this was how Hegel described Napoleon when he entered Jena) and the implementation of Rousseau’s social contract in France had been very ugly. Nevertheless, on the basic point I am in agreement: “solidarity” is a fundamental mode of interpersonal experience which forms the basis for the development of social and political consciousness, and the social basis for such experiences entered the historical scene in the 1830s and 40s with the proletarian opposition to capitalist exploitation.

7. Honneth goes on to point to the absence of a kind of crime which would stimulate the development of social and political mores, and that to the contrary, what Hegel outlines is a system aimed at strengthening the capacity of every citizen to see in the action of the State an expression of their own will. This view is characterised as one of social conformism.

I think this is a fair characterisation of Hegel’s vision for a nation-state in which the class struggle did not exist.

Honneth pointed out that even though Hegel wanted to understand the constitution of both the legal person and social reality as the work of Spirit, that did not prevent him from making, within the framework of a philosophy

of consciousness, the relationships of interaction between subjects the media of this work. He suggests that a continuation of this logic into the constitution of ethical community would have led to a struggle for recognition as the formative process for social and political consciousness based on “solidarity”. With some qualifications, I think Honneth is right on this. What remains is to uncover the nature of the intersubjective experience which constitutes solidarity, and how this relation comes to be mediated, and the specific form of mediation characteristic of solidarity.

Mediation and the development of self-consciousness

In summary, from Honneth's reading of the System of Ethical Life, we have learnt that: the struggle for recognition is the direct (unmediated) confrontation between two self-consciousnesses; its movement begins with a failure of recognition associated with the lack of mediation; in the course of the struggle which results, each self-consciousness mediates the development of the other.

1. What transformation took place in the struggle for recognition in the System of Ethical Life and the philosophy of Spirit of the mature Hegel?
2. How can we retain the immediacy of the struggle for recognition in a conception of communicative action which is compatible with a dialectical consideration?
3. What can Hegel tell us about the notion of “solidarity” as the formative experience which underlies the development of political consciousness?

The Master-Slave Dialectic in The Phenomenology

Despite the drama and immediacy of Hegel's master-slave narrative, it is a story of mediation from beginning to end. The answer to the riddle as to how two self-consciousnesses may make contact is simply that in the first place, the two self-consciousnesses are not differentiated at all, and in the second place that the objectification of each self-consciousness acts as the middle term for the relation of a self-consciousness with itself.

Duplicated Self-consciousness : Thinking of this in terms of individuals or families living in a community (or equally well, communities living in proximity without any division of labour, exchange or unifying state, etc.), the “individuals” concerned work cooperatively and do not differentiate themselves from the community as a whole, there is no surplus for redistribution, no division of labour or exchange; the others in the community are others just like themselves, the world is organised in accord with the customs and beliefs of their times and all act in accord with those customs and beliefs. The self-consciousnesses are not “mediated” with each other because they are not differentiated at all; there is in a sense only one self-consciousness, objectified in a single, “natural” ethical life; and everyone sees themselves in the activity of the others, and expects others to behave as they do.

So this “embryonic” self-consciousness has a double form, one subjective and one objective, one is self and one is other; each is both the objectification and internalisation of the other. We have an undifferentiated objective/subjective self-consciousness.

Hegel sums up this “Duplicated Self-Consciousness” with the following:

“The middle term is self-consciousness which breaks itself up into extremes; ... Each is the mediating term to the other, through which each mediates and unites itself with itself; and each is to itself and to the other an immediate self-existing reality; which at the same time, exists thus only through this mediation. They recognise themselves as mutually recognising one another” [Phenomenology, § 184]

Self-consciousness in self-opposition : The process of self-consciousness which Hegel demonstrates from here involves “the break-up of the middle term into the extremes ... of which one is merely recognised, while the other only recognises”.

The purpose is to logically reconstruct modernity from the self-differentiation of “duplicated self-consciousnesses”; phylogenetically, think of neighbouring “natural” communities coming into relation with one another, ontogenetically, of a child developing a personality.

Hegel claims that each self-consciousness needs to demonstrate that “it is fettered to no determinate existence” and that “each aims at the destruction and death of the other.” Self-consciousness enjoys self-certainty on the basis of the other as either a duplicate of itself or as an object, subsumed within the objectification of itself. As soon as the other demonstrates a will of its own, the existence of a self-consciousness is mortally threatened. There exists no basis for cooperation of two mutually independent self-consciousnesses; each self-consciousness should rightly feel in danger of being treated like prey or used as a “door-mat” by the other. This mortal crisis can be solved by reduction of the other to an object, its subordination or death.

Viewed from the present, this seems to be an unreasonable overstatement. But for the newly emergent self-consciousness, it is pre-supposed that there are no laws or social customs or “civil rights” capable of coordinating the activity of the subject with another independent self-consciousness. This phase of the process of self-consciousness described by Hegel ends in the destruction of one or the other or their mutual withdrawal into indifference. That is,

“the middle term collapses into a lifeless unity which is broken up into lifeless extremes, merely existent and not opposed.”

Master-Slave : This life-and-death struggle gives rise the possibility of the subjugation of one self-consciousness by the other — the famous Master-Slave dialectic — in which the “master” appropriates the social surplus produced by the “slave.”

The dominant subject is mediated with itself through the activity of the other; “it is a consciousness existing on its own account which is mediated with itself through another self-consciousness”; that is to say, the objectification of the dominant subject is the labour-activity of the other self-consciousness.

“The bondsman being a self-consciousness in the broad sense, also takes up a negative attitude to things and cancels them; ... but he merely works on it. ... The master, however, who has interposed the bondsman between it and himself, thereby relates himself merely to the dependence of the thing, and enjoys it without qualification and reserve. The aspect of its independence he leaves to the bondsman, who labours upon it”.

The two self-consciousnesses in the master-slave dialectic are therefore mediated by the labour product of the slave, in a labour process which is the material objectification of the needs of the dominant subject. The whole dynamic of this relationship then unfolds according to mediation by a labour process in which theory and practice are separated into opposite poles.

In summary, in the first stage, self-consciousness is undifferentiated and each mediates the relation of the other to itself; in the second stage, when self-consciousness emerges in the absence of mediation the result is either destruction of one or other self-consciousness or their mutual repulsion; in the third stage, the conflict is resolved by the incorporation of the dominated subject within the labour process of the dominant subject and the appropriation of the surplus.

It is only in this third stage that recognition is completed, albeit one-sided and unequal. For the “independent” self-consciousness, its truth is the activity of the unfree consciousness. “The consciousness that toils and serves ... attains by this means the direct apprehension of that independent being as its self. ... shaping or forming the object has not only the positive significance that the bondsman becomes thereby aware of himself as factually and objectively self-existent. ... having and being a ‘mind of his own’.” The labour process is no longer immediate and natural, but mediated through a ruling class; consumption is no longer immediate and natural, but mediated through a process of distribution of the social surplus.

Thus, through the last stage in this dialectic, we have the self-consciousness of an individual really distinguished that the community as a whole, the essential basis for the development of civil society and rights.

I have traced the description of the “struggle for recognition” as it is found in the Phenomenology in order to bring out the fact that for Hegel the issue in tracing the emergence of self-consciousness is to trace the specific forms of mediation which can arise from the situation where there is no self-consciousness and no mediation, and create the pre-conditions for individualism and civil society.

The point of interest is how this particular passage of the mature Hegelian system, with its emphasis on intersubjective action, can be generalised as an explication of the formation of different components of self-consciousness. I have

briefly indicated above the possible reading of the dialectic of self-consciousness in phylogenetic and ontogenetic terms. Honneth wants a third form which provides an insight into the basic forms of experience underlying political consciousness.

"Self-consciousness" is a category capable of any number of conceivable materialisations. The broadly common form is as follows: (i) Both subjects, despite their determinate positions within the division of labour, each see themselves in the other, any division of labour appearing as natural and unremarkable aspects of a single culture; (ii) the different activity of a group generates a distinct sub-culture or subordinate consciousness, alien to the dominant culture; (iii) the consciousness of the labourer of their mastery of the dominant culture, the enjoyment of which they are excluded from, generates the "struggle for recognition" as such.

Thus, while at first sight, the struggle for recognition appears to be the direct confrontation between two self-consciousnesses, it turns out that when the subjective and objective sides of each self-consciousness are brought into the picture, what is going on is a complex process of reciprocal mediation.

So how does the notion of "solidarity" fit into this picture? Solidarity is the process of subject-formation in which a person voluntarily places themselves outside of the dominant culture to identify with an emergent other, and conversely, where a subject (willingly or not) in conflict with the dominant power experiences others "standing up to be counted" alongside them. What is essential to the process of solidarity is that those giving solidarity risk their lives under conditions when they could stay with the dominant power, and those receiving solidarity are already fighting. I agree with Honneth that solidarity is a key concept, amenable to understanding in terms of the Hegelian "struggle for recognition", which forms the formative experience for political (rather than administrative) consciousness. My qualification though is that there is an essential mode of mediation involved in the process of solidarity, namely the struggle for survival of the first subject. It is by people voluntarily joining the struggle that solidarity comes about. The individual who is fighting for their life does not know about solidarity so long as they are joined only by others who likewise have no choice but to fight. Political consciousness arises when aid comes from an 'unexpected' quarter.

How does this conception of 'solidarity' square with Honneth's demand that the young Hegel could have used it to conceptualise the formation of the state? Perhaps a different word should be used, but it seems to me that 'solidarity' has nothing to do with the formation of a bourgeois state. Hegel saw the state as mediating conflicts between the various estates and industries in civil society, but I don't know that 'solidarity' is the right word for this process.

Conclusion

The "struggle for recognition" as a conception of social development in terms of intersubjectivity has the potential for application to the understanding of social and political development. The struggle for recognition, as described by Hegel, is never a binary relationship however, it represents an approach to intersubjectivity which explores how subjects mediate the relationships between each other and themselves.

An exploration of the struggle for recognition as an approach to political consciousness formation through solidarity should be fruitful, provided use is made of the concepts of mediation we can learn from the mature Hegel.

Honneth's Social-Psychological Theory (2012-03-29 18:34)

In Part II of his book, Honneth aims to draw on work of the empirical sciences to reconstruct in modern terms concepts of the 'struggle for recognition' originally outlined in metaphysical terms by the young Hegel.

The first step in this process is the appropriation of the ideas of George Herbert Mead, an associate of John Dewey, who worked out the application of Dewey's ideas in social psychology. I question whether G H Mead's work can be counted as 'empirical science'; it would be more correct to say that he formulated in naturalistic terms, the application of Dewey's behaviourist-pragmatic psychology to social-psychological speculation, albeit brilliantly. Dewey and Mead were quite conscious of themselves as Hegel-interpreters, integrating Hegel's insights into the pragmatist philosophical milieu of the United States. The Progressive movement of early twentieth century America did, however, provide a proving ground for their ideas.

I agree with the idea of exploring the possibilities of grounding Hegel's ideas in modern social and psychological research, but furthermore, I believe that the Vygotsky School in the Soviet Union provides what may be a superior basis for such a grounding. Dewey visited the Soviet Union in the 1920s and his ideas were among the conditions which led to the emergence of this school. Nevertheless, despite all the difficulties of scientific work in the Stalinist USSR, the Vygotsky school actually did carry out over a period of many decades a highly developed research program, including experimental work, and it was a Marxist rather than a pragmatic philosophical legacy which informed their thinking. In the 1980s, their work became known in the West and has been further developed in the United States and elsewhere, including its reconnection with American Pragmatism.

Let us review Honneth's appropriation of Mead, however, and then we can explore where a Vygotskyian-Marxist critique of the appropriated behaviourist-pragmatist interpretation of Hegel might lead us.

As an aside, in introducing this project, Honneth defines the task in these terms:

1. Hegel's model starts from the speculative thesis that the formation of the practical self presupposes mutual recognition between subjects ... but instead of viewing intersubjective relationships as empirical events within the social world, he builds them up into a formative process between singular intelligences ... what is needed, in the first place, is a reconstruction of his initial thesis in the light of empirical social psychology.

Although this paragraph is a little ambiguous, I think it is a miss-formulation of Hegel's schema. For Hegel "intersubjective relationships" are prior to "singular intelligences"; what Hegel refers to as "intelligence" is a higher stage of subjective spirit, which rises through a process of differentiation from "soul" (the subject matter of anthropology in which an individual subject does not differentiate itself from its objectification in a community of subjects, or, ontogenetically, a child does not distinguish between its own actions and those of its environment), consciousness (the subject matter of phenomenology) and spirit in-and-for-itself (the subject matter of psychology). What Hegel calls "self-consciousness" arises through the famous "master-slave dialectic" in the second phase of subjective spirit. However, Hegel's starting point is communities living in a way in which subjective consciousness is not differentiated from collective social behaviour, where individual subjects do not fully differentiate themselves from an objective field of social interaction with other people. That is, people are already living in communities and working together prior, whether interpreted ontologically or anthropologically, to becoming self-conscious.

This may be neither here nor there, but I think it is important to avoid presupposing what is to be derived. The question is: how does self-consciousness emerge?

Honneth appropriates Mead's pragmatist-behaviourist answer to this question:

"I can become aware of what my gesture signifies for the other only by producing the other's reply in myself." [p. 73]

So that:

"In perceiving one's own vocal gesture and reacting to myself as my counterpart does, I take on a decentred perspective, from which I can form an image of myself and thereby come to a consciousness of my identity ... individuals can only become conscious of themselves in the object-position." [p. 74]

Thus Mead's well-known contrast between 'I' and 'me':

"Mead thus distinguishes between the 'me' — which, since it only reflects the other's image of me, only preserves my momentary activity as something already past — from the 'I', which represents the unregimented source of all my current actions. ... In its spontaneous activity ... 'I' not only precedes the consciousness that one has of oneself ... but also constantly refers back to the behavioural expressions contained consciously within the 'me' and comments on them. In the individual's personality, there is a relationship between the 'I' and the 'me' comparable to the relationship between two partners to dialogue ... a subject can only acquire a consciousness of itself to the extent to which it learns to perceive its own action from the symbolically represented second-person perspective. ... without the experience of having an interaction partner react, one would not be in a position to influence oneself — with the help of utterances that one can perceive oneself — so as to learn to understand one's reactions as something produced by one's own person." [p. 74-75]

Vygotsky and his associates were able to confirm that vocalisations are an integral component in the way in which youngsters learn to control their own behaviour, and a way comparable to the way that communities coordinate their activity by means of symbols, rituals and language. The transitory phenomenon of "egocentric speech" demonstrates that speech is not used initially as a means for one subject to communicate with another, but rather as a means for a subject to coordinate their own behaviour, at a stage of development when their 'me' is not yet fully differentiated from the whole field of perception and their 'I' has not yet emerged to view.

Honneth draws attention to the fact that the 'me' as the "internalisation of norms of action that result from a generalisation of the expectations of all members of society ... 'the generalised other,'" substantiates the stage of development of subjects of recognition of themselves and their partners to interaction as legal subjects possessing the same rights, but does not yet substantiate the emergence of individuality, in which a subject recognises themselves and others as having unique and differentiated value and identity. For Mead this stage is characterised by the increasing but never-completed recognition of the 'I' which always lies beyond perception, but forever intervenes into and disturbs interactive activity with its impulses and demands. Honneth draws out this distinction as it emerges in child development through the move from "role-playing" games to "competitive" games:

"In the stage of role-taking play, the child communicates with himself or herself by imitating the behaviour of a concrete partner to interaction, in order then to react in a complementary manner in his or her own action. By contrast, the second stage — that of the competitive game — requires the maturing child to represent the action-expectations of all of his or her playmates, in order to be able to perceive his or her own role within the functionally organised action-context." [p. 77]

These games perform not only a cognitive role but a crucial role in the development of moral personality, in which the young person learns to act according to societal rules and develop their personality in activity with others.

Honneth sees in the development of the 'I', a driving force for social change, as new demands emerge from within a subject, pressuring social norms to be adapted to satisfy its unique demands. Since the satisfaction of such demands is counterfactual, the subject must be able to "visualise" an ideal community in which its demands are satisfied and in which it is able to coordinate its activity with other subjects. Such an ideal plays an analogous role in social development as does play in the development of a child; the ideal emerges through the activity of a social subject according to counterfactual ethical precepts.

Honneth parts company with Mead on Mead's conceptualisation of the path by which individualism may emerge in modern society. Mead looks to the functional division of labour as providing the basis for someone to become conscious of their own unique contribution to the community. However Honneth points out that the production of any functional part of social labour is still always determined by the value-system of the whole — the "common good" or "market values", and therefore, the functional division of labour cannot be the site of counterfactual systems of values which could become an engine of social change and increasing individuation.

Honneth does see the orientation towards shared goals and values that Mead is concerned with in the focus upon the functional division of labour, however, as providing a "motivating experiential nexus" to underpin the development

of solidarity — the third stage of recognition which according to Honneth:

“For Hegel ... represents a synthesis of both preceding types of recognition, since it shares with ‘law’ the cognitive point of view associated with universally equal treatment, but shares with ‘love’ the aspect of emotional attachment that arises when love has been refined, under the cognitive impress of the law, into universal solidarity among members of a community. [p. 91]

My problem with this appropriation is that it picks up Mead/Dewey’s pragmatist/behaviourist epistemology along with the naturalistic formulation of Hegel’s speculative insight. Both pragmatism and behaviourism, in their time, made significant contributions to the clarification of concepts of human action and epistemology, both characteristic of the development of the American bourgeoisie. But they both suffer from defects which the Soviet scientists were in a position to transcend. Neither current of course witnessed the flourishing of social movements which enriched social life in the post-World War Two period, until the Soviet and American currents reconnected in the 1980s.

Mead’s image of the pre-conscious subject remains that of an autonomous actor. His behaviourism is useful in shedding light on how a pre-conscious subject develops conditioned reflexes associating their own action-impulses with sense-impressions deriving from both their own vocalisations and the reactions of those around them, but combined with the lack of an experimental program to further probe the process by which self-consciousness emerges in a child, behaviourism blocks the way to a conception of the construction of a self-consciousness as such, since for behaviourism, the ‘ego’ is forever out of sight and metaphysical.

The research of the Soviet activity theorists brought out the important insight that self-consciousness is inextricably tied up with collaborative activity engaging a subject with those around it, something quite distinct from communication between a subject and its partners. Communication arises only later.

The most vital and pervasive activity in which relations to other human beings first arises for the child is the securing of the assistance of adults in their actions. To adult eyes, the child’s gestures and later, the associated vocalisations, appear to be signals, forms of communication, but in respect to the child who has not yet distinguished between themselves and other people, “communication” is a misnomer. Before the child realises that the world is populated by things, and that the things have names, the words the child utters in her efforts to grasp the thing and satisfy her wants are more like the handles with which things are grasped. In other words, at the very root of the formation of consciousness is collaboration with other people, specifically the adults in their immediate circle.

Mead’s behaviourist observation of the sensuous association of the sound of the child’s own voice along with the sensor-motor activity and the sensuous perception of significant others, reinforcing and conditioning the association of all these actions together in the child’s embryonic psyche, is undoubtedly a valid observation, experimentally confirmed by the Soviet scientists.

Likewise in the social sphere, I would contend that it is not in the communication of a person with another, whether you call that other a “partner to interaction” or “partner in communication”, but rather at first the practical collaboration with others that it at the root of the development of social self-consciousness.

When Marx remarks that “it is with man as with commodities” [note 19 to Chapter One of Capital] and goes on to allude to Hegel’s concept of recognition: “Since he comes into the world neither with a looking glass in his hand, nor as a Fichtean philosopher, to whom ‘I am I’ is sufficient, man first sees and recognises himself in other men. Peter only establishes his own identity as a man by first comparing himself with Paul as being of like kind. And thereby Paul, just as he stands in his Pauline personality, becomes to Peter the type of the genus homo,” Marx clearly has in mind the development of civil society on the basis of commodity production.

Play

I think the first thing to acknowledge about play is that play is an historically constructed activity; play as observed by Mead and Vygotsky in the early 20th century is not like play found in pre-modern times nor like the play of children of the current generation. If we treat play as something eternal, then it does not provide “empirical backing”, but rather speculative philosophy in the unconscious guise of empirical data.

According to Vygotsky, play arises in the activity of the child initially as a means of dealing with desires that cannot

be immediately satisfied. As a result of play, the child develops a capacity for imagination:

“The old adage that children’s play is imagination in action can be reversed: we can say that imagination in adolescents and schoolchildren is play without action.” [Play and its Role in the Mental Development of the Child, Vygotsky 1933]

In a very young child, according to Vygotsky, there is such an intimate fusion between word and object, and between meaning and what is seen, that a divergence between the meaning field and the visible field is impossible, and “things” have a motivating force in respect to a very young child’s actions and determine the child’s behaviour. Further, young children are “moral realists” in that they cannot distinguish between what is “possible” and what is “allowed”. Play is a transitional stage in which things lose the motivating force that they have for her as a very young child; the child sees one thing but acts differently in relation to what she sees. At first, the child cannot yet sever thought from object; she must have something to act as a pivot and a stick for example may be used as a focus for imaginative behaviour in lieu of a real horse — meaning is freed from the object with which it was directly fused before, and not only freed, but becomes the predominant determinant of action. In the earliest play, the imaginary situation is only slightly separated from reality, and a child may ‘play’ at doing exactly what they have to do, they may ‘play’ at doing things which would otherwise be difficult or unpleasant for them. Later on the gap between the real and the imagined situation widens. In this transitional stage, the child still needs a “pivot” for the separation of meaning and object, and actually gains enjoyment from doing this. In all cases, play enables the child to ‘act above their age’, doing things which they are unable to do ‘in reality’, and in this way prepare themselves for doing them in reality.

The free adoption of rules in a play situation with other children and adults, gives the child for the first time a possibility to distinguish between moral (voluntary) and ‘instrumental’ (determinant) constraints.

Vygotsky says of role-playing play:

“play gives the child a new form of desires, i.e., teaches him to desire by relating his desires to a fictitious “I” - to his role in the game and its rules. Therefore, a child’s greatest achievements are possible in play - achievements that tomorrow will become his average level of real action and his morality.” [ibid.]

According to Vygotsky, play is the leading factor in the development of a child, even though it is the subordinate part in the life of the child, which is generally oriented to real situations, and while in the early stages of development of play it is the imaginary situation which predominates, in the later stages it is the game’s rules which predominate.

Play is always purposeful, but as play develops the imaginative more and more outweighs the real, and rules become more and more exacting, and the constraints to correctly fulfil one’s role in a game passes over to the aim of winning a game, and finally to the setting of records, a feature of adult games, in each case the successful achievement of the game’s purpose is always a source of pleasure, predominating over the suffering which may be entailed in physical exertion, self-restraint, risk of failure and so on.

According to Daniil Elkonin, children’s role-playing games are themselves an historical product; in times when production was carried out within a family context and no specialised system of education was required, children simply participated in the productive life of the family up to the limits of their own capacities. Correspondingly, the earliest stages of development of play in a young child are barely distinguishable from reality, taking its cue from the immediate challenges, just as the play-fighting of young lion cubs cannot be deemed to be “role playing games” as the cubs are not exercising any degree of imagination in their activity. In a world with a highly developed division of labour, symbolic activity, tools, etc., it is quite beyond a youngster to emulate, far less participate in the activity of the adults. The child’s desire to collaborate in the productive social activity around it is therefore frustrated, and imaginative situation play enters this void. This imaginative play is as deadly necessary and enjoyable as the wrestling of lion cubs, but its key feature is the “suspension of disbelief.”

I am not aware of any evidence that role-taking play involves, as Honneth claims, children imitating the activity of their partner to interaction.

“In the stage of role-taking play, the child communicates with himself or herself by imitating the behaviour of a concrete

partner to interaction, in order then to react in a complementary manner in his or her own action. By contrast, the second stage — that of the competitive game — requires the maturing child to represent the action-expectations of all of his or her playmates, in order to be able to perceive his or her own role with the functionally organised action-context.” [p. 77]

I suspect that this stage of symmetrical imitative play is a construction on Mead's part in order to substantiate his 'me'-hypothesis. In any event, play may not even involve another human partner to interaction, but may instead involve the autonomous use of an artefact. At the very earliest stages of play, typically the child adopts their own role and 'plays' themselves in a role play with their real partner to interaction.

When you think about it, the 'me'-hypothesis, though engaging and with a big grain of truth in it, is not strictly feasible. Mead says, according to Honneth, that one can “call up in oneself the meaning that one's action has for others.” But this is not true. The reactions of others as perceived by the subject are complementary and not identical to the perception and internal reaction of the others which can only be inferred. The sensori-motor perception of the subject of its own activity which is associated with the audio-visual perception of the reaction of others is something quite distinct from those of the subject's partners to interaction. On the other hand, Honneth needs this construction to substantiate the 'analogy' of rights-based recognition with symmetrical role-taking play and give him the 'empirical backing' he is looking for.

According to Vygotsky, there is an intermediate stage in the development of play called “rule-based” play, in which the imaginary 'situation' underlying role-taking play is formalised and abstracted into the rules-of-the-game, and the role of artefacts in mediating the activity of players by “standing for” real things has given way to formal rules. These rules frequently have their historical origins in role-playing (e.g. chess from war-games) but these have been lost in time. The competitive side of the game develops, but in its beginning, the rule-based play is just a development of role-taking in which the behaviour required by each player is given not by the hypothetical situation but by formal rules. Athletic competition is the highest stage. Here the player competes not only against the other participants but in setting records and so on, competes in an historically articulated social practice which is real in every sense and may become literally professional. Vygotsky is also at pains to emphasise the distinct roles of role-taking and rule-based games in the development of the child.

It is understandable the role-taking play was such a significant part of children's play during an era when a child's life-world was populated by the local grocer, the policeman, doctor, as well as uncles and aunts, etc., etc.. But it is a very different world that surrounds the youngsters of today's modernity.

Since World War Two, there have been three significant developments in play flowing out of the developments in the labour process: (i) the childhood of baby-boomers which corresponded to them being a new market for mass production of toys, (ii) the emergence of television as the ubiquitous childminder and (iii) the development of video games and in particular the current generation of “character-building” games. According to Jay Lemke, young researchers entering the field are the first generation of those who were themselves raised on video games.

Research on the nature and impact of play under the impact of these changes is only in its infancy. Worthy of mention however are firstly that television has brought about a flourishing of “autonomous role-taking play” among children, where children autonomously act out roles adopted from fictional or celebrity characters on the TV, and secondly, the dungeons-and-dragons-type games which are currently popular among young children, in which the players build the characters they are going to play, adding clothing, physique, weapons, personality, qualities, powers and aims to the character. This activity of constructing the character one is to play in the game may be as engaging as playing the game itself or even more so. In an age when young people are told that they will have to invent their own biography, where they are told that the job they will do does not probably yet exist, the popularity of such games is truly remarkable!

According to Jim Gee [Gee, J. P. What video games have to teach us about learning and literacy, 2003], video games players adopt three distinct roles when playing a game: “real”, “virtual” and “projective”.

If play is subject to historical change, then we have to be careful not to elevate passing phases in the historical development of play into a metaphysical status. I think that the observations quoted from Vygotsky above, about the broad developmental role of play remain valid, but in a more detailed examination of different forms of play, we must consider them as part of an historically developed adult culture. In general play-activity and the various kinds of

artefacts that function as “toys”, mediate between what the child is able to do at any given stage in its development, and what the child needs to do later in life.

It would seem to me though, that play does always require some form of external, mediating object to facilitate the development of imagination; and imagination, the ability to separate meaning from the immediate objects of perception and build new forms of activity around newly acquired meanings, is essential to the development of the human personality. Play does not necessarily involve using other people as the mediating object however. Play with others clearly plays a crucial role in moral development however, but not necessarily an exclusive role.

The Facade. (2012-03-30 09:50)

Ah, capitalism. You buy shit and nobody comments on your Youtube. They say they will here, yet they won't. Bitches. Facade is a superficial appearance or illusion of something. This guy said he was on Youtube taping his band. Who knows if he lied? This whole conversation was a facade. When I return, my bets new people will put out more facades. It wasn't a real conversation, A FAKE ONE!

Yeah, career professionals tell me that Carrabu Coffee is a great place to make friends, yet they lie through their teeth. If all Carrabu Coffees are like this, you'd think that becoming Canadian is a real advancement. Canadians don't have these silly problems.

If this continues, I'll have no problem cussing at them if I ever see them.

When PS4 comes out, the 7670 GPU will be one generation obsolete. The AMD R8000 will be out. I won't have to pay \$50 or \$60 for DirectX9-like quality which is long overdue. Those people that say graphics quality doesn't matter hate capitalism already. They want the 40,000 Youtube hits to be the NES, SNES, Genesis collections and have certain guarantees not unlike the 1968 Ford Mustangs and other classic cars. Generation Y believes that only owning a large quality of 8-bit/16-bit videogames bring success. We'll see whose right.

SNES games I need to get (2012-04-08 13:12)

4. Final Fantasy 2

Getting closer to the Number 1 spot, we have Final Fantasy 2 in at number 4. It was developed by Square (Now Square Enix) and released in 1991. I can't even begin to think of how many hours I spent on this game as a kid. Countless. I loved everything there was about this game.

3. Lufia II: Rise of the Sinistrals

Lufia was developed by Neverland and published in Japan in 1995, by Taito. Lufia 2 is a straight up RPG, however it has many puzzle elements incorporated in the various dungeons you explore. You acquire a bunch of items like a bow and arrow and bomb to name a few, which can be used to help you overcome certain obstacles in dungeons.

2. Final Fantasy III

The game was released to critical acclaim and is regarded as a true landmark in the Final Fantasy Series.

1. Chrono Trigger

It follows a group of people that are traveling through time in order to prevent the cause of a major catastrophe. I don't know what to say that has not already been said about Chrono Trigger. It surely is a masterpiece, so well done and very unique. From the battle system, to the load of sidequests that reveal a lot about the characters and their pasts, to the badass that was Magus and to that fact that you had multiple endings, all signs point towards a win.

Owns Sopranos complete series (2012-04-09 16:23)

Yeah, I liked the Godfather parts 1 and 2 so I got it at a good price at \$60. I bought my boxset today off E-bay. It is one of the highest IMDB series, just below 'The Wire' in score and tied with Breaking Bad (AMC channel series). Hopefully I can make friends by watching some of this series.

Bought Chrono Trigger, Final Fantasy III and Xenoblade Chronicles (2012-04-09 17:07)

I know I bought Final Fantasy III and Chrono Trigger for PS1 in 2001! Then I got Final Fantasy III for DS in 2008, and Chrono Trigger for DS in 2011. I own the SNES carts so it would look great on my Youtube slideshows. I know the European gamers were showing off their rare games and Final Fantasy III, Chrono Trigger, Panzer Dragoon Saga (now owns), Guardian Heroes (now owns). I also bought Ogre Battle for PS1 now. I remember playing the Chrono Trigger rom in 1999. My cousins with a SNES never owned Chrono Trigger or Final Fantasy III. In America, Chrono Trigger is the best RPG for SNES, yet in Europe, Final Fantasy III takes Chrono Trigger's throne. I think that Chrono Trigger has 60 hours of gameplay and 12 endings.

Xenoblade Chronicles for Wii might be rare someday with a limited run. This game surpasses Monster Hunter Tri in role playing complexity and also length. It's like a Final Fantasy X.

I heard that Disgaea DS and Disgaea: Afternoon of Darkness, both ports of Disgaea Hour of Darkness for PS2 are one of the deepest strategy RPGs for the older handhelds. I bought those two plus Disgaea 2 Dark Hero Days. All somewhat rare PSP games. Disgaea 3 is coming out on April 18th.

Sega Genesis games I have to get someday (2012-04-14 12:48)

1. Musha - The most expensive NTSC videogame on either SNES or Genesis on Earth with a price tag of \$250 on ebay, because you cannot find this off Amazon. It's a SHMUP made by Compile? It is Panzer Dragoon Saga's equal. You could find rarer, more expensive Neo Geo AES games with \$400 price tags.

The screenshot everybody remembers only seen in emulators, because owning Musha was nonexistent.

2. Phantasy Star IV - everybody has Phantasy Star IV except me. It's Genesis's best RPG. It was played by many Genesis owners and it isn't even rare

3. Lightning Force - a nice shoot em up

4. Shining Force 2

5. Shining Force

6. Castlevania Bloodlines

SHMUPS Episode V Metallic Uniframe Super Hybrid Armor (2012-04-15 14:53)

X

IFRAME: http://archive.org/embed/MUSHA_407

Off Ebay. Metallic Uniframe Super Hybrid Armor may surpass Lightning Force in Gameplay. I think I played the Musha rom dozen times so I'm pretty sure it would.

I also bought some other Genesis games.

- Phantasy Star IV
- Castlevania Bloodlines
- Shining Force II
- Lightning Force
- One SNES game
- Final Fantasy II

The PF Firewall in PC-BSD beats Linux (2012-04-20 05:48)

"Summary: OpenBSD is quite possibly the most secure operating system on the planet. Every step of the development process focuses on building a secure, open, and free platform. UNIX® and Linux® administrators take note: Without realizing it, you probably use tools ported from OpenBSD every day. Maybe it's time to give the whole operating system a closer look...In fact, OpenBSD is so secure that it was once banned for use in a DEF CON competition, where crackers go after each other's systems..." – IBM.com circa 2006

Source

"OpenBSD is often noted for its code auditing and integrated crypto, but the security features go far beyond this. OpenBSD was built from the ground up on the model of being a fabric woven with security in mind, not a patchwork of bug fixes and security updates. **This has led to OpenBSD finally being recognized today for what it is: the most secure operating system on earth.**

Source

"Whether you buy that theory or not, experts agree that OpenBSD is the most secure server operating system now available. "

Source

"Chris McNab, network security analyst at MIS Corporate Defence thinks that OpenBSD "is the most secure operating system available". He said that the security comes from the fact that "it is based on NetBSD, but open source developers have gone through it and audited it, working proactively. So rather than waiting for a security hole they're already looking for one. This has made OpenBSD the most secure Unix variant out there".

Source

"OpenBSD is a free unix-like operating system. It comes "secure by default" out of the box. It CAN be *the* most secure operating system, but of course that is absolutely dependent on who administers it, and how vigilant they are in protecting it. In the right hands, I consider it to be THE MOST SECURE OPERATING SYSTEM."

Source

"OpenBSD is considered by many to be one of the most secure operating systems in existence. From its inception, OpenBSD has focused on making BSD as secure as possible."

Source

"OpenBSD is universally acknowledged to be the most secure operating system available today, miles ahead of Windows, Linux and other operating systems with its security features, making it the clear choice for any high-security application."

JXD S601 (2012-04-20 21:18)

I have more than one GP2X Caanoo for NES, SNES, Genesis, Neo-Geo, GBA, Turbo-Grafx emulation. My favorite is GBA.

JXD makes an inexpensive Android handheld based on 2.6.35 Linux kernel (

Aug 1, 2010)

for old 8-bit, 16-bit, N64, PS1, and Saturn emulators. It's got 512 MB of RAM and a 1 GHz RISC CPU. It plays JPEG and all the image formats. It has 802.11. The \$120 model has a better touch screen for touch screen games.

I admit there is no Android 3.0 or Android 4.0 game handheld with newer Linux kernels on Ebay.

Caanoo can do this with 2.6.24 kernel (24 January 2008) . Caanoo kernel is as old as openSUSE Linux 10.3.

Dragon Force, Valkyrie Profile, Shining Force CD (2012-04-23 13:23)

I finally bought **Dragon Force** for Sega Saturn, probably Sega Saturn's 5th highest rated NTSC game after Panzer DRagoon Saga, Panzer Dragoon, Panzer Dragoon 2 Zwei, and Nights into Dreams. It's a Strategy RPG.

I also bought my first Sega CD game called **Shining Force CD** which got a 90 % on many Sega Genesis sites like Sega-16.com, Shin-Force. Shining Force CD is the best Sega CD RPG. I have Lunar - Silver Star Story for PSP and PS1, and Lunar 2 Eternal Blue for PS1. I still have to fund Popful Mail for Sega CD. This game was also rated high.

Then I bought **Valkyrie Profile** for cheap (\$75) perhaps the popularity died down. I already had it for PSP3000, and now PS1. I know there is a 3rd one on Dual Screen, yet I am waiting for a PS3 version to come out. It's on a lot of PS1 RPG lists. I saw it at a local thrift store for \$100 eight years ago.

I own one of the rarest JRPGs for Dual Screen called **Radiant Historia** . It's a JRPG with a nice game site score of 8.5 out of 10. It has time travel and plays like Chrono Trigger.

August Wii U impressions II - Ellen drives sales? (2012-04-24 03:22)

Lets start off by saying that E3 2012 was there for the taking if Nintendo wanted it. When I parallel the word history with Nintendo, for me and many others immediately fond memories are invoked in the form of childhood experiences that drew upon new possibilities. Did Nintendo drop a price point? No. Did Nintendo explain their online strategy? No. Did Nintendo reveal a release date? No. Did Nintendo show off really any triple-A products for launch? No. Did Nintendo drop a price point? No. Nintendo has given everyone the opportunity to create something special, and really it comes down to the talented developers and their creativity to define the Wii Us future.

Most of those people dont care about release dates and price points six months in advance. They will start to worry about it when EllenDeGeneres starts giving them away like gangbusters this holiday. That is their market, and that is their direction.

. What is the world coming too?

I miss that popup screen seen in Linux Mint 11 where I can download Broadcom WiFi firmware under unrecognized firmware on the taskbar. Linux Mint 13 Ubuntu is due out in May 2012. The login username for this LiveDVD is "mint". I tried Debian distros before in 2004, but Debian was secretly under the name Knoppix 3.3 instead. I know now that I have to stay with the regular Linux Mint s for this laptop. My Linux Mint 12 DVD crashes in install mode. I have to wait for Linux Mint 13. Linux Mint Debian Edition XFCE 201204 is an okay operating system, yet Linux Mint 11 is a lot superior with working WiFi drivers and just as stable. Firefox 11 didn't time out during surfing (with RJ-45) in Linux Mint Debian Edition XFCE 201204. Overall: C+

Romney against police states (2012-04-25 06:08)

Vanguard parties are illegal as outlawed by the US constitution. Obamacare mandate is unconstitutional. I vote for Romney in November and Nov. 2016.

The Easter Island Scenario (2012-04-27 15:15)

Scientists now say due to people going hungry on Easter Island with those strange heads in it will be a preview of what human civilization will be like as little as 100 years.

As an American, I will always be unpopular (2012-04-28 20:00)

If I was in the UK commonwealth, I would have been cool and popular by now. I would have had over 100 more blogspot, Facebook and Youtube comments. Since I do live in this creepy land called America, I get none. Canada is a hundred times better for online activities. Say if I was a Democrat for the rest of my life, would that change this insanity? Probably not. I realize that everybody's more talented with more comments than me. I realize living this country is the problem. I could blame myself for a lot of things. No friends. No facebook comments. Offline is where I talk to myself (who else is there?! I gotta change this and move to Canada or Australia for a nice stream of comments! Now, other Americans have friends, because have financial freedom or they have that kind of charisma. They have much more talent. I am forced to say that I am talented when **I am really not talented at all**. Everybody want me to be talented offline, but I know I would have to be Canadian to be talented. Canadians are more talented. These Americans have to keep me unpopular online to force me to be talented offline with a bad life; therefore, I am still untalented and unhappy here. The Canadian society doesn't have the same GDP as America so I could get away with a lot more popularity online. To sum it up, as long as I live in America, I'll continue to be unpopular! A nice commonwealth country like Canada or Australia is the solution ultimately.

RIP PC Games: PC gaming rig is the Amiga? Maybe (2012-05-01 00:48)

I got the bad news today at a local GameStop. Even though Diablo 3 and Guild Wars 2 are coming out for PC on DVD boxset, most PC Publishers are moving towards downloads (iso images). The DVD media and case may be in the past. Consoles will remain the platform of choice. Even though videocards contributed to this, the Gamespot clerk said they want to use their PC for only web surfing. In the next year or so, PC games will look like the Commodore Amiga 4000 looks like in 1998...kind of dead or last stage of dieing.

Perhaps Wii U, Xbox 720 and Playstation 4 will put the final nail in the computer gaming. Diablo 3, World of Warcraft and Guild Wars 2 will be the last popular games on PC according to the Gamestop clerk.

The handheld platforms like 3DS feel like the early 1990s. The Playstation Vita appears to be acting as a Sega Game Gear lagging far behind the Gameboy. Gamepark Corporation felt that the GP2x Caanoo is their last handheld.

My ex-friends have stopped playing Everquest 2 and World of Warcraft in late 2008 to show that PC gaming is really dieing. He ended with a Radeon HD X1600 in his PC in 2008.

Profile People! (2012-05-01 14:04)

Top 10 baseball stadiums (2012-05-04 21:28)

Nothing says America better than baseball! Get a hot dog and beer and you're ready to go.

Wrigley Field Home of the Chicago Cubs

1. Wrigley Field, Chicago Cubs According to Obama in an interview with ESPN's Stuart Scott, Wrigley Field is all about beer and beautiful people who aren't serious about baseball. Prove Obama wrong and go to Wrigley Field to seriously watch a Cubs game.

Fenway Park Photo by charliekwalker@flickr

2. Fenway Park, Boston Red Sox "America's most beloved ballpark," Fenway Park is truly a classic. It's much the same as it was the day it opened on April 20, 1912. Go see what the Green Monster is all about, and why it's so difficult to make a home run.

The New Yankee Stadium

3. Yankee Stadium, New York Yankees The new Yankee Stadium, just north of the original in the Bronx, will open on April 3 and 4, for an exhibition game against the Chicago Cubs. No longer will Yankee Stadium be referred to as "The House that Ruth Built."

Waiting for a home run in McCovey Cove at AT &T Park

4. AT &T Park, San Francisco Giants It may be owned by AT &T but fans still call it Pac Bell Park. Watch Portuguese water dogs fetch home runs as they splash into McCovey Cove. And who is that pitching for the Giants? Why, it's 45-year-old Randy Johnson, still throwing fastballs up to 95 mph.

Chase Field Home of the Arizona Diamondbacks

5. Chase Field, Arizona Diamondbacks Where but in Arizona can you have a pool party at a major league baseball park? Reserve the Ridenow Powersports Pool suite which includes a private bar and plasma TV. pool rental comes with 35 game tickets, five parking passes, a beach towel and baseball cap for each guest.

The pristine Safeco Field in Seattle

6. Safeco Field, Seattle Mariners The Kid is back! Seattleites are enthusiastically welcoming the return of Ken Griffey, Jr. And you don't have to worry about wind, rain, or snow when you go to Safeco Field in Seattle. The one-of-a-kind retractable roof covers the ballpark without enclosing it.

PETCO Park with spring flowers

7. PETCO Park, San Diego Padres Location, location, location—that's the beauty of PETCO Park. Panoramic views of San Diego Bay can distract you from the game. And when the last out is made, the Gaslamp Quarter is right there with its huge selection of restaurants and pulsating nightlife.

Oriole fans in Baltimore

8. Oriole Park at Camden Yards, Baltimore Orioles See the Orioles for free on your birthday. The Orioles are giving away tickets to fans during their birthday months—with the exception of the Yankees and Red Sox games. The season starts on April 6 at home against the Yankees. No freebies that day!

PNC Park and the Pittsburgh Skyline

9. PNC Park, Pittsburgh Pirates Sitting alongside the Allegheny River, PNC Park has sweeping vistas of the downtown skyline and the riverfront. The Pirates have been Pittsburgh's team for 115 years. That's reason enough for celebration.

Activities around Coors Field

10. Coors Field, Colorado Rockies Did you know that at the mile-high Coors Field the ball travels nine percent farther than at sea level? The row of purple seats twenty rows up on the upper deck and six rows from the top is exactly one-mile above sea level. Watch the Colorado Rockies play with a view of their namesake mountains in the background.

Top 10 NFL stadiums (2012-05-04 21:36)

1. Dallas Cowboys New Stadium, Arlington. This site will open for the Dallas Cowboys in the fall of 2009 and it has already won the rights to the Super Bowl in 2011. Set to be a modern-day coliseum, this venue has everything including a retractable roof, the largest high definition screen in the world at the 50-yard line and glass doors that open behind each end zone.

2. University of Phoenix Stadium, Phoenix. The Cardinals had their first season at this palace in 2008 and it must have helped them out. Big and beautiful, this new stadium has climate control and a field that is brought in on an incredible tray system that was designed specifically for them. Before each game and after the field can be rolled in and out so that the grass can grow and so that the venue can host events that require a hard floor without damaging the playing surface! Amazing.

3. Lambeau Field, Green Bay. Not new like the other Megaplex stadiums but endowed with the great ghosts of football past, the field is a testament to fan support. A small town supporting a major team is unheard of and also makes this a refreshing break from the corporate gatherings hosted by other NFL stops. Great tailgating and memories of Vince Lombardi abound. The field and stadium are still wonderful with great views of the icy tundra all around.

4. Raymond James Stadium, Tampa Bay. Arrrgh, matey! When they redesigned this stadium in 1998 for the Buccaneers, they went all out with the pirate theme. A 103-foot pirate ship replica is on site so that fans can play in the entertainment park, Buccaneer's Cove. The Cove also has a fishing village replica and a ton of vending areas made to look like beach huts. If you attend a game when the Bucs score a TD, they have 8 cannons fire at the same time. Of course, it has 195 luxury suites and all that but the theme park fun is what sets it apart.

5. Qwest Field, Seattle. Espresso, rain and football? These elements all come together in the Seahawk's stadium. Perched right downtown among the buildings, the south end of the end zone opens up to views of the skyline and Mt. Rainier. The whole thing has an awesome open field with acoustics designed to funnel sound down to the field and mess up the opposing teams. When the rain comes, the screens direct it away from fans so they can sip coffee in comfort.

6. Heinz Field, Pittsburgh. The Steelers new home was built not far from the legendary Three Rivers Stadium but this all new home has the plush comforts of the new stadium with all of the hard-core fans from the old venue. What a great mix.

7. Invesco Field, Denver. After having such success in the Mile High Stadium, fans were leery of this new joint in the sports complex next to the Pepsi Center and Coors Field. Invesco Field though won them over. It still has a reference to the old stadium in the name and was built the exact same size: just more luxury boxes and a grade A facility.

8. Lucas Oil Stadium, Indianapolis. Once the team became champs they moved into this new modern stadium in 2008. The outside has a brick and steel facade that suggests the old era but this stadium is all modern inside. Built 25-feet below street level for easy seat access for fans, the 63,000 who gather each week to watch their team do so in style.

9. M & T Bank Stadium, Baltimore. Built to look like Camden Yards, its baseball neighbor, M & T Bank Stadium features 2 massive scoreboards and seating for 71,000 each week along with the super-cool Astroturf with those little rubber balls.

10. Jacksonville Municipal Stadium, Jacksonville. Built on the sacred ground of the old Gator Bowl, this stadium launched back in 1995 but was heavily upgraded to host the SuperBowl in 2005.

Method of Loci (2012-05-05 19:27)

The Method of Loci or Method of Place is perhaps the oldest mnemonic device. It was used by the Greeks in 500 B.C. It is based on mentally positioning things-to-remember in a well-known room. Use the Method of Loci by trying the following: 1. Imagine a very familiar place, such as a well-known street, building or room, which has many distinctive locations. Imagine yourself walking through, for example, this room, carefully examining each location. For example, imagine walking in the door, turning right, seeing the bookcase, walking to the bookcase, looking at it, walking past it to the fireplace, looking in the fireplace, etc... Now, make up a vivid, concrete list of everything that you need to remember. For example, the five things that you need to buy for a birthday party (e.g. cake, candles, balloons, present and music). Associate each item with a location in the room. Imagine it as vividly as you can. Walk through the room and look in each location, seeing the item where you placed it.

Dual Analogue Sticks on Wii U, finally (2012-05-06 03:02)

I think the latest Wii U revision where they have two analogue sticks near the top, is an improvement. Nintendo should copy dual shock and have the analogue sticks near the bottom. Didn't Nintendo take any hints from Sega Dreamcast and Xbox's controller S doesn't work. The controller is not that well designed with analogue sticks near the top. They should be smarter than this unless THEY WANT Wii U to fail. Dual Shock 2/3 is one hell of a controller, the best ever made. Nintendo is being STUPID!

Owns Terranigma (American version) (2012-05-06 16:42)

This SNES game is similar to Chrono Trigger (RPG, 10/10) and is a rare NTSC production like Secret of Mana 2 was. It got a 10/10 at Nintendolife and SNES.com. This RPG is the final game in the Soul Blazer trilogy. I remember there being some NTSC Star Ocean copies, but I own that SNES Star Ocean for Playstation Portable so it's less important.

This is what my copy of Terranigma looks like.

I am looking at buying a 8/10 Misadventures of Tron Bonne, a rare Playstation RPG in the next month or so. Tron Boone came from my other PS RPG, Megaman Legends II.

SALT method (2012-05-06 19:26)

· Use the SALT Method This is another useful method, which can be used any time you meet someone new. It can also be used along with the imagery techniques just described. Say the name aloud. Ask the person a question using his/her name. At Least once, use the name when talking. Terminate the conversation by using his/her name again. For example, when your friend Jim introduces you to Betty for the first time, this is what the conversation might sound like: Jim: This is Betty. You: Hello Betty, pleased to meet you. Betty: Pleased to meet you too. You: So, Betty, what brings to you Thunder Bay? Betty: Well, I am just down to do some camping..... (talk, talk, talk). You: That's so interesting, Betty, because I feel the way about that..... (talk, talk, talk). You: It was great meeting you Betty, good luck on your camping trip. Hope you don't see any bears!

Dragon Quest VI, Secret of Mana 2, Tales of Phantasia, Tactics Ogre (2012-05-08 19:32)

Guys, I bought some extremely rare JRPG SNES from a American Reproductions company that hacks cartridges with English patches. I bought four games 50 % less than I found them on Ebay. You can read the reviews off Nintendolife.com

- Dragon Quest VI
- **Secret of Mana 2** aka Seiken Densetsu 3
- **Terranigma** (sequel to Soul Blazer)
- **Tale of Phantasia**
- Tactics Ogre complete with case, manual for Playstation

I

almost bought Treasure Hunter G, but I did not. Next month maybe. I also found all the Dragon Quest games translated and put into American SNES carts for \$62 each. I saw Ogre Battle - March of the Black Queen for \$62.

Terranigma, Secret of Mana 2 (Seiken Densetsu 3 (SNES), and Dragon Quest VI all got a 10 out of 10. If they're around next month, I'll buy the other great Dragon Quest SNES games. This opportunity is a needle in the hay stack, Buy at least 2.

Just search Google for "SNES Reproductions" and you'll come to "Game Reproductions" with an alligator. I sold out and bought Tactics Ogre for Playstation, because I could get a black label box, manual, and CD for the around the same price I could find a Misadventure of Tron Bonnie (rarest North American PS1 game) CD in a generic case .

Bought Treasure Hunter G (US Ver) (2012-05-10 00:19)

I bought some more RPGs off Game Reproductions including Treasure Hunter G (Squaresoft RPG) . O Treasure Hunter G had some nice reviews (9/10, 10/10) on GameFAQs.

I own Dragon Quest IV, V, VI for Nintendo DS. I shouldn't buy the SNES Dragon Quest games this month if I already own Nintendo DS remakes.

Afganistan thoughts (2012-05-13 15:22)

The People's Republic of Afghanistan wasn't really a threat to the United States. the Soviets were there fighting against the rebels.

http://en.wikipedia.org/wiki/Communist_%28Maoist%29_Party_of_Afghanistan

This party should hold power in Afghanistan and then terrorism would decrease and be like 1980s People's Republic of Afghanistan. Its less expensive then the US Army in and around for two decades. Isarel is safe, because they're christian/Jewish. Muslim countries don't seem to make good democracies.

Letter from Governor Scott Walker (2012-05-15 00:29)

GOVERNOR SCOTT WALKER

May 14, 2012

Dear Ian,

Wisconsin has come a long way in the last year and we're getting our state out of the deep economic rut and back where we want to be.

But the Big Government Labor Unions are seized by an overpowering urge to return to the "Doyle Days" when too much spending, too much taxing, too much borrowing, and too much wasting was ruining our state.

**The Recall Election is set for June 5th.
Wisconsin can't afford to go backward.
Ian, I need your help to win.**

Our opponents are spending breathtaking amounts of money and launching poisonous TV attacks against me. Your generous help is urgently needed to rise to the challenge of fighting back with the truth.

Please write your "Friends of Scott Walker" contribution for \$25, \$50, \$100, \$250, \$500, \$1,000 or more and mail it back in the envelope enclosed.

It's an exciting challenge to turn Wisconsin around. The \$3.6 billion budget deficit is gone . . . We crashed that without raising taxes and, in fact, overall school property taxes have started to come down . . . Wisconsin is open for business and private sector jobs are coming back strong because employers have renewed faith and confidence in our state.

Wisconsin is growing again, but the Liberal Democrats want to take us back to the way things were when they had all the power and Madison bent to the will of Big Government Labor leaders in Washington and Chicago.

With clenched fists, obscene signs, screaming chants and un-Wisconsin-like tactics, I'm being attacked with a ferocity that Wisconsinites have never seen before.

Arrogant and hypocritical, the Madison Liberals have joined forces with the Out-of-State Union Bosses to make an example out of me for curbing their collective bargaining rights, insisting that they pay their fair share for their pensions and health care, and giving state employees a choice when it comes to union membership.

Over, please . . .

Page Two

They've got revenge on their minds. It's power they seek. And they'll spend upwards of \$40 million to get their way.

There is one thing we must do to keep Wisconsin going the right way: **WIN!**

By nearly every measure, our state is on the comeback trail: the Doyle deficit is gone . . . jobs are up . . . consumer and employer confidence is high . . . and businesses are coming back to Wisconsin, attracted by our newly hospitable climate.

But our opponents aren't interested in results . . . they want revenge.

Ian, I'm face-to-face with a recall election on June 5th that's only days away. There is no lie our enemies won't utter to win. But I don't have anything to hide. The facts are my friends. **The truth is on our side**

So let me ask you this:

Will the voters of Wisconsin believe the horrible things those attack ads say about me?
Do the people behind those lying ads know Wisconsin?
Are they even from Wisconsin?

Will you ponder those questions? And if you think I'm doing a good job . . . if you think that we've got Wisconsin turned around and heading the right way . . . and if you think the last people we need to clean up the mess we inherited from Governor Doyle are the same liberals that made the mess . . .

Will you send me your emergency help because we urgently need to raise **\$400,000** in the next **15 days**?

There's a contribution form and envelope addressed to our headquarters in Middleton enclosed with this letter. Please do me the honor of investing in our campaign for the fast-approaching recall election on June 5th.

Ian, your "Friends of Scott Walker" contribution for \$25, \$50, \$100, \$500, or whatever is right for you will mean the world to me.

On Wisconsin,

Scott Walker
Governor

P.S. No matter how loud the Big Government Union Bosses yell, we've got the truth on our side. Wisconsin is open for business. Wisconsinites believe in our state. Our clear-thinking, common sense and conservative policies are working. Today, I need your generous support to **keep moving Wisconsin forward!**

Diablo III Purchased at Wal-mart midnight Launch (2012-05-15 00:37)

I've bought Diablo 2 on the first day June 29, 2000 at Best Buy. I didn't meet anyone I knew. This was supposed to be \$50. I think there is four difficulties: Normal, Nightmare (Medium), Hell (Hard) and Inferno (Hardest). Some monster's purpose in this world was to be killed again and again in a Promethean cycle of life and death. These were the baddies (called Super Unique Monsters) who you encountered time and again in the randomly generated areas, over the course of multiple alts and difficulty playthroughs – and after a while, they started to grow on us. Slaying the pipsqueak goblin Rakanishu always made us chuckle, beating up the undead Corpsefire was always satisfying, and felling the fallen angel Izual was a must thanks to his epic backstory and primo quest reward (two additional skill points). My first character is going to be a barbarian. Diablo III's taking a different approach to exploration – as you roam around each level, there's a chance you'll stumble onto a completely random event. This is an excellent feature for giving players unique experiences and preventing boredom while leveling alts, but I worry that some monsters will never be killed by the Diablo's general public. Diablo III once included a similar parallel to Deckard's magic box, called the Nephalem Cube; instead of combining items, it would salvage them for crafting materials. As if to taunt our cherished Horadric memories, the new cube was removed when the D3 devs decided that return trips to town were necessary breaks for pacing the game's action I know this boss's lair like the back of our constantly-clicking hands. When players were first getting acquainted with the concept of farming loot, Mephisto was the go-to target – a boss that's less challenging to get to than Diablo and Baal, but who still had the chance to drop some choice gear. Plus, I totally destroyed his soulstone every chance I got – that's what Mephisto gets for looking at us funny. I won't claim to know what'll happen in Diablo III's story, but I've yet to see or hear any mention of Diablo's brothers – most likely because I killed them hundreds of times already. I won't miss having to traverse through his labyrinthine dungeon, but Diablo without Mephisto runs is like going to Disneyland and not riding Space Mountain. Whether you were new

to the game or bored of farming Baal, lowbie duels were an awesome way to blow off some steam and challenge your D2 buddies. Low-level PvP meant joining a game with some like-minded duelists, determining what level bracket your characters would fight at (I preferred level 9, 19, or 30 duels), then throwing down the gauntlet in some sporting, strictly-for-fun combat. Farming the best items no longer meant multiple Hell runs to get the perfect drop – instead, I would hope for awesome blues and greens that would just make the cut for our character’s level. Some of our fondest D2 memories stem from decking out our level 19 throwing-weapon Barbarian, Tomahawk, with some sick-nasty blue weapons and an inventory full of the ideal charms before pitting him against the pet projects of other fun-loving players. Throwing down outside the Rogue Encampment was always a sociable affair, and since the low levels were so easily obtained, you could try a new build or character class every week. LLDs were planted firmly on the “fun” end of the dueling spectrum; Playing on Hardcore mode was enough to separate the men from the mice: with death being permanent, players would clutch onto their characters as tightly as they would to their own real lives. But what really verified that you had cajones of pure steel was if you were willing to put all your invested time and effort on the line in winner-takes-all duels. It’s as close to the Wild West as you can get: prestige should you win, everlasting death should you lose. Having some Hardcore ears in your inventory (grisly trophies that could be picked up after a duel) was a sign that you were not to be trifled with – and probably had a belt full of Rejuvenation potions at all times. I know that D3 will include Hardcore mode, and that multiplayer Arenas are set to be the next evolution of dueling (even if they’re not present at launch) – but could these two intense flavors possibly go together? Blizzard might be wary of raising the stakes so high in this day and age, but it just wouldn’t feel like Diablo if diehard PvPers couldn’t put their life on the line. Diablo II turned us all into hoarders, with the bevy of dropped loot and plunder that each monster dropped – then it forced us to make difficult choices about what I wanted to keep. This was all thanks to the admittedly-clunky inventory system, which forced you to make room for items in your gridded backpack. Though it makes no logical sense to have to allocate equal amounts of space for a buckler and a pair of gloves, it makes it so that every discarded item makes the new piece of swag feel that much more significant. The best part was finally getting everything to fit just right: seeing your tomes, keys, potions, alternate set of gear, and charms all neatly lined up with just as satisfying as getting a four-line Tetris with a straight piece. Diablo III looks to have a similar inventory system – only now, town portals are a part of your UI, and larger items only occupy rectangular spaces. C’mon, Blizzard! Makes us work for those immaculately-organized backpacks! There was a time when gazing at an inventory full of Stone of Jordan rings felt like clutching a stack of hundred-dollar bills: the high life. Though the SoJ (as it’s commonly known) was merely a level-29-and-up ring, it had a fairly low drop rate with the alluring bonus of giving +1 to all your skills. When plain old gold was deemed near-worthless for trading, the D2 community devised its own form of currency: exchanging high-level items for SoJs by the bundle. We fondly remember fervently joining “Free SoJ” games where bored pros would litter the ground with SoJs like money raining down on a crowded street. Even though item duping and market flooding made players devalue the SoJ in favor of runes, I still remember it as Diablo’s main currency. Seeing this kind of player ingenuity in Diablo III would warm our hearts, but it looks like the big bad Auction House might put the kibosh on these kinds of fascinating movements in the game’s virtual market. As Avon Barksdale once said on HBO’s *The Wire*, “you only play at two levels in Diablo II: level 1, and level 99.” ...or something like that. Level 99 was the first step to “completing” the game; all that was really left to do was farm up your desired tier of gear, then feel accomplished and proud of yourself. Anything lower than 99, and you were still on your path to greatness, inching closer and closer to a level cap that was tough to hit even if you knew what you were doing. Diablo III’s level 60 cap makes us sad – it screams “Vanilla World of Warcraft,” and it lacks the “this close to triple digits” pizzazz of its Diablo II counterpart. Of course, most D2 players were satisfied hitting level 99 on one character, before trying out different builds or classes. But who really wants to experience the same hours of content over and over just to try each role? Rushing was experience gain boiled down to its raw essence; a science of gaining levels at lightspeed that makes the grinds of other games feel like eons. This process of power leveling was relatively simple. First, get a buddy (or hire a player in exchange for some items) to get on their high-level character – Paladin and Sorceress rushing was the most efficient. Next, have them escort you through every major boss so that you can get past the quest-based barriers that prevented you from playing at higher difficulties. Once you’re able to access Nightmare mode (or Hell, if you’re feeling lucky), it was simply a matter of tagging along with high-level groups and watching the carnage flood your experience bar. Sure, it probably wasn’t intended, but rushing made the experience of creating alts painless, and it actually promoted a healthy camaraderie between altruistic D2 vets and inexperienced greenhorns. Chances are

slim that Blizzard would allow such story-skipping exploits in Diablo III, so that probably means I won't get to see the Mecca of our character rushes... While runs through the Bloody Foothills and Travincal were great for farming, nothing approaches the lucrative XP gain of one of gaming's greatest (and weirdest) Easter eggs. What had been a rumored area in the first Diablo became a reality in the sequel, and if you were planning on leveling quickly, the Cow Level was an all-you-can-gain experience buffet. After transmuting a Tome of Town Portal and the seemingly-useless Wirt's Leg in the Horadric Cube, a curious red portal would open up; what waited on the other side was a quaint field covered in halberd-wielding bovines standing on their hind legs. Never before had I seen such glorious warrior beef. While I'm almost certain that The Secret Cow Level will get a nod in Diablo III, I'm equally certain that it won't be as lucrative a grinding area as it once was. Fingers crossed that I'll fight a ghostly / zombified / demon-spawn version of The Cow King – lord knows I never get tired of killing that lightning-enchanted fool. I know that runes are a returning for Diablo III, with five types that socket into abilities (instead of items) to modify them in varying ways. That's awesome – but I pine for the days when runes were mundane engraved stone that unlocked tremendous power when combined in the right sequence. For example, on their own, the Ort rune added some lightning damage, and the Sol rune buffed your physical damage – but when placed together into a two-socket helm, they produced the Lore runeword, providing +1 to all skills and some damage resistance. It's these cool combos that made runewords so appealing. Best of all, later patches added some truly insane runewords that let players try out abilities that weren't even a part of their class; the Ber-Tir-Um-Mal-Lum "Beast" runeword let Barbarians transform into bears just like Druids, and Assassins went nuts when the Fal-Ohm-Um "Chaos" let them use the Barb's iconic Whirlwind ability. From the looks of it, these crazy class-overlaps just won't be possible with the new rune system. For players who wanted to put their prowess to the test, Diablo II offered seasonal ladders similar to Warcraft or StarCraft – only, instead of tournament placements and special icons, the only thing you got for topping the ladder was pride. With each new season, the ladder was reset, so everyone was on the same playing field; to make things a little more interesting, monsters in ladder games were tougher but had the chance to drop Ladder Only items. Once the season was over, its ladders were set in stone, and a fresh season of competition would begin anew. It had the charming appeal of a Diablo Gold Rush, where everyone was excitedly competing to achieve fame and fortune the quickest. Another side effect of the seasonal ladders were that they threw the in-game economy in flux, where some items would have absurdly-high temporary value before dropping off completely. Because this would likely wreak havoc on Diablo III's cash-money Auction House, there's no way ladders will be in the game – a shame, since they let players new and old relive the excitement of a fresh start. Diablo III's looking mighty fine, striking the right balance between the colorful cartoony look of WoW and the dark, blood-stained atmosphere of the previous games. But there was something that was so right about Diablo II's janky look – which by today's standards resembles a cross between claymation and a Full Sail student's first project – presented in glorious 800x600 resolution. And the monster designs look so unlike anything else in Blizzard's flagship franchises: could you even imagine fighting the manic Fetish Shaman or the sickening Regurgitator in WoW? For all the goofiness of the character graphics, the items look like actual weapons and armor crafted in a medieval forge, instead of glittering, over-sized action figure accessories. It's a unique aesthetic that Diablo II perfected, and one that I'll sadly probably never see again from Blizzard – or any big-name company, for that matter. Those are the features that stick out the most in our memories – but if I missed something, let us know so I can get all nostalgic about it. Diablo III will no doubt consume our lives just as D2 did, but it's like they say: you can't go home again, even if you have a Scroll of Town Portal.

Dictatorial nature of videogame websites (2012-05-16 19:00)

I have been on videogame websites for twelve years. These modulators are very dictatorial on progress. If they don't like your avatar, mods can ban you like Julius Caesar gave thumbs down to gladiators he did not like in the Colosseum. Once, I was made popular, the videogame sites upgrade the website or ban me. The Giantbomb website I have been on didn't like my game selection or my amount of friends so they banned just for pleasure.

Apollo Alliance (2012-05-17 14:22)

In 2004, Joel Rogers from the Center On Wisconsin Strategy, Robert Borosage from the Institute for America's Future, and environmental visionary Dan Carol approached Steelworkers President Leo Gerard and SEIU President Andy Stern, among others, to propose a new alliance of labor, environmental groups, business and social justice leaders called the Apollo Alliance. The Alliance, which soon included over 200 supporting organizations, released a report that year arguing for a ten-year program of investment in a "clean energy, good jobs" economy.^[1]

The Apollo Alliance is a joint project of the Institute for America's Future and the Center on Wisconsin Strategy. The Apollo Alliance is a 501-c3 organization.^[2]

From Common Dreams.org, Apollo Alliance press release January 14, 2004.^[3]

An unusual alliance of labor, environmental, civil rights, business, and political leaders today laid out a vision for a "New Apollo Project" to create 3.3 million new jobs and achieve energy independence in ten years. Named after President Kennedy's moon program, which inspired a major national commitment to the aerospace industry, the Apollo Alliance aims to unify the country behind a ten-year program of strategic investment for clean energy technology and new infrastructure.

The Alliance also announced that it has received support from 17 of America's largest labor unions, including the United Auto Workers, the Steelworkers and Machinists, as well as a broad cross section of the environmental movement, including the Sierra Club, the NRDC, the Union of Concerned Scientists, and Greenpeace.

The press conference was held as President Bush is expected to make a final push for his energy agenda, which was defeated under widespread criticism last November. The press conference was attended by co-chairs of the Apollo

Alliance, Senator Maria Cantwell (by phone), Leo Gerard, president of the United Steelworkers of America, Carl Pope, executive director of the Sierra Club, as well as by California State Treasurer Phil Angelides, Congressman Jay Inslee (by phone), John Podesta, president of the Center for American Progress and Bracken Hendricks, executive director of the Apollo Alliance.

Dr. Ray Perryman, a corporate economist from Texas who prepared a detailed economic analysis of the proposal for a New Apollo Project said, "If economists agree on anything it's that inventing new technologies and creating whole new industries is what America does best. We are a creative economy, not a commodity economy. The New Apollo Project would keep us on the cutting edge of manufacturing emerging technologies and secure our long-term prosperity."

Perryman concluded that the proposed tax credits and investments would create 3.3 million new, high-wage jobs for manufacturing, construction, transportation, high-tech, and public sector workers, while reducing dependence on imported oil and cleaning the air. Perryman's analysis shows that a New Apollo Project would also position the U.S. to take the lead in fast-growing markets, dramatically reduce the trade deficit and more than pay for itself in energy savings and returns to the U.S. Treasury. Perryman's study was based on an input-output analysis of impacts on key industry sectors, using a highly regarded economic model and extensive survey data.

Sen. Maria Cantwell (D-Wash.) said, "At the time of Kennedy's moon shot, we were in space race with the Soviet Union. Now we are in an economic race with the Europeans and Japanese. Bush is focused on the past, the New Apollo Project for energy independence is focused on the future. America led the electronic and communications revolutions. Now we must lead the clean energy revolution if we are to maintain our global economic leadership."

Congressman Jesse Jackson, Jr. (D-Ill.) issued a statement in support of the release saying, "One of the keys to America's energy security – and therefore our national security – lies in rebuilding our cities. We need strategic investments to retrofit old buildings, expand transportation alternatives, restore our infrastructure, and create solar, wind and hydrogen technology. Apollo will rebuild our country in a way that benefits all Americans and reestablishes our global economic competitiveness."

"As California's chief investment officer and a fiduciary of the nation's first and third largest pension funds, I am well aware that the way in which we invest capital can shape not only the contours of our economy, but also the future of our communities, our society, and our environment for decades to come," California State Treasurer Phil Angelides said: "I applaud the efforts of the Apollo Alliance to develop programs that illustrate how strategic public investments can stimulate our economy while at the same time improve the quality of life in communities across our nation."

Rep. Jay Inslee (D-Wash.) said, "The New Apollo Energy Project is an opportunity for a bold new energy policy that can free us from our over-dependence on Middle East oil, expand the economy, and address environmental challenges. We should call for a total national commitment to harness the genius of America's can-do attitude that would design, invent and deploy the new clean energy technologies that benefit this new century. No single national endeavor has such capacity to expand our economy by tapping our innate and unique technological genius for innovation, and creating millions of new jobs."

President Gerard said: "The New Apollo Project is a call to action for labor unions and environmental groups to forge a new strategy, rooted in common interests, for moving America forward. The Bush energy plan is a waste of money and natural resources. A New Apollo Project will unite America around a positive vision of economic growth and reinvestment that's good for business, workers and the environment."

According to Pope, the executive director of the Sierra Club, one of the country's oldest and largest environmental groups, "A New Apollo Project will help accelerate the transition away from our dependence on imported oil and other polluting fossil fuels, and toward clean energy like solar and wind. Apollo stands in marked contrast to the Bush Administration's damaging energy agenda, which hurts job creation and the environment. An Apollo Project can simultaneously address the threats of manufacturing job loss, global warming and our diminishing national energy security."

John Podesta, president of the Center for American Progress, said, "In stark contrast to the secret Cheney energy plan hatched by big oil, the Apollo Project harnesses America's ingenuity in support of an energy program that enhances our security, our health, and our livelihoods."

Bracken Hendricks, executive director of the Apollo Alliance underscored the importance of Apollo in the upcoming political cycle. "We are seeing for the first time a competition among all the major Presidential candidates to produce the best plan for investing in clean energy infrastructure and good jobs. The public is demanding a forward-looking plan to rebuild our economy and a positive solution to our energy insecurity. A bold approach like Apollo is the kind of leadership we need from our next President."

Center for Wisconsin Strategy (2012-05-19 09:56)

COWS is a national policy center and field laboratory for high-road economic development — a competitive market economy of shared prosperity, environmental sustainability, and capable democratic government.

COWS' work is collaborative, experimental, and evidence-driven. Working with business, government, labor, and communities, we try out new ideas, test their effectiveness, and disseminate those with promise. We believe that the best way to predict the future is to start making it, particularly in our states and metro regions.

Some areas of COWS' program focus are:

- Economic and workforce development
- Sectoral strategies and career pathways
- Clean energy and energy efficiency
- Labor markets and job improvement
- Strategies for improving low-wage work

COWS is based at the University of Wisconsin-Madison, famous for the “Wisconsin Idea” that the University should help informed democratic experiment. Since its founding 18 years ago, COWS has often been called “the Wisconsin Idea in action.”

COWS is a 501(c)(3) nonpartisan, educational and charitable organization. Its budget comes from foundation and individual gifts and grants and technical assistance contracts.^[1]

May games (2012-05-23 23:39)

IFRAME: <http://www.youtube.com/embed/frzoCwsRa9M?fs=1>

I've added some really cool games like Valkyrie Profile, Thunder Force V (great SHUMP), Tactics Ogre (rare) for Playstation. Then I got Sonic Colors Wii platformer for \$20. What do you think of the new Wii U controller with the new analogue sticks over the stupid nubs of the previous 2011 wii u controller? Smart move. The rare SNES games I've bought 20 days ago haven't arrived yet. I know I am a little old to be collecting SNES, yet isn't it about collecting the originals over Virtual Console or SNES 9x on PC? I had to do try or regret it for the rest of my life. Should I get Diablo for Playstation? It's possibly the most underrated RPG on the Playstation! This was long before there were DLC content and developers put everything in the original release. I read some review where Einhander could easily win against any Playstation 3 game in terms of difficulty.

Congressional Progressive Caucus (2012-05-25 10:20)

The **Congressional Progressive Caucus** was founded in 1991 by Bernie Sanders-the openly socialist then Congressman from Vermont, Democratic Socialists of America (DSA) and the radical Washington DC based "think tank" Institute for Policy Studies (IPS).

Many members were and continue to be linked to DSA and/or the Communist Party USA, IPS or other radical organizations.

From small beginnings the CPC has grown to embrace more than 80 members of Congress and three in the Senate - Roland Burris, Bernie Sanders and Tom Udall (NM).

Possible new members after 2010 elections

According to David Dayden writing on leftist blog FireDogLake. "What about the ones who won? Democrats picked up three seats from Republicans, making good on some prior anomalies and realigning correctly. Colleen Hanabusa (HI-01), Cedric Richmond (LA-02) and John Carney (DE-AL) all won. Of those, I would say Hanabusa and Richmond will join the Progressive Caucus. In AL-07, Terri Sewell replaced Artur Davis. She's a lot more progressive than he ever was, and she will likely join the caucus. David Cicilline (RI-01), the replacement for Patrick Kennedy and another openly gay member of Congress, is likely to join (Patrick Kennedy never did). The race that a progressive lost in a primary, Carolyn Cheeks Kilpatrick (MI-13), was over ethical issues, and she'll be replaced by Hansen Clarke, likely to join the caucus.^[8]

Democratic Socialists of America

Democratic Socialists of America played a role in organizing the CPC, according to Chicago DSA;^[11]

Congressman Bernie Sanders has been charging that these bail-outs to regimes which violate worker and civil rights are illegal under a law passed last year by Sanders and Representative Barney Frank, both leaders of the Progressive Caucus in Congress which DSA has helped to organize.

Several past members of CPC have been close to DSA including David Bonior, Hilda Solis, Ron Dellums and Major Owens. Serving Illinois Congressman Danny Davis is a DSA member, while Jan Schakowsky, Jerrold Nadler, Bob Filner, John Conyers, John Lewis and Bernie Sanders all have DSA connections.

According to a DSA flier the organization works with CPC to promote "progressive change."^[12]

DSA is an activist organization, not a political party. From promoting single-payer health care, to combating Congress' war on the poor, to proposing democratic alternatives to the power of the transnational corporations, DSA is in the center of struggles to advance a progressive America. This struggle is carried on not only by prominent leaders, but more importantly, through the work of thousands of DSA members across the country.

Since 1982, DSA has been working for progressive change. As a national organization, DSA joins with its allies in Congress' Progressive Caucus and in many other progressive organizations, fighting for the interests of the average citizen both in legislative struggles and in other campaigns to educate the public on progressive issues and to secure progressive access to the media.

According to DSA's Democratic Left, Winter 1996, page 16;

DSA tries to link the U.S. Congressional Progressive Caucus Parliamentary parties of the left in other countries.

In 1997 Chicago DSA member Bruce Bentley wrote;

There is a class struggle in process in the Congress with the Progressive Caucus around such issues as the Welfare Bill, NAFTA and Single Payer Health Care.

As a result of this DSA's Political Director Christine Riddiough organized a meeting with the Congressional Progressive Caucus with the purpose and cogent task as to: "How can we unite our forces on a common agenda?"^[13]

Those in attendance included Richard Trumka, Noam Chomsky, Patricia Ireland, William Greider and Jesse Jackson. According to a Democratic Socialists of Central Ohio, Progressive Challenge, was a national coalition of the Congressional Progressive Caucus, Americans for Democratic Action, NOW, and Democratic Socialists of America^[14].

In 1999 the Young Democratic Socialists of James Madison University wrote;^[15]

D.S.A. is not a political party, but rather works within the left wing of the Democratic Party and other third parties. D.S.A. is a driving force for the Progressive Caucus in the U.S. House of Representatives (led by Rep. Bernie Sanders, Socialist Congressman of Vermont).

DSA link to other parties

According to Christine Riddiough "DSA supports a 'Better Way', global dialogue that links parliamentarians of the Left, community activists and Non-Governmental Organizations working against the untrammelled rights of corporations to divide and rule. DSA tries to link the U.S. Congressional Progressive Caucus to parliamentarians of the Left in other countries."^[16]

Institute for Policy Studies/Progressive Challenge

Congressional Progressive Caucus is heavily influenced by the radical Washington D.C. "think tank," the Institute for Policy Studies (IPS).

From the IPS website history page:^[17]

Much of IPS's policy work is aimed at the national level, and IPS has always worked closely with, and provided analysis and model pieces of legislation to, progressive members of Congress.

*Currently, IPS advises the **Congressional Progressive Caucus**, which, with more than 70 members, is the largest non-party Caucus.*

In the late 1990s IPS established Progressive Challenge to utilize leftist groups including Democratic Socialists of America, Americans for Democratic Action, United Electrical Workers, NETWORK, National Jobs for All Coalition etc to pressure^[18]the Progressive Caucus in the "correct" direction.

Democratic Socialists of America member Bob Roman, writes of a 1998 Chicago Progressive Challenge meeting

attended by Illinois Congressmen Jesse Jackson Jr, Luis Gutierrez and Danny Davis^[19];

On the evening of Monday, April 21, the Progressive Challenge came to Chicago. Starting off with a town hall style meeting that brought together about 150 people in the UNITE hall at 333 S. Ashland in Chicago, the meeting was structured to present testimony from representative of various local organizations to local Congressional members of the Progressive Caucus.

DSA was particularly well represented by the testimony of the Youth Section's International Secretary, Daraka Larimore-Hall. Daraka Larimore-Hall gave an impassioned, coherent presentation that linked the various aspects of DSA's agenda with the project at hand.

Congressmen Jesse Jackson, Jr., Luis Gutierrez and Danny Davis attended the meeting...

The Progressive Challenge is an effort to link the Congressional Progressive Caucus with the larger left grass roots network of single issue, constituent, labor and ideological organizations. The Institute for Policy Studies is very much the keystone organization of this project, which has brought together some 40 organizations including DSA, Americans for Democratic Action, United Electrical Workers, NETWORK, National Jobs for All Coalition to name a few. No one of these groups is a major player inside the Beltway, but together they have captured the attention of the Progressive Caucus and contributed to its growth.

"The Progressive Challenge: Capitol Hill Forum"

On January 9, 1997, over 600 people attended "The Progressive Challenge: Capitol Hill Forum" sponsored by the House Progressive Caucus, Democratic Socialists of America, and a host of other progressive organizations.

The primary goal of this day-long "kick-off" forum was to "identify the unifying values shared by progressives at this point in US history, to help define core elements of a forward-looking progressive agenda, and to pinpoint ways to connect that agenda with the concerns of millions of disillusioned people who lack voices in present politics and policy-making."

After a welcome by Representative Bernie Sanders, an impressive array of legislators, activists, and thinkers offered their insights. Senator Paul Wellstone, Reverend Jesse Jackson, Patricia Ireland of NOW, Richard Trumka of the AFL-CIO, Noam Chomsky, William Greider of Rolling Stone, and DSA Honorary Chair Barbara Ehrenreich were among the many who spoke.

Some emphasized the importance of the conventional, if difficult, process of progressive candidates building grassroots campaigns that treat voters with intelligence and challenge prevailing wisdom regarding what values and issues motivate ordinary Americans struggling to make ends meet-as opposed to using polls and focus groups to concoct "designer" campaigns to appeal to upscale "soccer moms." Other speakers reminded those present that great changes are made by people acting outside of the corridors of power to define justice and "political reality," and the electoral and legislative processes are not the only arenas worthy of activists' attention.^[20]

What virtually all participants acknowledged (thanks in no small part to DSA's role in helping to organize this event and in focusing the activities of the Working Group on Economic Insecurity) was that the centerpiece of a progressive agenda involves addressing the question of the economy and the disruptions, suffering, powerlessness and fear created by the mobility and power of corporations-without glossing over the racism, sexism, xenophobia, homophobia, and other injustices exacerbated by economic uncertainty.

The next step at the policy level is a series of briefings for Congressional staff and members on specific issues related to economic justice (global economy, corporate responsibility, and welfare reform are among the topics to be covered). These briefings are planned for January and February, and out of the briefing sessions working groups on the issues will be formed. The working groups will include Congressional staff and progressive organizations who will help draft legislation. The coalition of activist groups is working on plans to bring the issues to the grassroots through a round of town meetings this spring and through the development of a network of progressive elected officials. The town meetings will be modeled on DSA's Public Hearings on Economic Insecurity and the AFL-CIO town meetings of 1996, and will bring Progressive Caucus members together with local activists.

Progressive Caucus SOTU Address

On Thursday, January 27 2000, from 3:30pm to 5:00pm in 2253 of RHOB, the **Congressional Progressive Caucus** held its 3rd Annual Congressional Progressive Caucus' State of the Union Address. This event was also sponsored by the Institute for Policy Studies' Progressive Challenge coalition whose Fairness Agenda for America is endorsed by 200 public interest groups nationally.

Caucus Chair Rep. Peter DeFazio(D-OR) stated "The Progressive Caucus Alternative State of the Union will provide a much needed reality check to politicians who would rather ignore the priorities of Americans left out of the economic boom – priorities like access to quality health care and education, repairing crumbling schools, addressing the growing gap between the rich and poor, and creating a sustainable global economy that works for everyone, not just the corporate architects."

Anticipated speakers included: Peter DeFazio (D-OR), House Minority Whip David Bonior (D-MI), Earl Hilliard (D-AL);Dennis Kucinich (D-OH); Cynthia McKinney (D-GA);. Major Owens (D-NY)Bernie Sanders (I-VT). Tammy Baldwin (D-WI);. Maurice Hinchey (D-NY);Barbara Lee (D-CA); Jerrold Nadler (D-NY); and Lynn Woolsey(D-CA). John Cavanagh, director of the Institute for Policy Studies also made some remarks regarding public interest groups support of a progressive agenda.^[21]

The Congressional Progressive Caucus, Chaired by Rep. Peter DeFazio (D-OR), consists of over a quarter of the House Democrats, one Independent and Senator Paul Wellstone. The Caucus will be releasing position papers on Health Care and Income Inequality, with reports on the Alternative Federal Budget, Social Security, Minimum Wage, Education and the Global Economy.

(Co-sponsoring organizations also included: Progressive Challenge, Campaign For America's Future, Business Leaders for Sensible Priorities, United for A Fair Economy, National Jobs for All Coalition).^[22]

Communist Party on the Progressive Caucus

A 2002 report by Joelle Fishman, Chair, Political Action Committee, Communist Party USA to the Party's National Board, evaluated the Congressional Progressive Caucus^[23].

Although this Caucus is not large enough to control the Congressional agenda or even to break into the media, the existence of this group of 57 members of Congress, which includes 20 members of the Congressional Black Caucus and six members of the Congressional Hispanic Caucus, provides an important lever that can be used to advance workers' issues and move the debate to the left in every Congressional District in the country.

Communist Party "ally"

In a report "What Can We Learn From the Movement for Health Care Reform?" prepared as part of the discussion leading up to the Communist Party USA's 29th National Convention May 21-23, 2010. Communist Party USA member David Bell wrote on the partial failure of the Party's health care agenda;^[24]

Did we forget the fact that many of the same unions, hundreds of locals, and the rank and file supported single payer? We also turned away from our allies in Congress, the Progressive Caucus, and John Conyers. We did not insist that single payer supporters, including Conyers, be included in the White House summit on health care reform.

CPUSA on Obama, Democrat Caucuses, Int'l Communist Meeting

A report praising Barack Obama, and the changes wrought by him, as well as communist connection to the Democratic Party, was delivered at the 14th International Meeting of Communist and Workers Parties, held in Beirut, Lebanon, November 22-25, by Erwin Marquit, member of the International Department, CPUSA.^[25]

We express our gratitude to the Lebanese Communist Party for hosting this important meeting under the present difficult conditions.

The Communist Party USA not only welcomes the reelection of President Barack Obama, but actively engaged in the electoral campaign for his reelection and for the election of many Democratic Party congressional candidates. We regarded the 2012 election as the most important in the United States since 1932, an election held in the midst of the Great Depression...

Because of this danger, we viewed our participation in mainstream electoral activity as obligatory, even though both major parties in the United States are dominated by capital, with no effective competition from a mass-scale social-democratic party. We are aware that some on the Left in the United States thought that the correct approach to the elections was either to boycott them, or as a protest, to run or support small-scale left-wing candidacies with no possible chance of winning. We Communists rejected this strategy because too much was at stake.

Faced with a choice between the victory of either the Democratic Party or Republican Party, the Communist Party viewed a victory of the far-right Republican Party as an extreme disaster. In this situation, we saw the necessity of a policy of center-left alliances in order not to separate ourselves from the people's struggles for dealing with the far right onslaught. The basis of such an alliance now includes the labor movement, organizations of African Americans and Latinos, the women's movement, gay and lesbian civil rights groups, and organizations of the elderly and retirees. On some issues, these groups are joined by a few far-sighted elements of capital...

In our electoral policy, we seek to cooperate and strengthen our relationship with the more progressive elements in Democratic Party, such as the **Progressive Caucus** in the U.S. Congress, a group of seventy-six members of the Congress co-chaired by Raúl Grijalva, a Latino from Arizona, and Keith Ellison, an African American Muslim from Minnesota. We also will strengthen our relationship to the Congressional Black Caucus (formed by African Americans in the Congress), which has been the point of origin of innovative policies including an end to the U.S. economic blockade of Cuba, and with the Congressional Hispanic Caucus. In its domestic policy, for example, the Progressive Caucus has put forth a program for using the public sector to deal with unemployment. It has opposed the use of the so called "war on terror" to incarcerate U.S. citizens indefinitely without criminal charges. In its foreign policy, the Progressive Caucus and the Black Caucus are outspoken in their opposition to U.S. imperialist policies abroad. The Progressive Caucus, now that Obama has been reelected, will be playing an important role in contributing to the mobilization of mass activity on critical issues to bring pressure on the Congress and administration to act on them...

While the victory of Obama is a welcome aid for us in our domestic struggles, we still face the challenge of mobilizing mass pressure on his administration to reverse the imperialist character of U.S. foreign policy. The CPUSA will pursue this formidable task vigorously in alliance with domestic progressive forces and with our comrades in the Communist and Workers' Parties and their allies throughout the world.

CPC Represents "the Heart and Soul of the Democratic Party"

Rep. Lynn Woolsey

Earl Ofari Hutchinson

On Nov. 15, 2010, Earl Ofari Hutchinson of The Huffington Post and New American Media conducted an interview with Rep. Lynn Woolsey, House Chair of the Congressional Progressive Caucus. The interview reads as follows:^[26]

Earl: Many are not familiar with the Progressive House Caucus. How big is it?

Lynn: We had 83 members before the election. It is bicameral, with House and Senate members. It's by far the largest caucus in Congress. We lost four members this election. But we also gained a couple of new members. We will not have less than 80 members in the next Congress. The Blue Dog Democrats lost almost two-thirds of their members.

Earl: What are the major issues that the Caucus will press Congress and the Obama Administration on?

Lynn: It is clear that we represent the heart and soul of the Democratic Party. So, the first item is jobs. We have to have a robust jobs bill. One that we should have had when President Obama first took office and his popularity was at its height. He had a big majority in the House and Senate. We would have doubled the amount of money allocated for

the jobs bill that came out of the House, which the Senate cut to shreds. The other priority is combating the notion that the timetable for ending the Afghanistan War is 2014. The war is killing our budget, killing our people, and killing our relations with our allies.

Earl: What does it take to make that happen?

Lynn: None of this is going to happen until we get money out of politics, get a bigger control of the media, and that means diversifying ownership beyond the three corporations.

Earl: The headline article in the Washington Post, Nov. 11, was "Liberals plan to push Obama not to compromise with GOP." Will the Progressive Caucus take the lead in pushing the president not to "compromise" with the GOP?

Lynn: We were the most productive House in recent legislative history in getting key pieces of legislation passed. Unfortunately, it was not enough. We were in such a deep economic hemorrhaging. We stopped that. But to do more we have to be even bolder in our actions. We're going to push the White House to come forth with bold steps. It's not too late now. But it will be in two years. So we're hoping that he recognizes that.

Earl: White House advisor David Axelrod was quoted to the effect that Obama would compromise on the "big issues." Did that set off alarm bells with you and the Caucus members?

Lynn: I and Caucus co-chair Raul M. Grijalva sent the President a letter Friday, Nov. 12, that we totally support rolling back the Bush tax breaks for the wealthy. And no cuts in other programs such as food stamps that benefit the poor and needy.

Earl: White House Press Secretary Robert Gibbs blasted liberals and progressives as the "professional Left" for continuing to criticize the president despite what he's tried to accomplish.

Lynn: I totally disagreed with him. I've won office with 70 percent of the vote, and there is a large base of voters that are progressive. This is America, and they do have the right to express themselves. And criticism or not of us, we're not going to stop our criticism on policy issues we disagree with. In fact, in line with the Congressional Black Caucus, the Congressional Hispanic Caucus, and the House Pacific Asian Caucus, we will represent a good majority of the Democrats who remain in the House.

Earl: So no compromise on the core issues

Lynn: Any idea that we're going to reach across the aisle and surrender our Democratic ideals on jobs, health care, education, and fighting for working people and not the wealthy is not going to happen. We're not going to compromise our votes to support programs just to appear that we're compromising. We're not going to start from the right of center and go further to the right. That's not what the nation needs.

Earl: There were reports that during the health care debate the White House shunned the Progressive Caucus. How accurate is that?

Lynn: No we were not shunned. I still hear the president saying, "Lynn what's our agenda on health care and what's to be done to secure passage." We took groups of representatives to the White House more than once for meetings. We always had an open-door relationship to work with the president and the House leadership. We intend to continue to work with the president. He will have a hard time getting anything done if he doesn't have us with him. And he knows that.

But we're not going to compromise with the right on some lukewarm programs that should have been much bolder. The public option in the health care fight was a good example of that. We still feel it was given away before the health care debate really began. So we're not going to roll over. Most of our members won reelection, and in some ways we'll have an even bigger voice in the next Congress.

Earl: Nancy Pelosi wants to stay in the House Leadership. Do you support her?

Lynn: I'm 100 percent behind her. None of the accomplishments in this past Congress would have happened without her leadership. They label her as some wild-eyed liberal, but that's just name calling. She's an effective leader. And the administration knows that. I'm confident that she will be our Minority House leader.

Restore the American Dream for the 99 Percent Act

Rep. Grijalva and Ellison at the Capitol press conference

"Responding directly to national demand for a massive jobs program", members of the Congressional Progressive Caucus, December 13, 2011, introduced the Restore the American Dream for the 99 Percent Act into the House of Representatives.

The bill would create more than 4 million jobs and reduce the deficit by more than \$2 trillion over the next 10 years, making it the biggest government effort thus far to marshal the resources needed to address the economic crisis.

While no one expects the bill to pass in the Republican-controlled House, it is viewed by many as outlining what really must be done if the economy is to be restarted in a way that benefits the overwhelming majority of the population. Progressive Caucus Co-Chairmen Reps. Keith Ellison, D-Minn. and Raul Grijalva, D-Ariz., presented the legislation at a news conference in the Capitol.

The bill would create several "corps" that will offer government jobs to the unemployed doing essential work including repairing school buildings, maintaining public parks, building neighborhood energy efficiency and conservation projects, and providing health care and other public services in underserved areas. One of the corps would be specifically devoted to re-hiring teachers and first responders laid off by cash-strapped state and local governments .

There are provisions in the bill that require 75 percent of the goods and services purchased by the federal government to be made in America, provisions designed to help small businesses get federal contracts, and allocation of \$50 billion alone for highway, public transportation and electrical grid improvement projects.

The bill provides for tariffs in cases where what the lawmakers called "currency manipulation by China" results in "artificially driving down the cost of Chinese imports."

One clause in the bill protects both the long-term unemployed and wounded veterans from hiring discrimination.

The bill includes provisions that would raise \$800 billion through a surcharge on millionaires and billionaires, end tax subsidies for oil companies, and impose a tiny financial transactions tax on Wall Street.

There would be other budget savings through ending the war in Afghanistan and slashing \$200 billion from the defense budget by eliminating unneeded weapons systems and cutting in half the military forces currently stationed in Europe.

The bill also strengthens health care reform by creating a public health insurance option that would be available through health care exchanges. That measure alone, the lawmakers say, would drive down spending federal health care spending by \$90 billion.

The bill would allow Medicare to bargain with pharmaceutical companies to get bulk discounts, a move blocked by Republicans in the past. Supporters say it would help save more than \$150 billion.

To save Social Security benefits and trust fund, the legislation would raise the cap on earnings taxed by Social Security above its current \$106,800.

"The Republicans want the people to think about how bad things are and to focus their anger on the president," said Grijalva "They don't want people to count the things the Republicans voted down that would have helped this country."

"This bill," said Ellison, "shows we can put people to work today by building for tomorrow."^[27]

Upgraded to Linux Mint 13 on laptop!!!! (2012-05-25 23:05)

My Linux Mint 13 Cinnamon desktop based on Gnome 3.4.0

Linux Mint 12 crashed. Linux Mint 13 had some problems, but I added a boot option via directions on the Linux Mint homepage. Cinnamon has a good conservative approach. I get the 3.2 linux kernel. This kernel release fixed some stalling in Linux Mint 11. My favorite Gnome hardware detection utility is back. Cinnamon is a front end for Gnome 3.x which further improves the Gnome 3 interface. It needs hardware acceleration so old PCs run Linux Mint 13 MATE, a project that continues where Gnome 2.32.2 ended. This system may be better than openSUSE 12.1 (with KDE, Gnome, LXDE and XFCE shells), because it comes with codecs built in and is based on Debian/Ubuntu and not RPM. Deb packages don't have as many dependency issues as RPM package manager. Mark Zuckerberg used Debian when he developed Facebook. We're living in a FreeBSD world now where Red Hat Enterprise Linux is inferior. I like Libreoffice 3.5.2 already installed. I can now read Visio files. My fast quad-core laptop doesn't like its kernel upgraded and creates a black screen when I attempt this. My other Linux Mint 11 laptops takes 3.3.7 kernels upgrades. Linux Mint may not be as secure as PC-BSD, but it works. The GRUB boot loader recognizes my PC-BSD 9.0 partition and boots fine.

/etc/grub.d/40_custom:

Boot PC-BSD 9 in GRUB

```
menuentry "FreeBSD" --class freebsd --class bsd --class os {
    insmod ufs2
    set root='(hd0,4)'
    chainloader +1
}
```

then

Terminal # update-grub

ASUS Transformer Pad TF300 Impressions (2012-06-03 04:24)

<http://www.engadget.com/2012/04/22/asus-transformer-pad-tf300-review/> I really like the 8.0 MP camera. It has the most powerful quad-core Nvidia Tegra 3, 1 GB RAM, Android 4.0. Great for Flickr, Facebook. The Galaxy Tab 2 10" device has inferior hardware in it for the same price. I don't need a ASUS Transformer Pad TF300 right now. I have a quad-core (AMD A6 APU) laptop with 15.1" screen, 6 GB RAM, and a 512 MB GDDR3 Radeon HD 6870 GPU

Dell Holo in 2018 (2012-06-04 01:38)

We like to believe that advancement in technology in itself has allowed our life style to become easier and more manageable. Daily, improvements can be seen in computers, television, capabilities of the internet, film, and radio, as well as the total transformation of the telephone. For many, today's technology has allowed us to be more mobile or flexible in both work and home life mostly due to the accessibility in all forms of media communication. So how might our society be react to when our computers, television, the internet, film, radio, and telephones are all combined into one device, positive or neg? Will it change our viewing habits, our emotional connection and perception of media. Lastly, how will this device alter or modify current business approach to developing media? The answer to these questions depends on if our society allows technology to control us or will we as a society control the use technology. You do not have to view far into the 'looking glass' to visualize how technology represents the needs and wants in our society. Accordingly to Lester, "computers . . . are machines that reflect the culture that makes them". So how does society adapt to all the conveniences and advancement in all forms of communication? "A society always gets the media images it deserves"; therefore, should it not be our responsibility to control it. Without that control, the media will intrude and take over our lives both personally and massively. One little gadget or device that controls all forms of media can either be destructive or useful; it really depends on us and how we use the on and off mechanism on the single gadget. (Lester, P.M., pg. 367, 2011)

Our children can be the most vulnerable to the influx of media with the increase rise in violence, sexism and destruction through the internet, television and video games. Without control on the their media exposure in their lives, it may create a false sense of reality about themselves or the real world and/or may even isolate them from the personal interaction with family and friends. Media technology can be positive and a resourceful tool for our today's youth if usage is curtailed in bringing out the best of him or her, while at the same time reaping the rewards of interpersonal, face-to-face relationship with family and friends. The diversity of task that can be accomplished on today's computer is tremendous. Appropriate video games can enhance eye-hand coordination as well as a device for entertainment amongst friends and family. With other media outlets, entertainment and educational resources can be easily tapped and enrich the minds and creativity of our children and youth. (Roach, J, 2003)

For adults, one device that handles all means of communication can be advantageous making accessibility more streamlined and flexible in usage of the device, while at the same time provide more mobility. The possible engineering proposals of these future devices can be amazing, just as the possibility for "holographic and sound vibrations are the future". One example is the HOLO computer that has a prospect design for a futuristic very light-weight computer that can be worn as personal wrist band or a bracelet or stored in a pocket. Another very futuristic idea in computers is where they are using replicas of DNA strands that have been cut and fused together which resulted in an increase in DNA's ability to store data. The true question is whether or not our society adapts to these new inventions without being too engaged in such devices or consumed with mass media communication that could eventually control our lives. Emotional connection to media has to be cautiously approached in order so we as human beings do not lose sight of our values and moral standards with the face-to-face interaction with our fellow man. (Kobaxe, 2010)(Halverson, N., 2011)

The telephone, e-mails or voice mail, text messaging, chat and social networks all are faster and more efficient means of communicating with others, especially with family and friends, who live long-distance from us. Mass communication from the world-wide web / Internet, allows broadcast news, movies, newspapers, magazines, and radio a means to deliver messages, advertisements, and entertainment to a large audience all over the world. Businesses crave

technology and welcome all its advancement. With technology, businesses have the opportunity to cost-effectively expand and advertise their products to different areas in the United States and the world. Technology has made national and international ecommerce a reality that has become more feasible and efficient, where buying and selling world-wide can be done with just a 'push of a button' or a 'sound' of your voice from one device. As long as businesses do not lose their "human" touch, technology will always have a hand in business's economics, cyber-security, and growth. (Pheifer, T. Dr., 2009)

CBO: On Current Path, US Economy Could Cease to Exist in 2035 (2012-06-04 13:46)

Keep this harrowing projection in mind the next time Democrats accuse conservatives of "ending Medicare," or whatever. We are all aboard a taxpayer-funded high speed train to self-destruction, and our engineer-in-chief is shouting full speed ahead. The non-partisan Congressional Budget Office is now warning that unless major reforms are implemented very soon, overwhelming debt could crush the entire US economy:

...Debt would reach 250 percent of GDP by 2035. CBO's model cannot reliably estimate GNP after debt reaches that amount, in the agency's judgment: The assumptions about private saving and capital inflows incorporated in CBO's model are based on historical experience, and if interest rates and the debt-to-GDP ratio rose to levels well outside of that experience, those assumptions might no longer be valid. In 2035, GNP would be 21 percent below the benchmark under the assumptions leading to the most negative effect on GNP; beyond 2035, the negative effect on GNP would grow under those assumptions as debt continued to increase relative to the size of the economy.

In other words, if debt and stagnation persist under a negative outlook scenario, the CBO literally cannot compute how the American economy could continue to exist beyond the year 2035. That's 23 years from today. Note the dark dotted line that abruptly ends (via Jim Pethokoukis):

USA Today has more on the coming calamity:

The federal debt is expected to be 70 % of the gross domestic product by the end of this year, and could be double the GDP by 2037 unless major changes are made, the Congressional Budget Office reports.

The gross national debt has already exceeded 100 % of GDP. President Obama's latest proposed budget would accelerate spending to unprecedented levels and would add \$11 Trillion to the sea of red ink. His own administration admits they have no plan to deal with the long term, entitlements-driven debt crisis facing the nation. But they are dead set against the House-passed Republican budget, which slows the rate of increased spending, reforms Medicare, and balances the budget by 2030. Paul Ryan has been warning about this fiscal cliff for years. Liberals either laughed at him, or called him a dangerous austerity-obsessed zealot – or both. They offer demagoguery and scorn, but no ideas. The Romney campaign is rightfully alarmed, blasting out this statement to reporters:

"Today's CBO report confirms that President Obama has placed us on a path to fiscal ruin. This is a President who promised to cut the deficit in half, but proceeded to run four consecutive trillion-dollar deficits and accumulate nearly

as much publicly held debt as all prior presidents combined. Instead of displaying leadership, the President has proposed a new budget that Congress rejected unanimously. Instead of tackling entitlement reform, he has made clear that he has no plan for addressing the challenge. It is immoral to place such a burden on future generations, and Mitt Romney will not allow it to continue."

In fairness, we were in trouble before Obama took office. But he has made the situation much, much worse. You already saw this in Dan's post earlier, but in the time it took you to read through this post, the national debt increased by roughly \$3 million. Team Obama's response? But...war-on-women-student-loans-equal-pay-Bain-Capital!

Thankyou Wisconsin voters (2012-06-06 14:21)

"While tonight's outcome was not what we had hoped for – no one can dispute the strong message sent to Governor Walker. Hundreds of thousands of Wisconsinites from all walks of life took a stand against the politics of division and against the flood of secret and corporate money spent on behalf of Scott Walker, which amounted to a massive spending gap of more than \$31 million to \$4 million. It is a testament to all of those individuals who talked to their friends, neighbors, and colleagues about the stakes in this election of how close this contest was. The power of Wisconsin's progressive, grassroots tradition was clearly on display throughout the run up to this election and we will continue to work together to ensure a brighter future for Wisconsin's middle class. This vision was shared by the voters tonight, as exit polling showed President Obama beating Mitt Romney 52-43, a 9-point difference. On the questions of who would do a better job on the economy and who would help the middle class the most, President Obama again held a strong advantage over Romney. These data points clearly demonstrate a very steep pathway for Mitt Romney to recover in the state."

Democrats and unions massively outspent Republicans in 2008 and 2010, they picked this recall fight, and now they're whining about spending? Spare me. As for the "flood of secret and corporate money" that supposedly put Walker over the top, this unhinged narrative disregards both the loads of union cash that poured into the recall fight, and the fact that Walker crushed Barrett among small donors. Obama supporters should continue to assure each other that their man is sitting pretty in Wisconsin. He's up by 9 points – the exit polls said so! Those same exit polls first suggested that the Walker-Barrett contest was a 50/50 "total coin flip." This prediction was off by...roughly nine points. Michael Barone analyzes the exits and reaches the conclusion that Wisconsin is very much in play for Mitt Romney. And I'm not going to even attempt to figure out exactly what "strong message" Team Obama believes this result sent to Governor Walker. "Keep it up," maybe? I'm dizzy from the spinning. I'll just leave you with this:

Track Your Stolen PC/Laptop before it Gets stolen (2012-06-12 09:50)

Prey is an application that can track your computer should it get stolen or lost. The program is free (with pro accounts available). It is released under the CC-BY-SA licence.

The giveaway info is located at the end of this post.

Once you have installed Prey, you must configure it. To do this run the configuration wizard in Applications + System Tools + Prey Configurator. You must enter the root password to configure Prey. When you open it you will see two tabs. The first is labeled Main Settings. Under this tab you can choose options such as how often a report is sent, enabling a guest account and WiFi auto connect (to connect to open WiFi networks automatically).

The second tab, labeled Reporting Mode, lets you choose whether or use Prey's on-line control panel or the standalone version. I will be demonstrating the control panel method. Select *Prey + Control Panel (Recommended)* and click forward .

If you have an account click existing user and enter you email and password. If you don't have an account, select New user and click forward.

Enter your name, email address and password and click apply.

The screenshot shows the 'Prey Configurator (v0.4.4)' window. At the top is the 'PREY' logo with 'preyproject.com' underneath. Below the logo are two tabs: 'Main settings' and 'Reporting mode'. The 'Main settings' tab is active, displaying a message: 'Please provide the following information so we can create your account. Once it's created we'll send you an email to confirm the address you entered is correct.' Below this message are four input fields: 'Your name' (containing 'Ubuntu Root'), 'Email' (containing 'jason@ubunturoot.com'), 'Password' (masked with dots), and 'Confirm password' (masked with dots). At the bottom of the window, there is a status bar with a lock icon and the text 'Connection secured with SSL.', and three buttons: 'Cancel', 'Back', and 'Apply'.

After creating your account you must verify your account. You will receive an email similar to the following. Click on the link in the email to verify your account.

After you have activated your account you can log into the control panel. When you log in you will see the computer you added in a previous step.

If you click on that computer you will see details about that computer. This included the name, type, OS, etc. This is also the screen that is used to mark the computer as missing.

If you click on *Modules* in the top navigation panel, you have access to various part of Prey. Two types of modules are available: *Report* and *Action* modules. Report modules run when the computer is marked as missing. The *Network* modules gives will tell you about the Internet connection . The *Session* module will return a screenshot, modified files and running programs. The *Web cam* module will take a picture using the internal camera . I was not able to test this module as my camera is broken. The last report module available is *Geo*; this module will find you computer and put the location on a map. Action modules are run as soon as Prey receives the command (this requires version 0.4 or higher). The action modules that are included are *Alarm*, *Alert*, *Lock* and *Secure*. These modules play a loud sound, send the user a message, lock the computer and deletes personal data, respectively.

Click on the image for a larger view.

This stuff is all useful, but now I will show you what happens when you lose your computer. When you lose you computer, you should log into Prey and mark you device as missing.

The screenshot shows the Prey configuration web interface. At the top, there are tabs for 'Configuration', 'Modules', and 'Hardware', with 'Configuration' being the active tab. A 'Save changes' button is in the top right. Below the tabs, there's a 'Missing?' section with a 'YES' button. The 'Device configuration' section includes fields for 'Name' (ONONWARA), 'Device type' (Portable), 'Operating system' (Linux), and 'OS platform/version' (Debian/Ubuntu). The 'Prey configuration' section includes 'Frequency of reports/actions' (5), 'Request new hardware scan' (NO), 'Auto update' (YES), and 'Notify new reports' (YES). A 'Save changes' button is at the bottom right.

Now you wait. When Prey receives a report, you will receive an email similar to the email below.

Click on the link to the report. When you open the report you will see info about the location of your computer. My report shows the uptime (the amount of time the computer has been on), user(s) currently logged in, active connections and WiFi info. It also includes a screenshot and a map. The map shows where the computer is. It uses WiFi and or GPS to find the location of the computer. The location I given was very accurate; less than 100 meters off. This is what my report looked like.

Click on the image for a larger view.

As afore define:mentioned, Pro accounts are available, These plans allow for more computers, active mode (report the last time computer *checked in*), automated deployment, SSL encryption and two minute report intervals.

Top Wii U titles (2012-06-14 03:11)

1. Pikmin 3

Publisher: Nintendo

The long awaited sequel debuted this morning with the red, blue, and yellow Pikmin you know and love. There are four new captains in the game and the whereabouts of Captain Olimar are currently unknown. The captains are all present on the map at the same time, and the player can switch between them to complete puzzles and more easily navigate the game's large maps. There's a new Pikmin as well: the rock Pikmin.

2. New Super Mario Bros. U

Publisher: Nintendo

In the vein of the familiar Wii title, and the upcoming 3DS iteration, New Super Mario Bros. U features four player co-op. Players use a Wii Remote to control the hero. In a twist, a 5th player can use the GamePad to get in on the action asymmetrically, helping or hindering the four players.

The new Mario Brothers title features deep integration in the Miiverse, too. Players can leave notes on the world map, providing helpful hints or warnings as players continue their journey.

3. Nintendo Land

Publisher: Nintendo

Reggie Fils-Aime said that this would be the game to "sell" the concept of the Wii U. The game imagines a Nintendo-themed amusement park. The game will feature twelve attractions, with five announced here. The first three are multiplayer, while the latter two are for single-player: Animal Crossing: Sweet Day, Luigi's Ghost Mansion, The Legend of Zelda: Battle Quest, Takamaru's Ninja Castle, and Donkey Kong's Crash Course. The game prominently features five-player asymmetrical multiplayer like that found in New Super Mario Bros. U.

In a demonstration of Luigi's Ghost Mansion, the four players utilizing Wiimotes attempt to navigate a Pac-Man-style maze. The fifth player controls a ghost that is invisible to the others. The ghost's objective is to sneak up on each of the four players, making them faint. If the ghost takes out all four players, then he wins. Again, it pits that extra character against the others.

4. Lego City Undercover

Publisher: Warner Brothers

Lego City Undercover is an open-world crime fighting game. Traveller's Tale remains the developer of the Lego-inspired series with its trademark sense of humor. Gameplay appears to be action-packed and whimsical and set in an open-world fashion. There are tons of vehicles to drive, and platforming appears to be a large element of gameplay as well. The Wii U GamePad is being used as a detective tool, scanning environments for evidence, contacting other detectives, and acting as a secondary HUD.

5. Sing

(Working Title)

Publisher: Nintendo

Sing is, perhaps unsurprisingly, a singing and dancing game that takes full advantage of the asymmetrical gameplay afforded by the Wii U. One player holds the GamePad in portrait while the lyrics are scrolled down the tablet's screen. This means the singing player doesn't have to look at the TV and, ideally, can interact with the crowd. It looked to be little more than a first-party karaoke simulator, really.

6. ZombiU

Publisher: Ubisoft

Ubisoft is crafting a mature, first-person zombie survival game, exclusive to Wii U. The GamePad acts as a map, scanner, radar, scope and inventory. The graphics and animations are better than anything before seen on a Nintendo system. Comically, the game will take a picture of a player, and convert their face into a zombified version of their former selves ? similar to a smartphone app.

7. Aliens: Colonial Marines

Publisher: Sega

The recently delayed shooter will now be missing a day-and-date launch for the Wii U. However, it will still afford Wii U owners a claustrophobic, action-packed first-person shooting experience developed by Gearbox Software. As

a nod to the movie that inspired the game, the Wii U screen will act as a radar, pulsing at intervals to alert you to approaching Xenomorphs. This type of gameplay would lend itself well to a VIP-style competitive multiplayer mode, or the co-op modes that have been invading nearly every high-profile shooter of the last few years.

8. Batman: Arkham City: Armored Edition

Publisher: Warner Brothers

Rocksteady's critically acclaimed game of yester-year is coming to the Wii U with a slew of unique features. For example, new gadgets like the Remote-Controlled Batarang allow the player to use the gyroscope in the Wii U GamePad to control the Batarang. The port is being handled by Warner Brothers Montreal.

9. Wii Fit U

Publisher: Nintendo

Using the balance board of yester-year and combining it with the Wii U GamePad allows for new ways to integrate game-style mechanics into workouts. A new pedometer accessory will sync with the Wii U GamePad to help users keep better track of their caloric burn.

10. Scribblenauts: Unlimited

Publisher: Warner Brothers

The creativity behind 5th Cell Media's Scribblenauts has been lauded since the game launched on the original Nintendo DS. The Wii U sequel allows the player to create their own objects and associate them with certain phrases. Unsurprisingly, players are allowed to share their creations with other players for use in their story, or for further creative modification.

I've been browsing online more than three hours today, yet I by no means discovered any attention-grabbing article like yours. It's lovely value sufficient for me. In my opinion, if all site owners and bloggers made excellent content as you did, the internet might be much more useful than ever before.

My Personal Webpage Resurrection ???? (2012-06-16 17:13)

It's been ten years since I used Macromedia Dreamweaver MX for my Geocities account and some other inferior Angelfire personal webpages. I used Dreamweaver 2000 in high school in 2002 when I acted like a University of Wisconsin helpdesk. That was when javascript was used to make pull-down menus. So I paid \$150 for a used copy of Adobe Dreamweaver CS6 off Amazon.com.

They say that personal webpages we know as blogs are dying since 2008.

Now I can upload personal webpages on archive.org.

EVERDRIVE64 to play Super Mario 64: Star Road (2012-06-20 19:17)

To play this average game on my TV (probably 7.0 out of 10 as far as N64 games are concerned), I need this new N64 flash drive called Everdrive64. Star Road is the buggy sequel to Super Mario 64.

**NASA's antimatter spaceship to Mars (2012-06-20 19:51)**

With all the cuts to NASA, I think there is going to be an international effort to put man on Mars. I believe it should be instead an American undertaking, because then the US flag is on there and US gets more UFO crashes. Antimatter is 300 more efficient than nuclear power. It is difficult to find anti-matter on Earth so no anti-matter power plants are built. About 20 grams of anti-matter will take a spaceship to Mars and 20 grams to take them back. According to historical records in the 1960s, NASA is already 30 years behind schedule for a manned mars mission. I admit that 1980s computers weren't exactly up to the task for mars landing. You look at Alien (1979) computers and you wonder what President John F. Kennedy was drinking.

**E3 2012: Wii U impressions (2012-06-22 03:13)**

My favorite game for E3 2012 was Halo 4 with the FMV video kind of like Command and Conquer 3! The graphics looked really good.

Nintendo needs a Dual Shock 2/3 for wii U than it's fine. I agree the games being dumb. Wii U needed a Mario Kart 8, Super Mario Galaxy 3, Legend of Zelda U, Super Smash Bros U and a Final Fantasy X HD. I tend to think that New Super Mario BRos U is old-school. I liked Space World 2001 a lot better, because it had Mario Kart Double Dash, Super Smash Bros. Melee, Super Mario Sunshine, Wave Race Blue Storm, and Metroid Prime in it. For my birthday in 2001, Nintendo had a Mall of America tour that I went too with all those games playable plus Legend of Zelda The Wind Waker. I don't remember the Nintendo 64 launch. I barely remember the Dreamcast launch on 9/9/99 at Toys R Us.

Nintendo better make all games compatible with Wii's classic controller since that controller is a lot better than Wii's nunchuck and wand.

I never cared for New Super Mario Bros. Wii or Pikmon, but I like Assassians Creed and Batman Akham City. Playstation 3 and Xbox 360 and Wii all feel more epic than Wii U and in that order.

Wii U broken, Xbox 720/ PS4 too late to market (2012-06-24 12:40)

<http://www.ign.com/articles/2012/06/22/are-the-next-gen-consoles-coming-too-late> according to O1Net's report, the hardware powering the Wii U simply isn't up to scratch to do what Nintendo needs it to: Namely, run not just the console, but beam data to its fancy touch-screen controller as well. Apparently developers working on the console are having to use "tethers" to ensure serviceable communication between the Wii U and its controller, but even then things still aren't working that well, and progress is reportedly halted daily with repeated software updates for the pad.

Xbox 720 and PS4 could be years too late on the market.

CNN news thought that Wii U is an accesesory for Wii.

Videogames look so much more interesting than Hollywood at this point. There isn't anything out that excites me. I end up buying some old 1950's "Twelve Angry Men" and John Wayne boxsets. New shows are complete trash.

Leaks: Xbox 720 has Radeon HD 7850 (2012-06-27 03:06)

Electing Romney Just Became Imperative (2012-06-27 09:41)

The Supreme Court did not save us from ourselves, at least not entirely. That is still up to us, the people.

When the American people elected Barack Obama and large Democrat majorities, the die was cast. ObamaCare was coming. Popular or not, constitutional or not, affordable or not, it didn't matter. They were going to pass it, and then the rest of us could find out what they put in it.

After the Democrats shoved the 2700 pages of ObamaCare down our throats – and we did find out how expensive, controlling, and coercive the legislation was – a majority of Americans wanted the Supreme Court to toss it aside as unconstitutional.

In a 5-4 decision, the Court did not deem it a legal overreach by the Democrats. While I would have agreed with the minority (Scalia, Alito, Thomas, Kennedy), I respect the decision.

For those of us who originally disagreed with ObamaCare and now disagree with the majority opinion of the SCOTUS, the challenge remains the same as it would have been had the Court ruled otherwise. We need to elect Mitt Romney and House and Senate majorities that will repeal ObamaCare and replace it with free-market, pro-liberty solutions.

In a very real way, the Court just put the responsibility back on the voters to re-establish government of, by, and for the people. In the end, we get the government – and policies that go with it – that we deserve. So, who will we elect as our representative leaders in November? The importance of this election – already historic – just grew even greater.

As the nation absorbs and deciphers the SCOTUS ruling on ObamaCare, we thought our readers would find the following excerpts from NRO's analysis insightful. Included is a link to the entire editorial.

Barret County, WI trip (2012-06-28 20:06)

Barret County park beach for dog swim

Girl Scout camp ground near our camp site on Lake 26. I have seen a girl scout camp before and girl scouts use cabins.

The casino doesn't like cameras, but I chanced it and took this one. Flash risk getting caught. Played Vegas Strip Black Jack once. Most people in here were 60+.

I don't like it as much as a subtropical trip like Perth, Australia, Cayman Islands, Cozumel, Mexico or Miami, Florida (been there), but it costs even less than Wisconsin Dells trips.

New Linuxes including Fermi Linux 6.2 Yay! (2012-06-30 10:20)

Bought some Linuxes for Linux class (all x86-32) In North America, the Linux+ and all the classes at college are Fedora Linux. All of this bias is due to the CompTIA Linux+ certificate relationship with Red Hat. That's why I bought Red Hat distros. My first Linux class in 2002 was done in Red Hat Linux 7.3, 2nd WITC Linux course was using Debian based Knoppix 3.7, and my third Linux course was done on Fedora 10. The campus course is teaching this class with Fedora 17. I usually am on openSUSE Linux with Crossover Linux for KDE 4.7.4 or Ubuntu based Linux Mint. Ubuntu is easiest when you want to update the kernel and packages. If you plan to implement an high load, mostly static web server, you will probably want to go for the Ubuntu route. On the other hand, for a PostgreSQL database I would surely prefer a Red Hat system.

Fermi Linux LTS (Long Term Support) is a site distribution based on Scientific Linux, which is in essence Red Hat Enterprise Linux, recompiled. It is Scientific Linux with Fermilab's security hardening and customised configurations to allow an administrator to install Fermi Linux and have the machine meet Fermilab's security requirements with little or no extra configuration. Since Fermi Linux LTS is based on Scientific Linux, it shares its goal that if a program runs and is certified on Red Hat Enterprise Linux, then it will run on the corresponding Fermi Linux LTS release.

Scientific Linux 6.2 impressions (2012-07-02 14:10)

Scientific Linux does do better stuff than Cent OS. Scientific Linux would read my Windows 7 NTFS drive and Cent OS wouldn't with no configuration. Cent OS programming packages like Perl Programming modules are essential for class. I wonder if Scientific Linux Fermi 6.2 install dvd has the perl programming packages I desperately need coming home Wednesday ????

Scientific Linux 6.2 still came with Bash shell, Bourne shell, VIM editor, Emacs, and TC Editor I need for class.

Cent OS 6.2 has Perl Programming, C++ programming, Network Administration, Python Programming, Wireshark, VIM front end on it.

Crossover Linux 9.2 RPMs worked on both Cent OS 6.2 and Scientific Linux 6.2. It loaded Winamp and VLC.

Scientific Linux (Fermi) 6.2 is hardcore distro aimed at hardcore Fermilab. The Fermilab people created it, because of licensing costs with red hat enterprise linux would probably made it impossible so scientific linux was born.

I am forced to use Cent OS now, because of those perl programming packages. I am going to install Fermi 6.2 Wednesday or Thursday to make sure I made the right choice with Cent OS 6.2.

Virtual box 4.1 (2012-07-03 14:11)

I'm going to do this on Scientific Linux Fermi 6.2 once I get it in the mail. First day I played with Virtualbox. I also have the Windows 7 version of Virtual Box so I can run Linux Mint on Windows 7. Virtual Box is free. Virtual Box is supposed to be better than Microsoft Virtual PC. I am using the wrong operating system, because Cent OS won't see my Windows partition files. I should be using Scientific linux Fermi instead. My Fermi 6.2 hasn't come in the mail.

US Airforce Linux Distro (like Fermi Linux) (2012-07-04 09:52)

nother good distribution is Lightweight Portable Security, or LPS for short. This distribution is maintained by the US Air Force, and is as far as I know the only distribution coming from the American government (or in this case, military). It's not uncommon for countries to produce their own Linux distributions, as China has Red Flag Linux and Turkey has Pardus.

This distribution is special because it takes a more minimalistic approach. Aside from the usual hardened code, it uses a lightweight desktop environment that resembles Windows XP, and only includes Firefox and a few additional tools. It also has an easy to use “Encryption Wizard” which can aid you in your quest for privacy and security. Since this is a brainchild of the US Air Force, I would trust using it. Like Tails, it runs only in a live environment, and disappears along with any traces as soon as you shut down or reboot.

Why US Gov agencies needs openBSD or FreeBSD in 21st century (2012-07-04 14:27)

Sen. John McCain rarely ceases to boggle the mind. He did it again today, highlighting a provision that he inserted in the defense authorization bill requiring U.S. Cyber Command “to provide a strategy for the development and deploy-

ment of offensive cyber capabilities.”

“I am very concerned,” he stated, “that our strategy is too reliant on defensive measures in cyber space, and believe we need to develop the capability to go on the offense as well ... I believe that cyber warfare will be the key battlefield of the 21st century, and I am concerned about our ability to fight and win in this new domain.”

Two strange things stick out in this statement—which, by the way, was not an off-the-cuff remark but a formal appendage to a report on the defense authorization bill by the Senate Armed Services Committee, where McCain is the top-ranking Republican.

First, where has McCain been for the last week or so? Newspapers and cable shows have been screaming with reports of President Obama’s cyber campaign to wreak havoc on Iran’s nuclear program. A new book, *Confront and Conceal*, by New York Times reporter David Sanger, reveals that the campaign is code-named “Olympic Games” and that it’s been going on for quite a while. That is to say, we have “offensive cybercapabilities” in spades. Since the establishment of U.S. Cyber Command, in 2009, the generals in charge have sought offensive capabilities explicitly.

Second, what does McCain mean by “our ability to fight and win in this new domain” of cyberwarfare? Does he have any idea what he’s talking about? Here, McCain is not alone in his vagueness; this is something that very few higher-ups seem as yet to have grasped.

McCain may be overstating matters in calling cyberspace “the key battlefield of the 21st century,” but it’s no exaggeration to view Obama’s cyber campaign against Iran—which has aimed to disrupt the country’s uranium-enrichment program through logic bombs, viruses, and other manipulations of its computer networks—as crossing a new threshold in modern warfare.

According to Sanger’s account, Obama was well aware he was treading new ground when he made his first breach, obtaining assurances from his commanders that the cyberassault on the centrifuges would have no effect on nearby hospitals or other civilian enterprises. This is good to know. It’s reminiscent of nuclear war games in the late 1950s and early ’60s, when the players tried to limit the attacks and retaliations so that the bombs and warheads landed only on military targets, not on population centers.

There are differences, of course. For one, nukes would have killed millions of people, no matter how “limited” the attack, whereas logic bombs at worst destroy enterprises (which, depending on the enterprise, can indirectly kill lots of people, but still, there’s a big difference). For another (and this is an astonishing thing), for the first decade of the nuclear age, the people in charge—from the White House to the Pentagon to the Strategic Air Command on down—had no interest in limiting the damage. As late as 1960, this was the official U.S. war plan: If the Soviets launched an attack on Western Europe or some other part of the Free World, even if they did so only with conventional armies, even if they didn’t fire a single atomic weapon, the United States was to unleash its entire arsenal of nuclear weapons against every target—civilian and military—in the Soviet Union, Eastern Europe, and China. This amounted to 3,423 nuclear bombs and warheads, totaling 7,847 megatons (or 7.8 billion tons) of explosive power, against 654 targets (a mix of military bases and urban-industrial factories), killing an estimated 285 million people and injuring 40 million more in the Soviet Union alone. (These numbers come from official documents that I got declassified while researching my 1983 book, *The Wizards of Armageddon*.)

This was the deadly math of what President Dwight Eisenhower called “massive retaliation.” In the late ’50s, a group of defense analysts, many of them at the RAND Corp., thought about ways to reduce the likelihood of nuclear war—specifically, to make a nuclear attack less tempting for the enemy to contemplate—and to limit the damage of such a war if it erupted anyway. When President John F. Kennedy took office in 1961, his secretary of defense, Robert McNamara, filled key positions with some of these RAND analysts—the “whiz kids,” as they came to be called—and translated their ideas into policy.

Some results: burying ICBMs in underground, blast-resistant silos, to make them less vulnerable to attack (thus making a nuclear first-strike less tempting in the minds of enemies); changing the war plan, to give the president a variety of options (for instance, enabling him to hit only the other side’s missiles and airbases, while avoiding its cities); and, later on in the decade, creating U.S.-Soviet forums where “confidence-building measures” and “rules-of-the-road” could be discussed (thus relaxing a broad spectrum of suspicions).

Cyberwar is very different from nuclear war: less destructive but also less tangible. Yet they’re similar in one important way: It is illusory to talk about “winning” either.

And this is where McCain’s vague talk of fighting and winning in the cyber domain gets a bit loopy. It’s not unlike the

talk, common among Air Force generals in the 1950s and '60s (and a few hyperactive civilian defense intellectuals in the Reagan era of the '80s), of fighting and winning a nuclear war. (Think Gen. Buck Turgidson in *Dr. Strangelove*: "I'm not saying we won't get our hair mussed, but 10 to 20 million [dead] tops!")

The problem with the two wars is the same: We don't have a monopoly of the weapons. At least by the early 1960s, if the United States had attacked the Soviet Union with nukes, the Soviets would have had enough nukes left over to strike back, if not precisely "in kind," then with a degree of damage that any sane person would deem unacceptable. This was the heart of nuclear deterrence: You kill me, I kill you; therefore, you won't kill me.

Actually, the situation for us is worse with cyberwarfare. Because our social and economic structures are far more dependent on computer networks than those in any other country, a major cyberattack would do far more damage to us. Therefore, the situation in the cyber domain is more like this: We hurt you; you cripple us. That being the case, an offensive cyber strategy amounts to a suicidal trap.

Two years ago, Richard Clarke, the former White House counter-terrorism chief, wrote a book called *Cyber War* that dealt precisely with these dilemmas. At the time, I wrote that it "may be the most important book about national-security policy in the last several years," and I'd say it again, more forcefully, today.

Clarke meant the book, explicitly, as an attempt to apply the classic principles of nuclear deterrence—as laid out in such works as Bernard Brodie's *The Absolute Weapon*, Albert Wohlstetter's famous *Foreign Affairs* article "The Delicate Balance of Terror," Thomas Schelling's *The Strategy of Conflict*, Herman Kahn's *On Thermonuclear War*, and William Kaufmann's "Counterforce" briefings—to the impending cyber era.

His worry wasn't (and isn't) that the Chinese (or whoever) will one day, all of a sudden, set off the "logic bombs" that they've embedded throughout our computer-dependent power grids and financial networks—any more than the more sophisticated strategists of the 1950s and '60s thought the Russians might, out of the blue, launch a nuclear first strike.

Rather, the issue is how foes might leverage their cyberwar assets to an advantage in a crisis—and what the United States needs to do, ahead of time, to nullify that advantage. For instance, let's say China puts a move on Taiwan or the South China Sea—and threatens to trigger a power blackout in every American city if we interfere. In this sort of crisis, threatening to "retaliate in kind"—that is, to unleash John McCain's "offensive capabilities"—would have little effect. What we need, Clarke wrote in his book, is "a credible defense," which would cast doubt in the minds of potential attackers that their cyberattack would knock us out or paralyze the president with fear.

Clarke devised some modest proposals: for instance, requiring the largest Internet service providers to monitor traffic for logic bombs and tightening access to the power grid. Those seemed like no-brainers. Other, more ambitious ideas: negotiating a no-first-use agreement on cyberattacks; extending the Geneva Accords to ban attacks on purely civilian targets, such as power grids; establishing an international forum outlawing certain kinds of cyberattacks and requiring "obligations to assist" in finding and punishing those who had violated the code.

For the moment, none of this matters: Iran doesn't have the cyberware to retaliate against "Olympic Games." But it might someday, and meanwhile other nations do, as many as 20 of them according to Clarke, including potential foes that some future president might feel tempted to target with a cyber assault. Then these kinds of issues will matter, and it would be good to have thought them through and prepared.

According to Sanger's book, Obama did think through some of these issues, attempted to limit the damage—not just for humanitarian reasons, but also to set a pattern, to send a signal, that if warfare is to start creeping across the other side of the cyber line, there should be limits. The targets should be strictly military and very precise, and here are some ways—he was showing everyone by his actions—to keep things limited.

There was no putting Einstein's genie back in the bottle, and there's no putting back the cyber genie, either. But the early nuclear strategists had ideas on controlling this genie, ideas that have relevance for the new one, too—except for one thing: nearly everything about the cyber genie is very highly classified. Everything was classified about the nuclear game, too, and the RAND strategists all had top-secret security clearances. But back in the late 1950s, if you were into nuclear strategy, there weren't many job options that didn't carry a security clearance. Now, though, the people who might have the most creative ideas on cybersecurity are making very big money in the commercial wings of the computer business. The best ideas aren't going to come from large defense corporations; they're going to come from a smattering of 25-year-old geeks fresh out of MIT or CalTech. The government has to draw their minds in, and the only way to do that is to ease up on the security regulations. Obviously, operational details have to be kept secret,

but the ideas need to flow freely. Cyber Command needs to open up.

Here's another area where John McCain is missing the point. He's recently been pushing for hearings to investigate the leaking of Operation "Olympic Games" to David Sanger. It would be more useful—for McCain's expressed goals—to hold hearings on how to lure the next Gates, Jobs, and Zuckerberg not just to expand the world of cyberspace but to help keep it secure.

Christmas list (2012-07-05 16:55)

Howdy everybody, I'm posting my Christmas list early. I'm not getting all of this, but it makes a nice list.

1. Nintendo Wii U

This is self explanatory. The most popular videogame console was the Wii at one point.

2. Super Mario Bros. U

3. Sennheiser HD 558

Audiophile-grade high performance headphones

Twist and lock single-sided cable eliminates tangles and simplifies exchanges

Gold plated 1/4" plug with 1/8" adapter

Highly optimized field strengthened neodymium ferrous magnet system

Internal Sound Reflector immerses the listener in rich audio

Twist and lock single sided cable eliminates tangles and simplifies exchanges

Right now, I have a single pair of Sennheiser HD 545

4. Canon EOS Rebel T3 12.2 MP

12.2MP APS-C CMOS Sensor, 18-55 EF-S Lens NOT Included (Taken out of the Box)
SD/SDHC/SDXC Memory Card Slot, DIGIC 4 Imaging Processor
2.7" Clear View LCD, 720p HD Movie Mode
100-6400 ISO, Compatible with Canon EF and EF-S Lenses
63 Zone Dual-Layer System / 9 Point AF, 3 fps Continuous Shooting
Nice Digic 4 SLR camera. The Rebel XSi I use is very nice.

My Fermi Linux 6.2 running Virtual Box (2012-07-05 20:12)

Pretty stable OS. Runs everything that Cent OS would thus far. It's Cent OS with professional security enhancements customized by wise CERN employees.

RINOs are obese unicorns (2012-07-11 20:42)

1. Sen. Lincoln Chafee (R.I.)

Once approached by Democratic Leader Harry Reid to switch parties, Chafee has long supported liberal policies. He backs legal abortion, gay rights, federal-funded health care, strict environmental protections and a higher minimum wage. Opposes ANWR drilling. Also was the only Republican in Congress not to endorse the President's reelection and one of three who tried to gut Bush's tax cuts.

2. Sen. Olympia Snowe (Maine)

A self-described "centrist," Snowe scored a 100 % pro-choice voting record as scored by NARAL and consistently votes with Democrats on social issues.

3. Sen. Arlen Specter (Pa.)

"Snarlin' Arlen" warned Bush not to nominate judges who might overturn Roe v. Wade, joined Chafee reducing tax cuts and supported Democrats on the Comprehensive Test Ban Treaty, HMO and overtime regulation. Also opposed school choice in Washington, D.C.

4. Sen. Susan Collins (Maine)

Voted with liberals on the 1999 tax cut, campaign finance reform and the partial-birth abortion ban. Also advocated "pay-as-you-go" tax cuts with spending increases in 2004, leading to a budget never agreed upon between the House and Senate.

5. Rep. Christopher Shays (Conn.)

He led the House fight for McCain-Feingold campaign finance "reform." He's also prone to back environmental causes, gun control and abortion rights. He had no GOP challenger in 2004, but narrowly escaped defeat, 52 % to 48 %, by a Democratic opponent in the general election.

6. Gov. George Pataki (N.Y.)

Helped unions raise pay and unionize Indian casinos. Has said, "I believe in a limited government, low taxes, a tough approach to crime. ... But I also believe in an activist government. I'm not one of those laissez-faire types."

7. Rep. Sherwood Boehlert (N.Y.)

Over the course of his 23-year career, he's gained considerable power (chairman of the Science Committee), despite amassing one of the most liberal voting records of any House Republican. Fought back conservative challengers in 2000 and 2002 and could face a GOP challenge in '06.

8. Gov. Mitt Romney (Mass.)

Has said, "I believe that abortion should be safe and legal in this country." Supports civil unions and stringent gun laws. After visiting Houston, he criticized the city's aesthetics, saying, "This is what happens when you don't have zoning."

9. Rep. Michael Castle (Del.)

As president of the moderate Republican Main Street Partnership and key player in the so-called Tuesday Group lunches, he is a ring-leader of RINOs. He's teamed with Democrats to make federal funding of embryonic stem cell research one of his top priorities.

10. Rep. Jim Leach (Iowa)

One of only six House Republicans to vote against the Iraq War resolution in 2002, he was also the only Republican to vote against President Bush's 2003 tax cuts. His support for environmental causes and abortion rights has won him liberal fans.

Is Canada the world's next superpower? (2012-07-16 16:01)

Since Iceland's financial collapse in 2008, the country has debated whether it should stick with the krona or adopt the currency of another country.

The obvious choice seems to be for Iceland to submit to, say, oil-rich Norway or maybe even join the EU and adopt the euro.

But another currency has entered the debate. And it's a little "loonie."

That's right: Iceland might adopt the Canadian dollar as its official currency.

There are precedents, of course – El Salvador and Ecuador have both adopted the U.S. dollar in the past – and, on paper, the decision seems to make sense for both Canada and Iceland. Iceland would have a currency overseen by a very strong central bank. Canada would get even more influence in the Arctic region. And it would probably increase foreign trade for both countries.

And Canada might be into it.

On Friday, Alan Bones, Canada's ambassador to Iceland, said, "What we know about the nature of the final agreement depends very much on the expectations of both countries. But in a straightforward unilateral adopt of the Canadian dollar by Iceland, where it's clear there's no input into monetary policy, then we'd be certainly open to discussing the issue."

So, should the U.S. be worried? Is Canada really a rising imperial superpower?

We took a closer look at our neighbor to the north, and this is what we found: Canada has the 10th-largest economy in the world. Its unemployment rate is 7.6 %, compared with our 8.3. Canada has a Triple-A (Eh!) rating. And, after the U.S. delayed the Keystone pipeline, Prime Minister Stephen Harper went to China to discuss redirecting its oil (Canada is the sixth-largest oil-producing nation in the world) to the Pacific coast – where China's ships are waiting. But maybe the worst part: The person who brought this story to my attention is a Canadian. They really are everywhere.

Do you think Canada could really be a world superpower? Should the U.S. be worried that Canada is bailing out other countries? What are your thoughts on the pipeline?

Wii U Pro Classic Controller (2012-07-17 03:15)

Nintendo brilliantly is making a sequel to the classic controller and it will be for Wii U games. It looks like a Dreamcast controller with two analogue sticks on top. This is better than the wand and the packaged controller, because who likes ot look at the screen, anybody? Anything closer to the Dual Shock 2 or Xbox's controller S is a great idea in my opinion.

I wonder if there is going to be a Super Mario Galaxy 3, three Legend of Zelda, Call of duty modern warfare, metroid prime 4, Grand eternal darkness 2, Sins and Punishment 3, Radiant Silvergun 2, Chrono Cross 2, Final Fantasy Tactics, Final Fantasy XII-3, Final Fantasy VII-2, Grandia 4, Final Fantasy VIII-2, some Gran Turismo game (N64 had one), .

I own CentOS 6.3 and Scientific Linux 6.3 (2012-07-20 17:07)

>

Scientific Linux 6.3 and Cent OS 6.3 both have 2.6.32.279 kernel. Cent OS is the most popular web server and I own

the latest version. Scientific Linux has enhancements like NTFS-3g, Andrew File System, and more security.

Cent OS 6.3 delivers:

- Significant improvements in resource management and high availability.
- New features aimed at storage and file system performance.
- Identity management functionality.
- Technology integration with VMware and Microsoft environments.

The key benefits for organizations deploying CentOS 6.3 are:

- Greater efficiency via resource management and performance optimization.
- Enhanced business agility through additional security enhancements.
- More flexibility for virtualized and clustered environments.
- officially supports allocating up to 160 processor cores and 2TB of working memory to guest systems; previously, the distribution only supported 64 cores and 512GB of RAM
- support for SR-IOV-capable (Single Root I/O Virtualisation) networking hardware
- evice Mapper, which is used by the Logical Volume Manager, now offers the Thin Provisioning features that were integrated in Linux 3.2
- SCSI target via Fibre Channel over Ethernet (FCoE)
- features that allow RAID levels 4, 5, and 6 to be implemented via the Logical Volume Manager (LVM); to do so, LVM accesses the kernel's software RAID code, which is typically managed via Mdmadm
- graphics drivers in the second release candidate of Linux 3.3
- the RDRAND x86 instruction support

SHUMPs VI: Radiant Silvergun and Battle Garegga (2012-07-23 03:43)

I had these off Megaupload (defunct) and they are very well designed Shumps for Sega Saturn, except I play them in the modded Sega Saturn. Sega Saturn has mod chip. These are expensive games, 130 dollars USD. Working Designs was supposed to publish Radiant Silvergun in United States in November 1998. They hadn't. Silhouette Mirage was published by Working Designs in 1998 which was a mistake. Working Designs could of even published Radiant Silvergun in US instead of stupid Magic Knight Rayearth!

Capcom was supposed to publish Battle Garegga for Sega Saturn in 1997. Capcom published 1944 instead. Battle Garegga is a better videogame than Radiant Silvergun, yet this is unknown. This is due to Gunstar Heroes on Sega Genesis, Ikarga on Nintendo Gamecube. Battle Garegga is supposed to be the best space shoot em up for 32-bit consoles.

Fuduntu is still Gnome 2.32-based Linux Distro (2012-07-24 18:11)

I found this Linux distribution that has an idea that it needs to be based on Gnome 2.32.2.1 forever. This distro is called Fuduntu. The advantage of this is you can update all the programs, kernel, x.org, drivers. Gnome 2.32.2 is just reliable, not buggy and PC-BSD Gnome is based on 2.32.2. PC-BSD 10.0 is going to go with MATE 1.x after Gnome 2.32.1.

I would rather go with Scientific Linux 6.3, because the kernel is updated off the best commercial server. SL 6.3 kernel has many kernel 3.3 features anyhow.

I believe Scientific Linux 7.0 should be based off MATE 1.4 or MATE 1.6.

SHMUPs VII: Legit Espgaluda, Mushihimesama, Space Megaforce, UN Squadron (2012-07-26 15:37)

I heard of these six years ago when Radiant Silvergun was still mentioned in Wisconsin. That was 4 years before the Xbox Live version came out. So I got the fourth and fifth best SHMUPs Mushihimesama and Espgaluda. I think it has something to do with CAVE. The sequels were region free on Xbox 360. I had Mushihimesama and Espgaluda on DVDR since 2009 and played them on a modchipped Playstation 2 since 2009.

I have no idea why Ikaruga was published by Atari, but Mushihimesama or Espgaluda never had American publisher like Atari. Beats me.

ESPGaluda has a basic shot for use when tapping the fire button, and a beam shot that slows your movement speed down, but does more damage when the fire button is depressed. Your hit box is small, which allows you to weave in and out of narrow holes in bullet patterns – something that really makes a tough battle even more intense and rewarding. However, in addition to the typical Cave features is a special ability: the ability to slow down bullets with your ESP powers. When in normal mode, you collect gems for killing enemies. These gems are then used up when you switch to the slower bullet mode. While in this mode, any enemy killed will have its bullets turned into points (a way to really boost score) and you will automatically use a bomb if hit. However, if you let your gem supply run out in this mode, the bullets will turn a darker shade of pink, and the speed will be increased beyond that of the normal game.

I also found Space Megaforce, and UN Squadron and bought both for Super NES today. Space Megaforce was \$35 and UN Squadron was \$7. Space Megaforce is the top SNES game somewhere.

Birthday money Sapphire Radeon HD 6970 2 GB??? (2012-07-30 11:48)

Okay, so I already have a Radeon HD 5970 to fall back on, but I could purchase this graphics video card for birthday. Last birthday, I got \$260 for a Playstation Vita. If I got this card, I could have a DirectX 11 GPU in the Core 2 Quad Q9550 PC, and DirectX 11.1 GPU in the Core i7 980 PC. The advantage of this is that I could upgrade my PC in 2012, get a Canon DSLR camera for Christmas and not worry about a GPU for three years. I could run any Unreal Engine 4 game engine. I could run a Unreal Engine 4 game now. I seems like I am left in the dust as far as PC towers. Towers last a long time, because there are so many case fans and oversized CPU fans in them. I could anyways get a Wii U myself and it would less money than a Radeon HD 6970. Christmas 2013 wouldn't be a good year to buy a GPU, because of Xbox 720 and Playstation 4 launch.

SHMUPs Episode VIII: Eliminate Down (2012-07-30 15:47)

I only knew about this game for a month! I knew about MUSHA for years. I didn't know that Eliminate Down beat MUSHA in score and it's \$50 to \$150 cheaper. I played it on the Caanoo first and it's really fun for a SHMUP. It cost \$75 with case (I never get cases anymore). It's cheaper, because it is a Genesis reproduction. I don't know why MUSHA isn't reproduced???? Sellers price gouge MUSHA

SHMUPs IX: Bought Battle Garegga 3: Ibara today (2012-08-04 15:40)

I bought the most expensive Playstation 2 SHMUP available, Ibara. It got a nice score of 9.5 and I can play it in my Modchipped PS2. It was \$150 and no region free Xbox 360 port! Shame on Cave for not making this beautiful game region free. Battle Garegga 2 was a the arcade only game Battle Bakraid in 1999.

ans of cult developer Raizing could only lament the end of an era in the year 2000, when the team was folded into sister company 8ing and ceased producing its own games. Some time down the line, though, former rival Cave decided to bring Raizing bigwig Shinobu Yagawa on board for a new shooter, and Ibara (“rose”, “thorn”, or “briar”) was the result of this once-unlikely partnership. As might be expected, in many ways this isn’t really a “Cave game”; it’s best-described as a spiritual sequel to Raizing’s iconic Battle Garegga. Once again the main keys to scoring (and, by extension, survival) are expending your bombs (which you must “build” by collecting shards) on specific score-rich targets, dismantling (and greatly angering) the bosses, and weaving through enemy fire to snatch falling medals. The game’s “rank” level, which bumps up the challenge, tends to increase quickly, and the only way to knock it back down a peg is to die, so you’d better keep racking up those points (and resulting extra lives) if you want to last very long. What videogames should i buy, taking suggestions.

I pirated this game 14 months ago for modchipped PS2.

installed Opensuse 12.2 RC2, waiting for 12.2 RTM (2012-08-06 08:25)

I got openSUSE 12.2 at college, and split them up in 200 MB 7z archives for my thumb drive. It comes with KDE 4.8.2, Gnome 3.4.1 XFCE 4.9 and kernel 3.4.6-1. I've only installed 3.3 on my laptop(s).

KDE 4.8 is a little less buggy than KDE 4.7.2 in openSuse 12.1. KDE applications released today include Dolphin with its new display engine, new Kate features and improvements, Gwenview with functional and visual improvements. KSecretService is a new framework for sharing saved passwords and other credentials between a wider range of applications. KDE Telepathy —the new real-time communication and collaboration framework for KDE Workspaces with Speex VoIP for other Linux users. Why not use Google talk instead? Google Talk would get integrated with Google+. There is no "KDE+". Plasma Components offer an efficient, elegant and powerful set of widgets, which integrate well with the underlying platform. Combined with Plasma's visual and data integration components, application development has never been easier, more fun and powerful. Plasma Components automatically adapt to the device they are used on, making it easy to share code between Desktop and mobile and touch-based applications and allowing deployment and usability on a wider range of target devices.

KDE 4.8.2

Unfortunately, OpenSuse 12.2 didn't go with MATE 1.2, an enhancement of Gnome 2 nor did it go with Cinnamon 1.4, enhancement of Gnome 3.x. Gnome 3.4.x new feature is the Network password dialogs, including those for VPN passwords, present in Gnome 2.x. Our built in screen recorder now produces smoother videos while also using less system resources. To use it, simply press Control+Shift+Alt+R using Ogg Theora.

Gnome 3.4 has improved network panel layout, which now allows you to forget the configuration of individual networks. A better looking power panel, which includes a redesigned status section. Greatly enhanced Wacom graphics tablet support, including calibration and button mapping, as well as the new ability to configure multiple tablets. Easier navigation thanks to the renaming of some panels and an updated 'All Settings' button. This provides a really nice way to do video calling (Ogg Theora) , and it is fully integrated into GNOME 3. System Monitor has received Control Groups support.

Kernel 3.4 has graphics support for the GeForce GTX 680 and Radeon HD 68xx. Xen Hypervisor to adjust the processor speed or send the CPU into a short-term sleep state when using Linux 3.4 on the Dom0. The MD software RAID code can now resize RAID 10 arrays in such a way that, for example, extra space in component devices can be used after the underlying disks have been exchanged for larger ones. As usual, there are a number of improvements to the drivers and infrastructure for DVB hardware, including support for the KWorld PC150-U ATSC hybrid tuner card, as well as for the AzureWave 6007 and related USB 2.0 DVB-T/C hardware. A new Realtek RTL2831U driver for DVB-T hardware has also been added. The Brcmfmac Broadcom WLAN driver now works with the Bcm43235/6/8 USB chips, while the rt2x00 Ralink driver, starting with 3.4, supports the RT5372 WLAN chipset. The rtl8187 driver, responsible for the Realtek chip with the same name, now provides ad hoc support. OpenSuse 12.2 also provides basic support for ACPI 5.0. The Ext4 code gained a new mechanism for resizing Ext4 filesystems. The new mechanism needs only 3.5 seconds to resize a 20 GB drive to 230 GB. The MD code responsible for software RAIDs gained functions (for example 1, 2) to copy data currently on one storage device to another so that the first can later be removed. This "hot replace" reduces the danger of losing data when changing disks that are part of the RAID, since it avoids the rebuild (which creates a new version of the redundant data on the new data volume) that has previously been necessary for such an exchange. A rebuild is not without its risks, since the data has to be read from the remaining data volumes, which could have developed corrupt areas; in addition, except for a RAID 6, there is no redundancy during a rebuild. The kernel is able to perform a "hot replace" for RAID levels 1, 4, 5, 6, and 10. The DRM/KMS driver for Intel GPUs will enable the very efficient and Intel-specific RC6 graphics power-saving feature by default. The kernel developers have extended the TCP stack of Linux 3.2 to provide "Proportional Rate Reduction" (PRR) support. The Ext4 filesystem now supports big

allocation blocks. The technique, known as bigalloc, bundles the 4K blocks used to store data into clusters of up to 1 MB. This reduces administrative overhead when saving large files and should significantly improve performance in some scenarios. With the help of the new CFS bandwidth controller and the control groups (cgroups) infrastructure, it is now possible to cap process group CPU time. One use case of this is to permit cloud operators to ensure that users are not able to consume more CPU resources than they have paid for.

I don't get any FFMPEG decoders or VLC 2.x like Linux Mint 13 which is obviously GPLed. What is wrong with these Linux developers?

PC-BSD 9.1 Isotope Edition.... (2012-08-06 09:49)

Wonders if PC-BSD 9.1 will also have a "Isotope Edition" with KDE, Gnome, XFCE, and LXDE on DVD5.

Developers too lazy to change wallpaper in 9.1

Changes since the previous snapshot:

FreeBSD 9.1-BETA1

KDE 4.8.4

Support for Warden to create Linux Jails (Debian & Gentoo support included)

Fixed a bug with mouse cursor fonts changing over some tray apps

Correct some bugs with mouse not being detected after display wizard

Add new "TrueOS" server option, alongside FreeBSD Vanilla.

Display detected video resolution / driver on confirmation screen

Add new IPv4 / IPv6 validation to address fields

Fix bugs exporting / importing jails via Warden

Add new Hardware Compatibility Check GUI, which is available during install and via Control Panel

Add new Sound Configuration GUI, which lets user select and test different sound devices

Add NVIDIA legacy drivers for cards older than 8-10 years (32bit only)

Added option to "mount/clone" jail snapshots via the Warden

Highlights for the upcoming 9.1-Release:

FreeBSD 9.1

KDE 4.8.4

New system installer! Greatly simplified for desktop and server installs.

New "PC-BSD Server" installation option. Includes command-line utilities like pbi-manager, warden, metapkgmanager and more.

Support for ZFS mirror / raidz(1,2,3) during installation.

Support for SWAP on ZFS, allowing entire disk ZFS installation.

Support for setting additional ZFS data-set options, such as compression, noexec, etc.

Warden jail management integrated into system. Allows creating jails via GUI, adding packages and other administration.

Support for Warden to create Linux Jails

New "Sound Configuration GUI"

New "Hardware compatibility" GUI

First boot setup wizard allows OEM installs to be easily performed.

New Bluetooth pairing tray / GUI utilities.

New AppCafe improvements and preferences

Improvements to wifi utility

Fixed bug causing untranslated strings to show up empty.

Numerous bug-fixes to PC-BSD related utilities

Support for creating PXE boot server for remote desktop and installation.

ZFS beadm support

PC-BSD 9.1 has this pbi system that is a front end for FreeBSD Ports, designed with KDE QT4 C++ and has both base and dependencies. It's counterpart to MAC OS X's dmg files. DMG installer is where pbi came from in the first place.

Wii U will be next generation Sega Saturn Thoughts? (2012-08-07 03:20)

With the Wii U, Nintendo is aiming for the midpoint in order to capture both audiences equally. Sounds like a great strategy, but I've noticed things that may condemn it to the same fate as it's predecessor. Or worse.

Right off the bat, the Wii U does not have the same wow-factor that the Wii had. It's pretty safe to say that families are probably not going to rush out and buy them, unless prompted by their children. Nintendo has instantly lost a huge percentage of that crowd by making the console so iterative yet incompatible. That demographic is largely ruled out, so instead they are forced to turn back to us.

The first thing I thought when I saw that new controller was "How are they going to make that fun?". If the original Wii wasn't covered in so much snake oil and confusion I would have asked the same thing. What could one possibly do with a controller with a tablet interface, a front facing camera, IR sensors, and accelerometers? The answer is, of course, a million and one incredibly shallow things. The examples that Nintendo showed in their press conference were a small sampling of those things. Throwing shurikens, playing board games, assassinating mii's, etc. These are not games, these are applications. 'We' do not want applications, 'We' want games. And without that, what is left of the Wii U? Nothing that I don't already have. Well, except special inventory management in Darksiders 2, but I'll live. When they first showed the original Wii, I was optimistic. "Oh, what excellent technology! Some very creative people will make something very smart that I'll love!". That never happened, and never will. They have trolled the creative depths for years now and come up with nothing better than Wii Sports Resort, all of it ending up on a spectrum between "gimmicky" and "a ps2 game on a bad controller". With the Wii U, this metric has simply changed to "gimmicky" and "a 360 game". It's telling to me that Nintendo usually only has a smattering of it's own technology present in it's own games. It shows that they know traditional games allow for so much more than their tech can provide by itself. So why would 'We' want a U?

'We' don't.

But that is simply my own logic as to why the Wii U is probably going to be useless to you. It's still admittedly a great

big question mark as to what the general adoption rate will be, but I think things like "The Wii U is an 'inbetween' system," and "We still **** hate motion controls" will dissuade many of 'Us'. And as I've shown, the Wii cannot do without us, especially not this time round. If we don't pick up and support the Wii U, third party support will drop like a rock for want of sales and the only ones that will profit in the end will be, once again, Nintendo, garnering sales from two demographics that are at odds with each other.

DoDonPachi Saidaioujou Region Free or US release (2012-08-09 00:21)

The Latest DoDonPachi from Cave is a cross between DoDonPachi Resurrection and DoDonPachi Maximum. Either way, it is playable by US Xbox 360s. Do Don Pachi is a hardcore SHMUP.

Spring 2013 release date.

Unfortunately, Dodonpachi Dai-Ou-Jou is not region free by Rising Star Games of UK for Xbox 360.

I'm glad to say that I bought Dai-Ou-Jou for \$80 for PS2 so I can play it with my Modchip (or PCSX2)

One of the hardest games ever made. It is supposed to be around 8.0 out of 10 (NTSC-UK) or thereabouts.

Top Trance songs (2012-08-11 17:04)

Humate - Love Simulation (Paul van Dyk's Love mix) [1993] [Ibiza trance] It's amazing how little this track loses its loveliness with repeat listens. I've had it for 6 years now, and I still love it just as much as I did when it floored me on the first listen. Even the other top 10 tracks (while still amazing) have diminished in some ways with compulsive listening, but this one remains the shining gem at the top of the trance genre. This perfectly captures the beauty of a tropical sunset on a peaceful deserted island, and to this day never fails to evoke such a scene. The Age of Love - Age of Love (Jam & Spoon's Watch out for Stella mix) [1992] [classic trance] This is often erroneously called the first trance tune of all time, including by me for a very long time. Well, it wasn't. There was no "first trance tune." It seems to have slowly coalesced out of the Belgian new beat, acid house, techno, and euro-house miasma around at the time. You can look for related tracks in each of these early scenes, but none of them are "trance" per se, they clearly fall into their respective styles. And the first artists who actually set out to make "trance" were mimicking a genre that was already defined. So where do you draw the line? You don't. There was no big bang. Also, the so-called "original mix" available pretty much everywhere is almost universally actually the (admittedly superior) Jam & Spoon remix. I finally found the real original mixes, and they're not trance at all - they're inarguably new beat. You can almost hear some trance in there, but it's a seed, at best. That said, this version is a fantastic track, and still one of trance's first. It's beautiful, ethereal, and above all, entrancing. Energy 52 - Cafe Del Mar (Three N' One mix) [1998] [anthem trance/Ibiza trance] The track that defines everything that an Ibiza anthem is, full of all of the excess and bombast of the island: pure dancable joy. The track's central hook is a long, arpeggiated melody looping such that the beginning and end melt together into an endless sphere. It sounds like sped-up 70's minimalism run through a 90's dark trance synth with a sub-tribal feel (it's the beats that do this). I'll admit, the build-up is a little bit cliché by now, but it wasn't

really at the time, and for second-wave trance, it's as creative as it's going to get, and more than compensated by the spot-on anthem. In a not so surprising twist, this was initially written by one of the fathers of modern trance (Cosmic Baby), back in 1993 (they were always better at trance than the bedroom nerds and the corporate pop machine). It has gotten another remix every single year since 93, most of which are picked up by trance jocks and many of which go back on the club charts (the best is undoubtedly 1997's chart-topping Three N' One remix (although some prefer the 1998 Nalin & Kane version, and classic trance addicts will love the original)). Future Sound of London - Papua New Guinea [1991] [ambient trance/classic trance] Released in 1991, this song wasn't even intended to be trance - no one even used the word yet (although there was a fledgling sound growing in the underground house, rave, and techno scenes). It was meant to be ambient breaks, but "Papua New Guinea's" atmosphere was like little other electronic dance released at the time - ethereal, spacy, almost angelic, but still dancefloor-worthy, catchy, and even relaxing. The song instantly became a trance classic once the genre was brought into official existence in 1993, and deservedly so. Like it's predecessor "Age of Love," even today it can be played without sounding the slightest bit dated. {arguable - ambient breaks } Underworld - Born Slippy (NUXX). [1995] [classic trance/hard trance] A melodic trance tune with stream-of-consciousness lyrics that become stranger with each listen, mainly because they never really had any actual internal logic to begin with. The melody is unforgettably catchy, and contains a nice twist in the middle, in which it goes from being a wistful and pretty little ambient trancer, to a hard and abrasive swedish techno stormer, and pulls both off better than just about anything in either genre. Surprisingly, especially with this being, you know, actually good, this was a huge hit in Europe (it went to number 2 on the world chart in 1996-97), and gets at least two new remixes every year, at least one of which always goes back on the club charts (hopefully 2006 will be an exception? Honestly, they're never going to top the original). So, not only is it one of the best, it's also the most popular to still retain credibility. {arguable - melodic techno(?) } Sasha - Xpander [1999] [progressive trance] Perfect progressive trance. A melody that, like the last 2 tracks, is atmospheric, loops on itself, and endlessly contagious, without seeming repetitive. This song is absorbing - the feeling throughout is impossible to describe, since like I said before...dancing about architecture. Just download the track. It's incredible. (Was another mega-European hit. I don't know the details specifically, but it doesn't matter). Nalin & Kane - Beachball [1996] [ibiza trance] Gorgeous, elegant, and never tiring. It's quite possible that I've listened to this track more times than any other, probably my personal favorite. Built out of tribal, yet melodic beats (the "Nalin and Kane sound"), relaxing and inobtrusive vocals, and a slow, subtle build that takes its time to breakdown. When it does breakdown, air strings and seagulls wash and flow around each other as if musically taking flight to a Mediterranean sky over a sunset-golden beach. When the breakdown ends, "Beachball" slowly floats back to earth, before spending the remainder of the track rippling back and forth between the sky and the sand. {arguable - ibiza house } Paragliders - Paraglide [1993] [classic trance] DnTel - (This is) The Dream of Evan and Chan (Superpitcher Kompakt remix) [2002] [minimal trance] This is probably the only trance track ever created with vocals worth listening to. But it doesn't rest on them, just allowing them to sparsely resonant in a minimal nothing, it raises them, gently bringing them to soaring heights with gorgeous melodies that slowly drown out the surreal beauty of the evocative lyrics. Eventually the glistening bells overtake the words entirely, taking the already flying track into the stratosphere. It's the perfect representative of minimal trance. {arguable: tech-house/progressive house/microhouse } Hardfloor - Acperience 1 [1992] [acid trance/classic trance] {arguable - acid } Hybrid - Symphony [1997] [orchestral trance] Wow. Forget Adagio for Strings, forget Protect Your Mind, forget ****ing Airwave, symphonic trance was created and destroyed with this track. Everything trance is supposed to make you feel, and almost everything classical is supposed to do can be found here in this amazing song. Easy to dance to, creative beats (break-trance, so they actually put some thought into them), more melodies than you can possibly count, and all this without sounding crowded or overstuffed; all of it original. They even did it without overusing the breakdown. Fantastic, it completely lives up to its title. Aphex Twin - Didgeridoo [1992] [acid trance] This track is simultaneously hard, twisted and beautiful, which is something I would have considered a nearly impossible feat until I heard this, and despite being over 15 years old, it still sounds innovative and fresh today. Built on a foundation of Basic Channel-esque foggy acid lines, Didgeridoo manages to build and break like trance, while meandering and wandering like ambient and relentlessly pounding and squiggling like acid techno without sounding forced or mashed together. A didgeridoo sets the bassline resulting in a simultaneously relaxing, funky and dark atmosphere. It can sound like a trance anthem, a techno monster, or an ambient chilldown depending on how you listen, and it's all of those together and more, and it grows greater with each listen. Didgeridoo is undoubtedly one of the greatest trance tracks of all time. Whether

or not it's in the genre of "trance" per se is questionable (though a connecting thread is certainly there), but in the most elastic sense of entrancing dance music, it comes out pretty close to the top. {arguable - ambient acid techno(?) } Orbital - Halcyon On & On [1993] [ambient trance] {arguable - ambient techno } Chicane - Offshore [1996] [ibiza trance] {arguable - ambient house/ibiza house } Banco De Gaia - Heliopolis [1993] [classic trance/acid trance] Choice - Acid Eiffel [acid trance] {arguable - acid techno } Ame - Rej [2005] [minimal trance/neo-trance] {arguable - "minimal" } L.S.G. - Netherworld [1997] [progressive trance] Balil - Parasight [1993] [classic trance/acid trance] Salt Tank - Eugina [1996] [ibiza trance] The PQM - You Are Sleeping (Luke Chable Vocal mix) [2004] [progressive trance/deep trance] {arguable - progressive house } LSG - Hearts [1994] [classic trance/acid trance] Dance 2 Trance - We Came in Peace [1990] [classic trance] Another contender for first trance song ever created. Whether this track came first, or Age of Love is questionable, but the quality of this little masterpiece is indisputable. Almost like minimal goa, mixed with James Holden-esque progressive (but of course, it predates all of that). It's reminiscent of being on the moon, or on the surface of an alien world: exactly the way trance should sound. Underworld - Dark Train [1994] [classic trance] Infected Mushroom - Mush Mushi [goa trance/psytrance] Gabriel Ananda - Ihre Persönliche Glücksmelodie [2005] [minimal trance/neo-trance] Paul Van Dyk - For an Angel [1994] [epic trance] Metal Master - Spectrum [1992] [classic trance] Push - Strange World [2001] [anthem trance] Humate & Rabbit In The Moon - East (Opium Den Mix) [1995] [classic trance/acid trance] The MFA - The Difference it Makes [2004] [minimal trance/neo-trance] {arguable - progressive house } Cybernaut - Hydroponix [1997] [goa trance/psytrance] Datura - Yerba Del Diablo [1992] [classic trance/acid trance] {I find it's a lot like psytrance/goa trance, but this isn't a bad thing. } Three Drives - Greece 2000 [1997] [progressive trance/anthem trance] PHD - Summer Storm (Leisure Lounge Edit) [1994] [classic trance/acid trance] Jam and Spoon - Stella [1992] [ibiza trance] Hallucinogen - LSD [1994] [psytrance/goa trance] Commander Tom - Are Am Eye? [1995] [classic trance/dark trance(?)] {arguable - rave } Phobia - Phobia (DJ Hell mix) [1991/2007] [classic trance/acid trance] What actually makes the DJ Hell 2007 mix different from the 1991 original is pretty minimal (ha. ha. no.), but it seems to do the trick, elevating what was already a trance classic into the neo-trance masterpiece it was always meant to be. Really though, everything that made the track so incredible to begin with is there, and everything added on could have been created back in 1991. But it rounds it out perfectly. It's rather dark trance. The anchoring melody is simply a two note depth charge interspersed with a transmission-like voice ("let me have silence") and a strangely affecting diva wail, held down by a circular acid line that eventually dissolves into quasi-anthem territory (a la Acid Eiffel, which it actually transcends). Everything here is simple and effective, and reminiscent of floating in space past a rocky wasteland moon, no power in the ship, unable to navigate, fleeing alien depth charges. Or perhaps it's like being under the ocean on an alien planet in almost complete blackness and silence but for the occasional bursts of extraterrestrial explosives seeking to destroy your submarine, hidden in the deep, the power. This is also a flagpost of what seems to be a classic trance revival of sorts brought about by an adoring minimal community (some of whom floated out of classic trance-land in the first place, fleeing the epic anthem boom of the late 90s. You know who I mean. Sven Vath. Stephan Bodzin.) Etnica - Moon Influence [1996] [goa trance/psytrance] Yahel - Voyage [2000] [psytrance/epic trance] Binary Finary - 1998 [1998] [anthem trance] Note: 1999 and 2000 are the same track, re-released for more guiltless radioplay and club spinning. Although why this odd norm exists at all is beyond me. If you still like the track, just keep playing it. Don't buy it again with a different date stamped on the cover, just so you can label yourself "upfront." Union Jack - Red Herring [1995] [acid trance] Beanfield - Tides (Carl Craig mix) [2004] [minimal trance/neo-trance] Cybordelics - Adventures of Dama [1993] [classic trance] The Thrillseekers - Synaesthesia [1999] [epic trance] Leftfield - Phat Planet [1999] [deep trance] {arguable - progressive house } Atlantic Ocean - Waterfalls [1993] [anthem trance] {arguable - anthem house } DJ Tiesto - Suburban Train [2001] [epic trance] James Holden - Nothing (93 Returning mix) [2003] [progressive trance] Roland Appel - Dark Soldier [2007] [minimal trance/neo-trance] Efdemin - Lohn & Brot [2007] [minimal trance/neo-trance] "Minimal" has gotten so trancy this year that almost all of the best new tracks warrant (high) places on this list. This is the only trance track on the entire list that I fell in love with during the opening bar (Those first three notes are actually truly beautiful, and even if the track didn't go anywhere from there it would still warrant a place somewhere on this list as the best filler of all time). I don't even cut this track up in my iPod playlist. {arguable - minimal. But argue with me that it's really minimal and not trance at all and I'll actually beat you down. I will find out where you live, and I will beat you down. It's got breakdowns, dammit, BREAKDOWNS. Yeah, minimal. Right. } Orbital - Belfast [1992] [ambient trance] Art of Trance - Madagascar (Cygnus X mix) [1998] [epic trance/anthem trance] Gus Gus - Purple (Sasha vs. The Light mix) [1998] [progressive trance] James

Holden - Horizons [1999] [progressive trance] Cygnus X - Superstring [1994] [classic trance] Patrick Chardronnet - Eve By Day (Ripperton mix) [2006] [minimal trance/neo-trance] The Field - Over the Ice [2006] [minimal trance/neo-trance] {arguable - minimal techno(?)} Banco De Gaia - Last Train to Lhasa [1995] [classic trance/ambient trance] {arguable - ambient house/progressive house} Astral Projection - Aurora Borealis [2000] [psytrance/goa trance] PPK - Resurrection [2001] [progressive trance/anthem trance] Shakta - Lepton Head III [1996] [goa trance/psytrance] Way Out West - Mindcircus (Gabriel and Dresden mix) [2001] [progressive trance] {arguable - progressive house} Astral Projection - Mahadeva [1996] [psytrance] Like an ancient tribal ceremony, plus aliens. {arguable - psy. Immigration (2012-08-14 08:55)

The vast majority of Americans agree that our immigration system is broken. According to the Office of Immigration Statistics (OIS) Annual 2010 report, the Department of Homeland Security (DHS) apprehended 517,000 foreign nationals and removed 387,000 foreign nationals from the United States. Nonetheless, it's estimated that one out of every twenty workers is an illegal immigrant and that between 12 and 13 million illegal immigrants remain nationwide. This issue persists as a result of our flawed immigration and border security system, is an affront to the rule of law, an unacceptable security risk, and an added burden to the current state of the economy.

There are deeply held views on all sides of this issue, and rightly so. We are a nation of immigrants, and the vast majority of Americans agree that comprehensive immigration reform is long overdue. Far too many illegal immigrants continue to arrive in the United States, and those attempting to come to the country legally find themselves wrapped in endless paperwork and bureaucracy as a result. This broken immigration system does a disservice to those who play by the rules, rewards those who break them, and fails children who all-too-often fall between the cracks. Regardless of where you stand on the issue, it is clear that our current immigration system is not working.

However, I do not support amnesty for the millions of illegal immigrants already living in the United States. Any reform proposal must require that those who have disregarded the rule of law are not rewarded for their actions. In the end, I hope that with better border security and a more robust and up-to-date employee verification system, we will be able to stem the flow of illegal immigration and restore the rule of law.

DREAM Act

The Development, Relief and Education for Alien Minors (DREAM) Act, H.R. 1842 in the 112th Congress, has been introduced several times in recent years. This bill amends the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 to permit states to determine state residency for the purpose of higher education benefits. Additionally, it grants conditional permanent residency to undocumented students who entered the United States as children. While the DREAM Act has been promoted as an alternative to comprehensive reform, and I understand the points that DREAM Act supporters have raised, I believe this legislation attempts to treat a symptom – rather than the root cause – of our current problems. We must first secure the border and stem the flow of illegal immigration, and then work to increase legal immigration through an enforceable guest worker program and by developing a more secure employee verification system. I believe it would be a serious mistake to pursue piecemeal reforms like the DREAM Act without first putting in place these fundamental components of immigration reform.

Seasonal Labor

I believe that any reforms to immigration policies should include expanding access to visas for seasonal and temporary labor. Wisconsin, for example, has relied on seasonal labor for agriculture and other industries. Due to a lack of seasonal H-2B visas, some Wisconsin businesses face annual labor shortfalls. Allowing for a streamlined, safe, and efficient visa process will provide businesses with needed workers and relieve pressure on the borders.

Additionally, I believe a temporary guest worker program is one component of reform that could help us secure our borders and gain greater control of immigration. By providing a way to legally link employers with immigrant workers, we would relieve pressure on the borders from people who are coming here to seek work. This would allow us more time to pursue the people who mean to do us harm—criminals, terrorists, and drug smugglers.

A necessary component of a guest worker program is an employee verification system that allows employers to easily and accurately verify an employee's legal status in a timely manner. The faulty and cumbersome verification process continues to provide incentives for the use of fraudulent documents. To provide a system where employers and employees no longer perpetuate our illegal immigration problem, I believe that there are several principles that must be kept in mind.

First and foremost, an employee's information must be safe from identity theft. Next, any system must be accurate and secure. A verification tool that is easily fabricated will not provide the assurance required that employers are not unintentionally employing illegal aliens. Last, a verification tool must be immediate. It can cause great disruption and difficulties to ordinary Americans if they cannot get the documentation they need from the government. We must ensure that verification occurs immediately, and that employees are able to work and receive their paychecks.

New legislation addressing immigration policies should require illegal immigrants seeking a green card or citizenship to leave the United States and reapply for citizenship outside of the U.S., so that they can then re-enter the country legally, thus upholding the rule of law. Proposals like the "Z visa," which would have allowed an illegal immigrant to stay in America indefinitely through continual renewals, are not an effective way of dealing with the problem. They serve the same purpose as acquiring a green card, without having to leave the country or waiting at the end of the line. In my opinion, this approach amounts to amnesty.

Conclusion

Although it does not appear likely that a comprehensive immigration bill will be taken up this year, I will continue to advocate for common sense reforms to our broken system. I believe that any immigration reform bill passed by Congress must first include strong border security provisions, an enforceable guest worker program, a secure employee verification system, and a system that does not reward illegal behavior, but provides equitable treatment for all immigrants. In the past, I have supported initiatives that would have accomplished these goals and I will continue to do so as my colleagues and I consider legislation in the 112th Congress.

Inkscape can do what Adobe Illustrator CS5 can do for free. It came with openSUSE . Instead of 650 MB, it is mere 40 MB.

Top 80 Genesis games (2012-08-15 06:18)

80 Krusty's Fun House

Another under-appreciated puzzle game, Krusty's fun house bears many similarities to lemmings but takes more of a hands-on approach, allowing you to roam about the levels in person.

79 79num FIFA International Soccer 95'

This was a milestone for Football games when released, I remember spending a lot of time playing it back in the day.

78 Star Flight

If you like your Adventure/RPG's games to be massive and non-linear then you can't go wrong with this game. You can go wherever you want and fully explore the universe in any order you want, the alien races are all very well designed and full of charm and the whole thing is very unique, it's actually the spiritual predecessor to one of my favourite games, Star Control 2 (same people worked on both games)

77 Decap Attack

Decap Attack may not be the most original game out there but when it's done this well who cares? loved the horror styling too.

76 Eternal Champions

Unlike other Street Fighter clones around at the time, Eternal Champion really had a feel and personality of it's own, and it has that easily identified classic Mega Drive look about it's graphics and style.

75 Super Fantasy Zone

I really love Fantasy Zone games, everything about them just seems to work, the look , the weapons, the gameplay which echews the usual scroll one way firing gameplay for a more non-linear style, this one even has a melodramatic story of revenge! which can only be a good thing.

74 Chiki Chiki Boys

Very Simplistic and charming Platformer where you run fly and swim through the stages swinging your sword, the presentation level is also very high, it's just a shame it's missing the 2-player mode as with this inclusion the game would've been able to reach a much higher placing.

73 Ristar

Ristar is a bit like a cross between Bionic Commando and Sonic the Hedgehog, it doesn't always work as well as the developers probably hoped but there's some nice original ideas and the graphics are extremely impressive too.

72 Jungle Strike

Built upon the groundwork of the original admirably, this is the shoot-em-up for fans with a leaning towards strategy.

71 Thunder Force III

Great music, fast frenetic blasting, a brilliant power-up system and nice design, all hallmarks of a great Shmup and a classic series.

70 Sonic 2

It may have been more of a Sonic 1.5 than a proper sequel, but Sonic 2 had enough of the Sonic magic, as well as some very important additions with the spin dash and inclusion of Tails to warrant praise, and though the 2 player co-op was a bit of a design mess for player two the competitive mode was also a great addition.

69 Hellfire

Great shmup that all the mags seemed to rave about it the early days, it has to be admitted that there's some real finesse at the way that the power-up system works in this game, and how it effects the clever level and boss designs.

68 Wiz N' Liz

Really fast, really fun, really unique, run around catching rabbits and creating spell before the time runs out, great in 2 player too.

67 Alisia Dragoon

This is an excellent little unique platformer, not only do you get a pretty original lightning style attack but you also have a companion of your choice and upgradeable stats, it really rewards you for exploring all the stages properly too

66 Pete Sampras Tennis

Really fun tennis game made even greater by the fact that it was on a J-Cart (and everyone knows J-Cart's rule) on top of that was the fantastically mad-cap "wacky mode" unlocked by typing "zeppelin" into the password section on world tour mode.

65 Dynamite Heady

Treasure really knew the in's and out's of the MD, their games always seem to look better than 95 % of the competition, Dynamite Heady is no different, great, varied gameplay and impressive set-pieces are also the order of the day.

64 Mega Bomberman

Bomberman, everyone out there has probably played a form of this game in one way or another already, this version is pretty well presented with nice graphics and such, and most importantly the multi-player is as great as ever.

63 Phantasy Star III

A bit of a departure for the series, PS3 was still very impressive by any RPG's standards and it had some of it's own unique features which is always an admirable quality.

62 Sub Terrania

Very original and unique take on the gravity style of shmups (you know, like asteroids or thrust) but this time with much more focus and variety due to it's mission based structure, the game is also quite difficult so those who give up easily need not apply.

61 Toejam and Earl

Toejam and Earl is a weird game, that is pretty lacking focus and let's you do what you want at your own pace, it probably shouldn't work but somehow does really well, I think it's something to do with it's high level of charm and likeability.

Marvel Land/Talmit's Adventure

It may not be the most original platformer of all time but what it lacks in originality it more than makes up for in charm and well designed playability.

60 Lemmings

A classic puzzle game, everybody probably already knows about Lemmings anyway, so I don't really need to write anything do I?

59 Samurai Showdown

Take Street Fighter and add weapons and animal helpers and you pretty much get Samurai Showdown, probably my favourite SNK fighting game.

58 Micro Machines 96'

By the release of this iteration of Micro Machine's Codemasters had really had the time to craft their game-play to perfection, the levels were more colourful and varied and the multiplayer was even more excellent than ever, an essential purchase.

57 Zero the Kamikaze Squirell

After the abomination that was the Bubsy series Sunsoft really did a turn around and released this, great gameplay and level designs, loads of originality and a main character who was actually pretty decent.

56 Mega Lo Mania

Mega Lo Mania is easily one of the best and most fun real time strategies for the Mega Drive, it plays a bit like Populous. I like the way that the game progresses through time as you reach new levels.

55 Shining Force

Sequel to the great Shining in the Darkness, SF was more of a strategy game than the previous dungeon crawler, and this worked much better, and ended up being the route that the series would end up taking for future releases.

54 Gaeares

Gaeares is yet another great shmup on the Mega Drive (there were so many) and it has a fantastic concept all of it's own where you clamp onto your enemies to steal there abilities and power yourself up.

53 Castle of Illusion

I absolutely could'nt believe my eyes when I first saw this game, it took graphics and presentation to the next level, and underneath it all was some perfectly honed gameplay, if it had been a little bit harder it probably would've reached higher on the list but it's just over too fast.

52 Strider

Strider is a classic, plain and simple, there's just something about it's atmosphere and music that makes it timeless, the control system was a little rigid but anyone who took the time to really learn the game found deep and fulfilling gameplay.

51 Twinkle Tale

Great little top down shooter that has you playing as a witch. A well judged learning curve and great boss designs are some of it's strengths.

49 Splatterhouse 3

Splatterhouse 3 is one of those games that couldn't of been done justice on any other console at the time, it needed the horror and blood to add to the chilling atmosphere. The gameplay had been much refined over it's predecessors, and the multiple story paths really added depth.

48 Addams Family

Ocean were a pretty awful company by the 16-bit era all things considered, but one series of games always proved that there was still some talent there, and that was the Addams Family games, this one was like a cross between Mario and Metroid, which worked really well.

47 Elemental Master

An interesting vertical scrolling shooter which has you playing on foot (instead of the usual spaceship) this means that environmental hazards play a larger part than most games of the genre, the gameplay is a class act throughout and theres some above average presentation with nice cutscenes too.

46 Populous

A ground greaking sim which sees you playing the part of a god, and who doesn't want to fell like they have that sort of power?

45 James Pond II

I think that James Pond II may of been the pinnacle of the European style exploration based platformers of the time, it just seemed to click, this coupled with the styling which was also first rate and endearing helped create an enduring classic that's still popular today.

44 Worms

One of the truely timeless multiplayer video games ever made, don't let the tiny graphics fool you either, somehow they manage to fit a horde of charm and personality into every worm. Gameplay is simple, but elegantly executed.

43 Comix Zone

Beat-em-up with the very interesting idea of having the action taking place over frames comic book style, as a beat-em-up the game is very polished, but not only that the items, puzzles and nice running narrative help to add a level of depth.

42 Toejam and Earl Panic on Funkotron

The developers went for a much more linear platforming style to the second game in the series, and I feel that it helps to make the game a bit more accessible, everything that made the 1st game great is still there too.

41 Revenge of Shinobi

Haters seem to only associate the MD with Sonic, they'll moan about "lack of depth" and so forth, conveniently forgetting that Sega have more than one classic series at their disposal anyway, and you could hardly criticise the Shinobi series as lacking in depth, with it's precision based gameplay versatile moves and selectable specials. In my opinion Shinobi is just as important as the more famous hedgehog in defining the Mega Drive.

40 Castlevania Bloodlines

Great Atmosphere, faster gameplay, gore and brilliant set-pieces make this one of my absolute favourite Castlevania games, the differences between the two characters was also pronounced enough to give varying play experiences too.

39 Phantasy Star II

Another great iteration in the classic RPG series, who says the Mega Drive doesn't have any RPG's?

38 Shadow Dancer

After making The Revenge of Shinobi Sega went back to their roots with Shadow Dancer, making it much more of a sequel to the original game than any of the others, and as such SD is a much different experience to any of the other MD games. It's much more action based, and has a more arcadey feel to it, having a dog to help you was also a very nice touch too.

37 Mean Bean Machine

Puyo Puyo was one of the really stand out Tetris style games that came out. when brought to the Mega Drive they decided to make it into a part of the Sonic series and add it's characters and such.

36 Vector Man

Great run and gun game with a totally unique look of it's own, the game simply plays excellently and the variety of different types of levels really help to keep the game interesting.

35 Ghouls N' Ghosts

Sega did a wonderful job converting Capcom's classic to the MD, and as such the game became one of the MD's early release classics, I always liked how all the levels have a different thing going on, with varied gameplay styles.

34 The Lost Vikings

Perfect Puzzle/Platformer hybrid, you get 3 dwarves each with varying abilities and weaknesses and the ability to swap them on the fly, the levels are built around working out which of the 3 best suits each obstacle ahead and using him accordingly.

33 Eliminate Down

Big fantastic set-pieces, highly polished gameplay, impressive bosses and a great power-up system (which is kinda' like Thunder Force but upgradeable) a classic shmup in every sense

32 Sonic the Hedgehog

This was the big one, the game which cemented the MD as a force to be reckoned with, without Sonic who knows what would've happened, people seem to forget just how unique, imaginative and generally perculier an experience this was when it originally came out.

31 Shadow Run

Blue Sky did a good job of converting the pen and paper original to the MD, creating a system that worked well within the constraints of the console as well as conveying the original feel and style which made it a classic, if you like your RPG's to be complicated and in depth this is heartily recommended.

30 Alien Soldier

Treasure do it again, another classic run and gun game, this time squarely aimed at the hardcore fans, they give you all the options, controls and weapons you could dream of then throw you into the deep end.

29 Kid Chameleon

Kid Chameleon may have been blatantly inspired by the Mario series but manages to have a style and personality of it's own, gone are the happy plains of the mushroom kingdom to be replaced by a bleak dog eat dog world, the makers seemed to take a different direction to Miyamoto too, focusing more on expanding Mario 3's different suits (which were pretty much forgotten about for Mario World)

28 Rocket Knight Adventures

Great, playable and well presented platformer, the main difference here is that you get a rocket pack added to your inventory which helps to give RKA a feel of it's own, The shmup stages were classic Konami too.

27 Ranger X

Ranger X is a very original shooter, you get to play as a car or split into two sections both of which you still get control over (so long as you have a 6 button controller) the graphics are phenominal and you wonder how the colour variety could be possible for the old MD.

26 MUSHA

MUSHA is a graphically impressive, intense shooter that's part of the series of games made by compile (aleste, zanic, gun nac) another notable thing about it is the fact that it has multiple endings.

25 Earthworm Jim

Earthworm Jim was an amazing amalgamation of refined run and gun gameplay, comedy and general brilliant presentation, originally a MD game it became so successful that it got ported to every other machine and even got it's own cartoon series.

24 Virtua Racing

One of the first truly 3D racing games out there Virtua Racing really wowed everyone the first time they saw it, the game does miss out on some of the greatness of the arcade original but enough is left intact for it to be a great game in it's own right.

23 Mortal Kombat 2

This was probably my favourite game in the series, MK had managed to find it's feet by this time and build upon the original, and it is in my opinion the fairest and most balanced game of the series.

22 Road Rash 2

I think this is my favourite racing game on the Mega Drive, it's fast and furious and the ability to hit other riders off their bikes really gives a bit of an adrenaline rush.

21 Pirates Gold

An updated version of an ultimate classic game, Pirates is just timeless in every way, it's basically an action adventure style game where you sail about becoming more renowned as you progress.

20 Wonderboy in Monster World

I really like the later Wonder boy games, they have an excellent marriage of platformer and RPG elements, in

this one you had to find an ocarina and learn to play different tunes for it to open doors (sound familiar?)

19 Yu Yu Hakusho

Unlike most other Fighters of the time Yu Yu Hakusho didn't try to clone Street Fighter, and went instead for a multi-layered playing field (like Bleach DS). the 4-player mode was also like nothing else out at the time and was great fun.

18 Contra Hard Corps

Is there any 16-bit games out there that can compare to CHC in action and excitement? the game is fast and brutal, and throws set pieces at you like no other game, if it wasn't so difficult it would've definately placed a little higher in the list.

17 Crusader of Centy/Soleil

Centy is very much the MD's answer to Zelda - A Link to the Past, it may not be quite as good, but it is still a very impressive, charming RPG. It does also have a lot of ideas of it's own going on too, with it's animal collecting and such.

16 Ecco - Tides of Time

The Ecco series was not for everyone, you either hated them or adored them, though few could argue that Tides of Time wasn't a beautifully designed and unique game with a brilliant storyline.

15 Gley Lancer

The best thing about Gley Lancer I feel is the wealth of options it makes available, you really get to customise your ship to suit your gameplaying style, and it's just one of those games where everything seems to click into place perfectly.

14 Streets of Rage 2

Streets of Rage 2 in my opinion was an ultra refined beat-em-up, it never strayed far from the classic formula but it was just an amazingly well presented and feeling game with a timeless quality about it.

13 Mega Turrican

Turrican games don't seem to ever get the respect they deserve, every iteration of the series was a stellar effort and this one was no different, great playability, set-pieces and an excellent new Bionic Commando style grappling

hook.

12 Story of Thor/Beyond Oasis

This has to be one of my favourite RPG's on the system, it's a lot of fun and just has an amazing, unique style permeating it.

11 Dune 2

This game was probably one of the most important (if not the most important) RTS games ever made, it was the originator of the whole Command and Conquer style of games, once you get to grips with the controls you'll find a game just as playable today as it was then.

10 Pulseman

Take Sonic and then add loads of new interesting and clever ideas and gameplay and you have Pulseman, though probably a deeper experience overall than Sonic, Pulseman isn't perfect, it has some of the most awful background designs I've ever seen!

9 Herzog Zwei

Narrowly beat out Dune 2 as the best Strategy game on the system, mainly due to it's uniqueness, and more importantly it's excellent multiplayer, for those who like their strategy games to be fast and furious.

8 Shining Force 2

A big improvement over the first (which was no mean feat) great music, a refined engine with pretty well balanced strategy. another great game.

7 Thunder Force IV/Lightening Force

Amazing action, amazing graphics, one impressively fantastic set-piece after another, brilliant music, quite possibly the best 16-bit Shmup out there.

6 Street Fighter 2

Street Fighter 2 has to be one of the most important and influential games ever made, and there's just something very right about using the MD 6 button pad to play it with.

5 Shinobi 3

Sega managed to strike the perfect balance of depth and all out action with this iteration of their classic series, great new abilities, some of the best graphics for the system and impressive set-pieces are the order of the day here.

4 Landstalker

It's nice to have a change once in a while so I'm glad Landstalker's developers went for an Isometric view, it works really well in the genre and the whole world of the game feels a lot more solid.

3 Gunstar Heroes

The first time I saw Gunstar Heroes I couldn't believe my eyes, never before had I imagined that the MD could pull this level of stuff going on with such impressive graphics and a simultaneous 2-player! It's definately a must have MD game.

2 Phantasy Star IV

The best RPG on the system, great storyline, great presentation, loads of depth, a welcome return to the series' roots.

1 Sonic 3

Bigger and better than all those that came before it Sonic 3 heralded larger, more interesting levels that seamlessly joined on to each other, an improved co-op where Tails could actually do something, a proper running narative, ability to save, loads of set-pieces, completely re-designed graphics and more depth than ever with it's different paths, it's as though Sonic Team had really looked at their previous games and spent a long time improving on every aspect they felt lacking, quite simply one of the greatest games ever made, make sure you play it as intended with Sonic and Knuckles attached too.

Energy (2012-08-15 08:50)

The economic well-being of the United States and the livelihood and safety of our citizens is largely dependent on maintaining a strong energy supply. We depend on electricity to light our homes and businesses, natural gas to heat them, and gasoline to operate the cars and trucks that carry us to work and transport our goods. Because of the vital role of energy in our daily lives, we must continue to develop new sources of energy that are reliable, renewable, affordable and environmentally safe.

The Path to Prosperity

The Path to Prosperity, the budget resolution that I authored, calls for getting Washington out of the business of picking winners and losers in the economy – and that includes our energy sector. Look no further than the bankruptcy of

Solyndra, a company that was once the poster child for the Administration's "green jobs" initiative, to see an example of the failure of Administration's economic policies. Having Washington pick winners and losers in the marketplace only further distorts the market, weakens the rule of law, and ultimately, fails to spur sustainable job creation.

Rather than helping politically connected firms at the expense of others, Congress should be advancing comprehensive policies that benefit all job creators and entrepreneurs. The best energy policy is one that encourages robust competition and innovation to ensure that the American people have access to an affordable and stable energy supply. This is exactly what the House-passed budget does. The Path to Prosperity eliminates crony capitalism through the tax code, advances pro-growth reforms aimed to boost job creation and lower gas prices.

It calls for fundamental, revenue-neutral tax reform that would scale back or eliminate the deductions, loopholes and carve-outs that are distorting the tax code. It seeks to end the current tax discrimination and treat large and small businesses alike. It lowers the corporate rate to 25 percent for all job creators so that U.S. businesses no longer have to labor under the highest corporate tax rate in the world. By broadening the tax base, the federal government would be able to generate the same level of revenue without the discriminatory distortions for special interests that politicians have packed into the current tax code over the years.

It rejects calls from the President and his party's leaders in Congress to raise taxes on energy producers. According to the non-partisan Congressional Research Service, the President's tax policies would "raise the cost of exploration and production, with the possible result of higher consumer prices and more slowly increasing domestic production." Independent energy producers and families would bear the brunt of these punitive tax hikes.

The Obama administration has blocked and delayed domestic energy production both onshore and offshore, costing jobs and sidelining American energy sources at a time of rising gasoline prices and unstable conflict in the Middle East and North Africa.

The House-passed budget calls for a more sensible approach, allowing for more resources from bonus bids, rents, royalties, and fees as a result of unlocking domestic energy supplies in a safe, environmentally responsible manner.

A Long Term Solution for Energy Independence

I believe a national energy proposal must take a multi-pronged approach focused on increasing American-made energy, reforming outdated fuel regulations, and investing in alternative energy sources. I was happy to help author H.R. 909, A Roadmap for America's Energy Future. This legislation, introduced by Representative Devin Nunes, promotes an all-of-the-above energy policy that embodies the pillars explained above: it facilitates American-made energy, recognizes the importance of alternative energy, streamlines the outdated regulatory process for clean technologies like nuclear power, and avoids hitting our economy with new taxes and mandates.

More Refineries

I also support reforms to our regulatory regime to allow for new refineries to be built in the U.S. We have not built any new refineries since 1976. At that time, our country was only using a handful of blends of gasoline. Now, we are attempting to refine four dozen blends of gasoline in a system designed to only produce a few. This has imposed substantial constraints on our ability to refine the gasoline that we use on a daily basis and has forced us to import more and more of the gasoline that we use. Furthermore, adding new refineries to the market will lead to greater competition and help place downward pressure on prices.

Boutique Fuels

In addition to problems with supply, we pay more for gasoline because of an outdated reformulated gasoline policy that requires different areas of the country to use different blends of fuel to meet environmental requirements. This fragmented system results in the under-production of certain blends and allows refineries to charge more for the unique boutique fuels that they produce due to a lack of competition in the marketplace. The use of boutique fuels also causes price spikes any time that there is a supply disruption, such as a refinery fire or pipeline break, because there are few refineries that can make the special blend to cover the loss in capacity. Furthermore, areas like South-eastern Wisconsin that are required to use different fuels during the winter and summer months experience price spikes when the transition between fuel types is made.

Conservation

We must also affect the demand side of increasing gasoline prices. I believe that energy conservation and responsible fuel efficiency improvements can go hand in hand with our efforts to expand our economy. I believe that initiatives such as requiring efficiency improvements on vehicles using a class-by-class basis, rather a company-by-company ba-

sis, are proposals that can help reduce the demand for gasoline while not undermining U.S. auto manufacturers. It is my hope that Congress will pass legislation that will reduce energy consumption in an efficient manner, protecting our domestic auto industry and ensuring lower energy prices for consumers.

Domestic Production

America has an abundance of domestic resources – including natural gas and oil in the Outer Continental Shelf, Alaska, oil shale in the Central West, and a variety of alternative sources. A top priority of the 112th Congress must be to unleash the potential of domestic production of American-made energy in an environmentally-conscious manner. We can do this while simultaneously improving infrastructure and creating jobs by allowing the use of royalties paid by energy companies to repair roads and bridges. At a fundamental level, the cause of expensive gasoline is an imbalance between supply and demand. Our society continues to demand more gasoline, but we have not increased the domestic supply of crude oil or finished gasoline. Increasing supply at home will not only help lower fuel prices and create good paying jobs, but it will reduce our reliance on foreign oil from hostile nations such as Iran and Venezuela. To this point, House Republicans are committed to advancing proposals to increase American-made energy. A variety of bills have passed the House and are awaiting further action in the Senate including:

H.R. 2021 – the Jobs and Energy Permitting Act

H.R. 1938 – the North American- Made Energy Security Act

H.R. 910 – the Energy Tax Prevention Act

Keystone XL Pipeline Decision

Last July, the House passed H.R. 1938, the North American-Made Energy Security Act, which directed the President to issue a final order granting or denying the permit for the Keystone XL pipeline. The pipeline would connect the tar oil sands in Alberta, Canada to the US Gulf Coast. Estimates indicate that this could enhance early energy capacity to oil refineries in the Midwest and Gulf Coast by 700,000 barrels per day. Despite passing the House with bipartisan support and estimates that the project will create tens of thousands high-quality, good-paying construction jobs in addition to several thousand more “spin off” jobs, the Democrat-controlled Senate never took up the bill, and on November 10, 2011, the Obama Administration announced that no decision would be made on the long-sought pipeline until 2013, conveniently after the next Presidential election.

As part of the Temporary Payroll Tax Cut Continuation Act, which was agreed to in December 2011, President Obama is required to issue a permit for the Keystone XL pipeline within 60 days – by February 2012 - unless he determines that the pipeline would not serve the national interest. Should President Obama decide that this is the case, he is required to submit to Congress a report detailing his justification for this decision.

On January 18, 2012, President Obama rejected the Keystone XL pipeline saying: “This announcement is not a judgment on the merits of the pipeline, but the arbitrary nature of a deadline that prevented the State Department from gathering the information necessary to approve the project and protect the American people.” There was nothing arbitrary in the deadline given to the President. This project has been in the works for several years, and I am disappointed that the President decided this job creating proposal was not in the nation’s best interest. I look forward to working with Members of Congress to find ways to move forward on this proposal which will not only lessen our dependence on Middle Eastern oil but also create thousands of American jobs.

Terrorism (2012-08-16 08:51)

As your Representative, keeping America safe remains my first priority. As Chairman of the House Budget Committee, I am committed to ensuring that the federal government provides our military with the necessary resources to accomplish the missions that they have set to protect our nation from those who wish to do us harm.

Fiscal Year 2013 Defense Appropriations

H.R.4310, the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2013, which passed the House with my support on May 18, 2012 by a vote of 299-120, authorized funding for national defense at \$554 billion for the base budget and \$88.5 billion in overseas contingency operations including Afghanistan. The bill provides our war fighters and their families with the care and support they need, deserve, and have earned; while ensuring that proposed draw-

down plans do not cut to the heart of the Army and Marine Corps. It also provides our military with the resources, and authorities it needs to win the war in Afghanistan and continue to prosecute the wider War on Terror. The NDAA is currently awaiting action in the Senate.

Path to Prosperity

The Path to Prosperity budget passed the House on March 29, 2012. The resolution reaffirms a commitment to the men and women in uniform and ensures that national security remains the government's top priority. The budget rejects proposals to make across-the-board cuts in funding for national defense, and provides \$554 billion for national defense spending in FY2013, an amount consistent with America's military goals and strategies.

The defense budget is currently slated to be cut by \$55 billion, or 10 percent, in January of 2013 through the sequester mechanism enacted as part of the Budget control Act of 2011. This reduction would be in addition to the \$487 billion in cuts over ten years proposed in President Obama's budget. The Path to Prosperity acknowledges that defense spending needs to be executed with effectiveness and accountability; however, government should take care to ensure that spending is prioritized according to the nation's needs, rather than treated indiscriminately with regard to cuts. Further, the House-passed budget recognizes the sacrifices that veterans and their families have made to ensure the continued security of our nation, and provides funding to afford the best care possible that veterans have bravely earned.

Iraq

On October 21, 2011, President Obama announced the withdrawal of all U.S. troops and trainers from Iraq to be completed in 2011. Since January 1, 2012, the United States has maintained normalized relations with Iraq, and will continue to assist in the training of Iraqi forces, encouraging regional security, peace and respect for Iraqi sovereignty. I am encouraged by the progress that has been made in Iraq, and we must remain vigilant to ensure that the hard-won gains in Iraq do not slip away now that America's combat participation has ended.

Afghanistan

Following the terrorist attacks on September 11, 2001, the United States made a commitment to defeat those responsible for the horrific attack. As part of the broader war on terror, the U.S. military has effectively engaged our enemies in Afghanistan and employed counter-insurgency tactics to combat current threats to our national security. This military strategy necessitates enough troops on the ground to clear and secure areas, move onto subsequent locations while maintaining a level of operable safety. Commanders requested 33,000 soldiers, totaling deployment to 100,000, and the President initially complied with this request. However, on June 22, 2011, the President announced a withdrawal of the same number of troops timed to conclude just before the 2012 elections.

The withdrawal has the potential to pose security threats to soldiers continuing shorthanded counter-insurgency operations, as well as to compromise the larger mission in Afghanistan. Further, the Afghan citizens currently working with our troops to quell violence may view the withdrawal as a signal that our forces are no longer committed to the mission, which will serve to debilitate the long-term diplomatic, development and reconstruction efforts in the area. I believe that the engagement in Afghanistan is necessary, and demands careful considerations for the safety of both our Armed Forces and citizens. Our own security at home depends on denying Al Qaeda and other terrorists a safe haven to operate from abroad such as Afghanistan. I continue to support providing our soldiers with the best possible equipment so they are able to complete their mission safely, effectively and on time so they can return to their families as soon as possible.

Israel

America has no better friend in the Middle East than the nation of Israel. Not only is Israel the region's only fully functioning democracy, with a government based on popular consent and the rule of law, but it is also a valuable ally against Islamic extremism and terrorism. Our shared democratic values and national interests are supported by maintaining a close friendship with Israel. Americans also have a strong interest in Israel achieving a lasting peace with its neighbors – including the Palestinians.

Reasonable people – including those who live in the Middle East – differ about how the conflict between Israel and Palestine can be resolved. However, I believe at least one thing is clear: we cannot advocate for a solution to the Israeli-Palestinian conflict that jeopardizes Israel's safety or legitimizes terrorism. Hamas, which is one of the two major Palestinian political factions, is an Islamist terrorist group whose charter calls for Israel's destruction, refuses to recognize Israel's existence, and calls Osama Bin Laden a "martyr."

While I do not have a role in the diplomatic discussions over the resolution of the Israeli-Palestinian conflict, America should not pressure Israel to agree to a peace deal that is unlikely to result in peace and security. Real peace will require Palestinians to recognize that Israel has a right to exist, even as it will require two states for the two peoples. Introduced by House Majority Leader Eric Cantor on May 13, 2011, H. Res. 268 reaffirms the United States' commitment to a negotiated settlement of the Israeli-Palestinian conflict through direct negotiations. I co-sponsored this legislation, and it passed the House on July 7, 2011 by a vote of 407-13. I was also a cosponsor of H.R. 4133, the United States-Israel Enhanced Security Cooperation Act, also introduced by Majority Leader Eric Cantor, which passed the House on May 9, 2012 by a vote of 411-2. H.R. 4133 states that it is United States policy to reaffirm the commitment to Israel's security as a state, provide Israel with the military capabilities to defend itself, expand military and civilian cooperation, assist in a negotiated settlement of the Israeli-Palestinian conflict, and encourage Israel's neighbors to recognize its right to exist.

Supporting Our Troops

We must not forget that we are a nation at war. The brave troops who serve our country worldwide have made and continue to make tremendous sacrifices on behalf of this nation. I am grateful for their service, and am dedicated to ensuring that they are provided with the necessary resources to achieve their missions safely and effectively and to return to their families as quickly as possible. Congress must also work to ensure that the families of these courageous individuals are thanked and cared for while their loved ones are away. As Congress continues to consider further legislation with regard to these issues, please rest assured that I will not lose sight of the effects that our national policy has on the lives of our troops and their families and the security of our nation.

Medicare (2012-08-17 08:47)

Medicare is the cornerstone on which all other government health programs rest. Unfortunately, the deteriorating financial conditions of this program are threatening beneficiary access to its benefits. In their most recent report, the Medicare Trustees projected that the account that funds Medicare's hospital benefit will go bankrupt in 2024. Reports like this illustrate that we can no longer let politicians in Washington deny the danger to Medicare – it is all too real, and the health of our nation's seniors is far too important. We have to save Medicare to avoid disruptions in benefits for current seniors and to strengthen the program for future generations.

The President's Health Care Law

On March 25, 2010, a Democrat controlled Congress passed the President's new health care law which fundamentally realigns our nation's health care system. This massive health care overhaul will exacerbate the very problems this reform effort sought to address. It will dramatically alter our deteriorating economic and fiscal conditions for the worse and may irrevocably impair the American identity.

Sky-rocketing health care costs are drowning families, businesses and governments in red ink—leaving millions priced out of the market and without coverage. This law—with its maze of mandates, dictates, controls, tax hikes and subsidies—pushes costs further in the wrong direction. It initiates a government takeover of the health care sector (17 % of the U.S. economy), intrudes in the doctor-patient relationship, and increases total spending by almost \$2.6 trillion. The law relies on 10 years of tax increases and 10 years of Medicare cuts to pay for six years of new spending. Moreover, it raids over \$700 billion from Medicare to finance a new open ended entitlement. All told, this law will dramatically add to an already unsustainable rate of government spending growth that will overwhelm the Federal budget and will dramatically change the way Americans get health care.

The health care law will have significant and serious consequences on the sustainability of Medicare and access to medical care. Before the bill's enactment, the Medicare program was already on an unsustainable path. According to the most recent Medicare Trustee's report, the Medicare program will be insolvent by 2024 —meaning Medicare will have exhausted the assets in its Hospital Insurance trust fund. Instead of reforming this important program so that current beneficiaries will not see a disruption in their services and future generations will be able to plan their retirement around Medicare's assistance—as I have been advocating for several years—the health care law treats Medicare like a piggy bank.

Instead of promoting real competition – which would moderate costs naturally—the law nationalizes the regulation of health insurance premiums. This will lead to shortages and rationing. Waiting times will replace prices as a means of balancing limited supply and higher demand. Quality will decline as consumers begin facing restricted access to the full range of treatment options. Greater government regulation also will limit incentives for medical innovation. Yet, despite all the new spending and all the increased taxes, supporters of this law argue that it will actually reduce our current deficit levels. However, the fiscal arguments just do not add up. The only way reduce the deficit, while at the same time having the government pick up the tab for more than 30 million uninsured Americans and subsidize millions more is through the use of smoke and mirrors.

Medicare Reimbursements for Physicians

Medicare reimburses health care providers for various procedures they perform. These reimbursements are made according to a fee schedule, which is updated annually by a formula called the Sustainable Growth Rate (SGR). If spending exceeds the established targets, payment rates to providers are cut; if spending is below the target, payment rates are increased. The intent of the formula is to place a restraint on overall increases in Medicare spending for physicians' services.

Since 2003, Congress has chosen to override current law in order to prevent reimbursements from being cut as a result of the formula. On December 23, 2011, the House and Senate approved legislation that would provide, among several provisions, a two month delay in the scheduled cuts in physicians' Medicare reimbursements that would have taken place on January 1st due to the flawed SGR formula. On February 16, 2012, Congress extended the delay through December 31, 2012. However, since the law only provides a temporary patch to the more than 30 % cut, Congress must address the issue again before the end of the year.

Rather than passing temporary fixes, I would prefer to address the more important matter of wholesale reform to the Medicare reimbursement system. Physicians should not have to wait on Congress to act every year in order to prevent pay cuts that are arbitrarily determined by an outdated formula. Fundamental reforms to Medicare and our broken health care system are urgently needed, and I will continue to push my colleagues to take on this challenge.

Path to Prosperity

Medicare's structural imbalance threatens beneficiaries' access to quality, affordable care. Currently, Medicare reimburses health care providers for services, creating a perverse incentive to order more tests and perform more services than may be necessary as a way to maximize one's share of the program. By basing payment on volume, not quality, costs rise and efficiency is reduced. Ultimately, this flaw in the structure of the program is driving up health care costs, which are, in turn, threatening to bankrupt the system – and ultimately the nation.

Unless Congress fixes what's broken in Medicare, without breaking what's working, the program will end up causing exactly what it was created to avoid – millions of American seniors without adequate health security and a younger working generation saddled with enormous debts to pay for spending levels that cannot be sustained.

It is morally unconscionable for elected leaders to cling to an unsustainable status quo with respect to America's health and retirement security programs. Current seniors and future generations deserve better than empty promises and a diminished country. Current retirees deserve the benefits around which they organized their lives. Future generations deserve health and retirement security they can count on. By making gradual structural improvements, Congress can preserve America's social contract with retired workers.

Recognizing the problems facing Medicare, the House-passed Budget:

Strengthens health and retirement security by taking power away from government bureaucrats and empowering patients with control over their care.

Repeals the new health care law's unaccountable board of bureaucrats empowered to cut Medicare in ways that would jeopardize seniors' access to care.

Saves Medicare for current and future generations, with no disruptions for those in and near retirement.

For younger workers, when they become eligible, Medicare will provide a premium-support payment and a list of guaranteed coverage options – including a traditional fee-for-service option – from which recipients can choose a plan that best suits their needs.

Program growth would be determined by a competitive-bidding process – with choice and competition forcing providers to reduce costs and improve quality for seniors.

Premium support, competitive bidding, and more assistance for those with lower incomes or greater health care

needs will ensure guaranteed affordability for all seniors.

Letting government break its promises to current seniors and to future generations is unacceptable. The reforms outlined in the budget passed by the House protect and preserve Medicare for those in and near retirement, while saving and strengthening this critical program so that future generations can count on it to be there when they retire. Beginning in 2023, when workers currently under the age of 55 become eligible for Medicare, seniors would be given a choice of private plans competing alongside traditional fee-for-service option on a newly created Medicare Exchange. Medicare would provide a premium-support payment either to pay for or offset the premium of the plan chosen by the senior.

The Medicare Exchange would provide all seniors with a competitive marketplace where they could choose a plan the same way members of Congress do. All plans, including the traditional fee-for-service option, would participate in an annual competitive bidding process to determine the dollar amount of the federal contribution seniors would use to purchase the coverage that best serves their medical needs. Health care plans would compete for the right to serve Medicare beneficiaries.

The second-least expensive approved plan or fee-for-service Medicare, whichever is least expensive, would establish the benchmark that determines the premium-support amount for the plan chosen by the senior. If a senior chose a costlier plan than the benchmark plan, he or she would be responsible for paying the difference between the premium subsidy and the monthly premium. Conversely, if that senior chose a plan that cost less than the benchmark, he or she would be given a rebate for the difference. Private health plans would be required to cover at least the actuarial equivalent of the benefit package provided by fee-for-service Medicare.

Program growth would be determined by the competitive bidding process – with choice and competition forcing providers to reduce costs and improve quality for seniors. The competitive market for Medicare choices would foster innovation and quality while ensuring that the program is financially stable. As opposed to pegging the growth rate to a predetermined formula, competitive bidding offers the ideal means of harnessing the power of choice and competition to control costs, while also securing guaranteed affordability for patients. As a backup, the per capita cost of this reformed program for seniors reaching eligibility after 2023 could not exceed nominal GDP growth plus 0.5 percent. The President has repeatedly proposed empowering IPAB to hold Medicare growth to the same rate; the difference is that this budget proposes to use competition to control costs.

All health plans that participate in the Medicare Exchange, including the traditional Medicare option, would be required to offer insurance to all seniors – regardless of age and health status – thereby preventing insurers from cherry picking only the healthiest seniors for coverage under their plan. Additionally, the federal contribution to seniors' health plans would be increased to account for a senior's health status and age.

These reforms also ensure affordability by fixing the currently broken subsidy system and letting market competition work as a real check on widespread waste and skyrocketing health-care costs. Putting patients in charge of how their health care dollars are spent will force providers to compete against each other on price and quality. That's how markets work: The customer is the ultimate guarantor of value.

Reform aimed to empower individuals — with a strengthened safety net for the poor and the sick — will not only ensure the fiscal sustainability of this program, the federal budget, and the U.S. economy. It will also guarantee that Medicare can fulfill the promise of health security for America's seniors.

Taxes (2012-08-19 08:53)

At a time when Wisconsinites are facing economic uncertainty, a high unemployment rate and a rise in the costs of living, the last thing our country needs are tax increases. The President's budget imposes a heavy cost for its commitment to intrusive government – diminishing economic opportunity by imposing the largest tax hike in American history. This budget imposes \$1.9 trillion in new taxes on families and small businesses, while adding new complexities to an already broken tax code. At the same time, the President's budget would increase the debt held by the public by \$9 trillion over ten years and would never set the budget on a path to balance. Instead of chasing higher spending with ever-higher taxes, Congress needs to make our tax code fair, competitive and simple. Unfortunately,

our current tax system fails on these three elements.

Looming Tax Increases

In Wisconsin, approximately 90 percent of businesses file their federal income taxes as individuals, not as corporations. These businesses that file their federal income taxes as individuals employ more than 50 percent of the Wisconsin workforce. Imposing tax hikes on employers and making the tax code even more complicated will only hurt job creation and our economic recovery. Unfortunately, this is exactly what has happened under new laws enacted by President Obama.

Most of the tax increases enacted since January 2009 are included in the new health care law, the Patient Protection and Affordable Care Act (H.R. 3590). This law will enlarge government, increase Federal spending, deficits and debt. It initiates a government takeover of the health care sector (one-sixth of the U.S. economy); increases total spending by \$2.6 trillion; raises taxes by more than a half-trillion dollars over the next 10 years (the largest tax increase in history) and cuts more than a half-trillion dollars from Medicare to finance a new entitlement. For these reasons, I voted against this legislation. The largest single tax hike in the health care law (\$210 billion) results from the 0.9 percent increase in the Medicare payroll tax on wages for employers and small businesses, and a new 3.8 percent Medicare surtax on net investment income. The threshold amounts for these surtaxes are not indexed for inflation so these taxes that are aimed at “wealthy” individuals today, will reach increasing numbers of middle-income taxpayers over time, just as the Alternative Minimum Tax has.

The new health care law also provides \$10 billion to expand the IRS, which will be in charge of verifying that every American taxpayer has obtained health insurance defined under this new law. Taxpayers who fail to prove that they have the health insurance required under the health care law, face a new tax up to up to \$2,250 or 2 percent of the taxpayer’s income (whichever is greater). The new law, however, includes an exemption for illegal aliens and incarcerated individuals. Incarcerated individuals are exempt because they receive taxpayer-funded health care in prison. Though illegal aliens cannot receive a tax credit or Medicaid coverage under the health care law, they may receive emergency room care, but do so without paying the same penalty that uninsured Americans must pay. According to the Congressional Budget Office and Joint Committee on Taxation, nearly half of the taxes collected from this law, would be paid by households earning less than 300 % of the Federal Poverty Line (\$66,150 for a family of four).

The President’s budget proposal for Fiscal Year (FY) 2013

At a time when strong leadership is needed in the White House, President Obama’s proposed budget, in the words of The Washington Post, “falls short.” Failing to heed the warnings of economists and the concerns of our fellow Americans, the President’s budget accelerates our country down the path to bankruptcy. In the three years since President Obama was sworn into office, the national debt has increased 45 percent, from \$10.6 trillion to more than \$15 trillion. The President’s FY2013 budget contains massive tax increases, does nothing to pay down our crippling national debt, and continues the trend of out of control government spending. By his own projections, this budget would propel the national debt to \$26 trillion by 2022. Along with adding \$11 trillion to the national debt, his budget would impose a \$1.9 trillion tax hike, creating more uncertainty for American families and businesses. The House recently had the opportunity to vote on President Obama’s budget proposal for FY2013, and unanimously rejected the President’s proposal, by a vote of 0 – 414, a clear indication that Republicans and Democrats alike did not believe the President put forth a credible plan to address America’s challenges.

The “Buffett Rule”

The President and his party continue to insist that raising taxes will somehow boost economic growth. They insist that the best way to grow the economy is to take more money from hardworking Americans and use it to fund the President’s out of control spending. The problem is that this tax increase, known as the “Buffett Rule,” would not just raise taxes on “wealthy Americans,” but would raise taxes on small business owners and investments during the worst unemployment crisis since the Great Depression. Democrats fail to acknowledge that we are facing a deficit and debt crisis because we spend too much, not because we tax too little. And while some continue to champion the Buffett Rule as a serious solution to reducing the deficit, the truth is that this tax increase, over a ten year period, would only reduce our nation’s projected deficit by less than one percent (0.7 %).

To put into perspective just how ineffective the Buffett Rule would be, consider how much revenue this new tax would generate compared to how much our federal government spends in one year. Over a ten year period, the

Buffett Rule would generate an average of \$5 billion in revenue per year, and the FY2013 federal budget is projected to spend \$3.803 trillion. That means that, in FY2013, these tax increases would pay for only 0.131 of federal spending. Of the 8,760 hours contained in one year, the Buffett Rule could only pay for just over 11 hours of federal spending. Instead of policies aimed at growing government and raising taxes on families and businesses, we must advance policies that boost private-sector job growth. Policymakers must put aside these gimmicks and work together to meet our generation's defining challenge of restoring America's promise and ensuring greater opportunities for generations to come.

Path to Prosperity

House Republicans have pledged to lead where the President has failed. The budget advanced by the House of Representatives on March 29, 2012 helps spur job creation, stops spending money the government does not have, and lifts the crushing burden of debt. The Path to Prosperity cuts more than \$5 trillion in spending from the President's budget over the next 10 years, putting the budget on the path to balance and the economy on the path to prosperity. Specifically, the budget:

Restores Economic Freedom – The Path to Prosperity fosters a better environment for private-sector job creation by lifting the debt-fueled uncertainty and advancing pro-growth tax reforms.

Changes Washington's Culture of Spending – The budget stops Washington from spending money it does not have on government programs that do not work. It locks in spending cuts with enforceable spending controls.

Strengthens Health and Retirement Security – The budget puts an end to empty promises from Washington, offering instead real security through real reforms. The framework established in this budget ensures no disruptions to existing health and retirement benefit programs for those beneficiaries who have organized their retirements around them, while at the same time building stronger programs that future beneficiaries can count on when they retire.

Provides for the Common Defense – With American men and women in uniform currently engaged with a fierce enemy and dealing with emerging threats around the world, this budget takes several steps to ensure that national security remains the Federal government's top priority, including the rejection of proposals to make thoughtless, across-the-board cuts in funding for national defense.

Lifts the Crushing Burden of Debt – The budget tackles the existential threat posed by rapidly growing government and debt, applying the nation's timeless principles to this generation's greatest challenge. It ensures that the next generation inherits a stronger, more prosperous America.

Making the Tax Code Fair, Competitive and Simple

Fair Tax Code

The tax code is full of deductions, credits and loopholes that let politically-connected companies avoid paying taxes. Every dollar that businesses spend lobbying for a better tax deal is a dollar they're not spending on making a better product. And, since every dollar hidden in a loophole doesn't get taxed – politicians make up for this lost revenue by increasing overall tax rates. So we need to close these loopholes. The U.S. corporate income tax, incorporating federal, state, and local taxes, equals just over 39 percent, the highest rate in the industrialized world. (The U.S. has overtaken Japan, which recently lowered its corporate rate.) On top of sending almost 40 cents out of every dollar earned to the government, businesses pay additional taxes including investment taxes and payroll taxes.

Competitive Tax Code

The budget we passed in the House of Representatives calls for closing the loopholes and lowering the tax rates. The President's bipartisan Fiscal Commission proposed something similar. Its plan would reduce the corporate tax rate to as low as 26 percent, and to lower the top individual rate that many small businesses pay to as low as 23 percent. If we lower tax rates, does that mean the wealthy pay less in taxes? It does not if we close loopholes. The people who use most of the loopholes are those in the top tax brackets. The money parked in these tax loopholes is taxed at zero. If you take away the tax loophole and lower everybody's tax rates, that money is taxed. It is taxed at a fair, more simple, more competitive tax rate so they can compete in this global economy. The President, however, would allow the top marginal income tax rate to rise to nearly 45 percent in 2013. This would be a direct hit on Wisconsin small businesses and jobs because 90 percent of businesses in Wisconsin pay the individual income tax, not the corporate income tax. These small businesses employ more than half of all private sector workers.

Simple Tax Code

Individuals and businesses spend over six billion hours and \$160 billion, every year, trying to understand and comply

with the tax code. Congress should simplify the tax code, not just by closing loopholes, but also decreasing the number of different tax brackets. Fewer brackets, along with lower individual rates, will make the tax code less complicated, and let more people keep more of the money they earn. America has had tough recessions before and we know that the secret to growing jobs and prosperity in America are through the ingenuity and the hard work of our businesses – of our small businesses, of our large businesses, of job creators. Our tax system should not reward people for coming to Washington and getting special favors. We want a tax system that rewards Americans for hard work, risk taking, entrepreneurship, investment and innovation. These ideas made America great in the past. We need these kinds of ideas going forward if we want to grow our economy in the future and compete in the 21st century global economy.

paul ryan on taxes (2012-08-20 08:36)

WASHINGTON – Earlier today, the U.S. House of Representatives passed legislation to prevent an across-the-board tax increase on families and job creators, set to take effect in January 2013. The legislation comes on the heels of analyses that the President's proposed tax increases would adversely impact job creation and economic growth. Following a bipartisan House vote to prevent a massive tax increase, Congressman Paul Ryan issued the following statement:

"The results are unmistakable: the President's insistence on taking more from hardworking taxpayers to fuel ever-higher Washington spending is not working. Economic growth has slowed to 1.5 percent and unemployment is stuck above 8 percent. Now the White House and leading Senate Democrats want to double down on these policies with massive tax increases that will hit small businesses, not to pay down the debt but to simply chase unsustainable spending increases. There is bipartisan opposition to this failed approach, and to provide certainty and confidence for job creators, the time to act is now.

"The House took action today to protect families and workers from a massive tax increase, which the Congressional Budget Office warned would push our economy into another recession.

"I applaud the leadership of House Ways and Means Chairman Dave Camp and my colleagues in Congress for their efforts to stop the President's massive tax increase, while paving the way forward for pro-growth tax reform. Keeping tax rates low, cutting spending, and advancing fundamental reforms to our government's structural budget challenges are the keys to get America back on track."

Social Security going broke (2012-08-20 08:46)

Social Security provides vital financial support for more than 54 million beneficiaries. Social Security also provides critical benefits to widows and those with disabilities. Unfortunately, Social Security faces a \$8.6 trillion deficit over the next 75 years. With 10,000 "Baby Boomers" turning 65 every day, it is essential that we work to preserve the programs these seniors have come to count on. As Chairman House Budget Committee, one of my top priorities is to preserve the Social Security safety net and make sure the program remains solvent for future generations.

Social Security is Going Broke

Social Security is funded by the payroll taxes of current workers to pay the benefits of current retirees. Projected long run program costs are not sustainable under current program parameters. The Social Security Trustees project that the cash flow deficits that began in 2010 will continue permanently. That means that to pay full Social Security benefits, the government must cut spending, raise taxes, or borrow more money to finance pension payments.

A central factor in the looming financial crunch is the fact that our society is aging. The "Baby Boom" generation has already started to collect their Social Security retirement benefits. As a result, there are fewer workers to support each retiree than when Social Security was created. Increasing life expectancy and the approaching retirement of more Baby Boomers continues to put increasing pressure on Social Security each year. Over the next several years, the number of retirees is expected to grow more rapidly than the number of individuals whose taxes will pay for future benefits. Because of this, the number of workers supporting each Social Security recipient is projected to fall.

The Need for Reform

According to the 2012 Social Security Trustees Report, beneficiaries will face a painful 25 percent benefit cut in 2033 when the Trust Funds are exhausted – three years sooner than projected just last year. At that time, even those who are currently on Social Security – those now 62 and older – may experience indiscriminate cuts in benefits at a time when they are increasingly reliant on the program.

The Path to Prosperity

A common reaction to the question of what to do about the problem with Social Security has unfortunately been, "What problem?" These individuals often claim that the Social Security trust fund will remain solvent for another 21 years, at which point the government could theoretically cover the shortfall by raising taxes. Others downplay whether any changes to Social Security will be necessary – they claim that sustained economic growth could take care of the problem all by itself.

Neither is correct. First, any value in the balances in the Social Security trust fund is derived from dubious government accounting. The trust fund is not a real savings account. From 1984 to 2009, the trust fund collected more in Social Security taxes than it paid out in Social Security benefits. But the government borrowed all of these surpluses and spent them on other government programs unrelated to Social Security. The trust fund holds Treasury securities, but the ability to redeem these securities is completely dependent on the Treasury's ability to raise money through taxes or borrowing.

Beginning in 2010, Social Security started paying out more in benefits than it collected in taxes – a trend that will skyrocket as the baby boomers continue to retire. In order to pay full benefits, the government must pay back the money it owes Social Security.

Those who wish to solve this problem by raising taxes are ignoring the profound economic damage that such a large tax increases would entail. Just lifting the cap on income subject to Social Security taxes, as some have proposed, would, when combined with the Obama administration's other preferred tax policies, lift the top marginal tax rate to over 50 percent. In reality, lifting the cap on income subject to Social Security will hurt the self employed – like many of the farmers and small business men and women in the First District – hardest as these individuals pay both the employee and employer share of the Social Security tax and further hamper the economic growth these individuals can provide.

Most economists agree that raising marginal tax rates that high would create a significant drag on economic growth, job creation, productivity and wages. This nation cannot fix its retirement-security system by leaving young families with nothing to save.

I believe there is a bipartisan path forward on Social Security – one that requires all parties first to acknowledge the fiscal realities of this critical program. The President's Fiscal Commission made a positive first step by advancing solutions to ensure the solvency of Social Security.

The Commission suggested a more progressive benefit structure, with benefits for higher income workers growing more slowly than those of workers with lower incomes who are more vulnerable to economic shocks in retirement. It also recommended reforms that take accounts of increases in longevity, to arrest the demographic problems that are undermining Social Security's finances.

In addition, there is bipartisan consensus that Social Security reform should provide more help to those who fall below the poverty line after retirement as part of any reform that make the program solvent. As part of a plan to strengthen the safety of that nation's most vulnerable citizens, lower-income seniors should receive more targeted assistance than those who have had ample opportunity to save for retirement.

While certain details of the Commission's Social Security proposals, particularly on the tax side, are of debatable merit, the Commission undoubtedly made positive steps forward on bipartisan solutions to strengthen Social Security. The House-passed budget builds upon the Commission's work, forcing action to solve this pressing problem by requiring the President to put forward specific ideas on fixing Social Security.

In a shared call for leadership, the budget also puts the onus on Congress to offer legislation to ensure the sustainable solvency of this critical program. As Stephen Goss, Chief Actuary for the Social Security Administration, put it in a House Budget Committee hearing, "Our Trustees and everybody who speaks on this has opined extensively about the value of acting sooner rather than later, so that we can have gradual changes phased in and we have more options if we act relatively soon."

Both parties must work together to chart a path forward on common sense reforms, and the House-passed budget provides the nation's leaders with the tools to get there.

Best places in US for photos (2012-08-23 21:42)

Asheville, N.C.

"GMA" viewer Alan Ostmann of Candler, N.C., nominated Asheville, a small city tucked in the Appalachian Mountains rich with art, architecture and outstanding scenery.

"I live just outside of Asheville, N.C., [bordering] the Pisgah National Forest in possibly the oldest mountains on the planet," Ostmann wrote in his submission. "Four miles from my home is the Blue Ridge Parkway. The forest and parkway allow some of the most spectacular views I have seen anywhere in the world. I hike and bike the area daily and am always amazed at the beauty nature can reveal to us."

Tessa Lemke

2. Aspen, Colo.

Aspen is an authentic mountain town best known for its world-class skiing in winter months and as an outdoor playground for mountain biking, rafting, fly fishing, rock climbing, hiking and more in warmer months.

Tessa Lemke of Carbondale, Colo., submitted a photo of the magnificent Pyramid Peak, part of the summits of the Maroon Bells, a short drive from Aspen, which gave us our inspiration.

"Every drive into Aspen has this beautiful view – ever changing from red rock to snow-covered," she wrote. "To me it doesn't look real ... like something from 'The Lord of the Rings.' Breathtaking!!"

3. Cape Cod, Mass.

Cape Cod has long been a favorite summer vacation destination made popular by the Kennedy clan and others. The 400-square-mile peninsula is filled with beaches and caters to tourists, but the cape's natural beauty is what compelled Gary Accabo of New Haven, Conn., to nominate the area.

"I have visited Provincetown, Cape Cod every summer since 1977. Race Point is the most gorgeous part of the National Sea Shore. To be there in the evening to experience a sunset is one of the most breathtaking visions to witness. Its beauty is forever etched in my mind," Accabo wrote.

Terri Rose

4. Destin, Fla.

Dramatic sunsets, miles and miles of seashore and sugar-white sand all make Destin, Fla., the "Most Beautiful Place in America" for "GMA" viewer Terri Rose of Niceville, Fla. When Rose submitted her description of the seaside town, nestled in Florida's northern panhandle, we knew we had to find that spot.

Dolly Albers

5. Grand Tetons, Jackson Hole, Wyo.

The stunning view of the Grand Teton mountain range has kept viewer Dolly Albers of Peoria, Ill., coming again and again to this spectacular spot.

"Just sit ... and look out at those mountains anytime of the day or night. No place in America is more beautiful," Albers wrote. "[We] went there for our 25th [wedding] anniversary, again for our 40th, and last year for our 55th! We've been there in the winter to ski, spring to see the wild flowers, summer to hike and raft, fall to see the color changes. I close my eyes and see that view - what more could you want?"

Lisa Basham

6. Lanikai Beach, Oahu, Hawaii

Lanikai Beach is a strip of paradise hidden on the island of Oahu.

"How could this not be the most beautiful place in America?" wrote Lisa Basham of Kailua, Hawaii. "Bright, white, soft sand and clear, blue, warm water. This is the perfect beach to have a romantic picnic or get married. You can also have a great time with friends snorkeling, stand-up paddle boarding, or kayaking out to the beach on the Mokulua Islands."

Courest Lisa Gecelosky

7. Newport, R.I.

Viewer Lisa Gecelosky of Bernville, Pa., told us about Newport's wharfs, historic mansions, and famed Cliff Walk along the eastern shore, which caught our eye and landed this destination a spot on our list. The New England coastal town boasts spectacular scenery and a vibrant downtown area that makes it a perennial tourist favorite.

8. Point Reyes, Calif.

Outside San Francisco, Point Reyes National Seashore is a don't-miss destination. The park protects over 71,000 acres of wildlife and coastland, but is also a place to take in the great outdoors with hiking, camping, horseback riding and more. The view along this famed peninsula inspired Kathleen Rockwell of Oviedo, Fla., to send "GMA" this photo.

"I found the most [beautiful] place in America so far to be in California. I visited there in January this year with my husband ... We drove over there to the top of the mountain and got out and walked around. The view looking at the Pacific Ocean from there was breathtaking – you felt like you were in heaven," she wrote. "It was the most beautiful site I have ever seen that it made me cry ... seriously."

Robert Fruggiero

9. Sedona, Ariz.

Sedona's natural beauty takes your breath away. The Red Rocks inspire such awe that we had to name it one of our Most Beautiful Places in America.

"The Red Rock Country in and around Sedona, Ariz., is one of the most beautiful and peaceful places I have ever visited in the U.S.," Robert Fruggiero wrote to "GMA." "This picture was taken from up on Bell Rock ... during a yearlong cross-country RV trip."

Jim Madole

10. Sleeping Bear Dunes, Mich.

Sleeping Bear Dunes National Lakeshore, tucked in the northwest corner of Michigan's Lower Peninsula, is one of the nation's best-kept secrets. That's why "GMA" viewer Jim Madole of Grand Rapids, Mich., nominated the spot.

"It is peaceful and serene, a place for gazing out into the world, night or day, and realizing that the universe is truly a magical, majestic mystery, and humans are just a very small part of it all," he wrote in his submission. "Here at Sleeping Bear, I sit in awe and wonder at the perfection of Mother Nature."

Import your Nintendo Magazine (2012-08-24 00:20)

I hate this stupid Nintendo Power magazine going out of business being bad hype. Guess what? You can import your magazine from the United Kingdom. The Official Nintendo Magazine is still published. There is also Nintendo Gamer . My personal story was I collected Game Informer (GameStop publication), the largest of all videogame magazines, and I stopped paying for it due to IGN, Gamespot, and Game Informer.com . The reviews were above average compared to game sites, because these were payed talent who had Bachelor of Liberal Arts degrees so article organization was decent. I really enjoyed the retro sections inside it, because IT SOUND BETTER THAN GAMESPOT RETRO BLOGS (no offense). Game Informer did four page stories on Panzer Dragoon Saga, Valkyrie Profile, Radiant Silvergun and rare 32-bit videogames. On top of that the magazine had quizzes and Tokyo Game Show & E3 coverage. That's why it is the best selling game magazine you know.

SHMUPS X - Bought Dodonpachi Daioujou (2012-08-24 19:59)

After Ibara, you'd think that would be my last PS2 SHMUP. Think again! Ibara was a pretty good SHMUP, but Dodonpachi Daioujou would be even harder just like DoDonPachi for Sega Saturn.

Disable Linux suspend options RECOMMENDED (2012-08-27 16:03)

I warn everybody to edit their options to disable it.

Mine runs Linux Mint 13. I had no cursor on my desktop. My down button hit Suspend by mistake. It wouldn't turn on correctly for an hour. went back to turn it on 40 minutes later and for once the screen appeared. I lucked out. This works for Ubuntu, Linux Mint, Fedora thus far.

Terminal:

```
gksudo gedit /usr/share/polkit-1/actions/org.freedesktop.upower.policy

Top 80 Saturn games (2012-08-29 06:56)**80. Soviet Strike**

The fourth Strike game, and also the first to be made for 5th generation consoles. This has the same great gameplay of the earlier games with the improvements to graphics and music that you'd expect, and a little more emphasis on story, told with new FMV cut scenes. Soviet Strike was initially a PS1 port, but unlike most ports to Saturn this version was actually improved, with some new graphical elements added like improved lighting.

79 Rayman

Those afraid that the old 2D style platformers would die out under a mass of new 3D games had their fears put to rest with this great early platformer. Rayman has some truly fantastic, sumptuous backgrounds and art design, with the Rayman character himself being quite a likeable, well designed hero. The levels are well thought out, and kept fresh by the fact that you gain new moves as you progress through the game. Hard as hell though!

78 Manx TT Superbike

Manx TT was just one of the many good arcade racers Sega were churning out back in the mid 90s and ended up being ported to the Saturn pretty well, with nice graphics and a good frame rate. Those who are familiar with Sega's arcade games will know the score here, you race around the tracks (this time on a bike) aiming to hit each check point before the timer runs out, if that happens its instant game over. Sadly, what makes a great arcade game doesn't always translate to the home though, which is why Manx TT has dropped places a bit, it really should've had some extra modes and tracks added to it as its a little short on longevity overall for its period.

77 Decathlete/Athlete Kings

A very accurate port of Sega's arcade game, Decathlete is your general Track N' Field style game, with updated 3D graphics and some more in depth rules.

76 Die Hard Arcade/Dynamite Deka

A very fun, brainless 3D beat-em-up where you run around the stages punching out the bad guys and picking up and using a plethora of different objects scattered around the ground. The fighting system is very fluid, and feels very solid, giving the game very high pick up and play value.

75 Guardian Force

Multi-directional scrolling shmup where you play as a tank. Guardian Force is very much a welcome diversion from the hoards of spaceship shooters on the Saturn, apart from the change of theme, and scenery, you have the unique ability to turn the turrets around independently to fire in one direction whilst moving in another. The usual elements of a good shmup still apply, loads of action, great boss fights, 2-player co-op, and some exciting set pieces.

74 Bubble Symphony

At last, after years of hiatus came the long awaited true sequel to Bubble Bobble. Bubble Symphony did not disappoint, it carries on the excellent simplistic gameplay of the original, whilst adding some small yet notable new elements, such as multiple endings, the choice of what paths and levels you want to play, and the dragons gaining new charge-up abilities. Taito also gave the presentation the kind of overhaul you'd expect, and even infused the game with huge levels of fan service, with many of the stages and bosses based off of classic games from the companies history.

73 Sim City 2000

Sim City returns with masses, and masses of more stuff, and a new futuristic style. As usual the game becomes totally engrossing for anyone who puts the time in, and the hours burn away in no time. The Saturn version is very good, but as is the case with a lot of these strategy games it loses a few points due to the lack of mouse.

72 Enemy Zero

This stars the character from an older game from Warp "D", and has similar interactive FMV based puzzle adventure gameplay, but this time with specific 1st person shooter style sections. The horror vibe is very well played, with occasional gore and a very real sense of dread throughout, but the rigid controls and slow paced gameplay may not be for everyone.

71 Gungriffon

Gungriffon is a 1st person mission based mech game. Unlike a lot of the mech games of the time it mainly

emphasises fast action, shooting based gameplay. It has you piloting a fairly manoeuvrable mech that can jump high up into the air raining death on those below, generally creating carnage and blowing stuff up (though later levels do require more careful strategy). Its a little bit short, but is a fun game, and runs very well with smooth movement, decent draw distance and a good frame rate.

70 Last Bronx

A weapons based 3D fighting game (think Soul Blade). Last Bronx goes with a more fast paced, action orientated style of gameplay, and as such is generally considered a little lightweight, but I find it to be a very fun, and accessible game, the graphics and style are also very impressive.

69 Mega Man 8

The first of the main branch Mega Man games to appear on 32-bit, Mega Man 8 is a bit of a black sheep of the family, and is lacking in innovation, but is still a very solid effort. Mega Man 8 has all the hallmarks of the series, with some nice updated graphics, and a new emphasis on some unique abilities. The game is also best played on the Saturn, as it has improved graphics and some extra boss fights with series favourites Wood Man and Cut Man from Mega Man 2.

68 Mech Warrior 2

When porting Mech Warrior to consoles the developers decided to make the game more arcade action based to cater to the console audience, I think it was probably a wise decision overall as the game works well as a console shooter. Here you have a set of objectives to complete, and basically have to pilot mech's around the levels blowing stuff up, there's a lot of options, including choice from a whole load of different mech's with different abilities, and there's two campaigns to play through too. The Storyline is also quite detailed, and in-depth, and sets the scene well.

67 Need For Speed

Electronic Arts try their hand at the arcade racing genre with this speedier rendition of their Need For Speed series (the original game on 3DO was more of a realistic racer). Need For Speed manages to rival some of the big arcade ports of the time, with fast, smooth gameplay, that also manages to retain some of its predecessors attention to detail, with car models all having their own handling and feel.

66 Elevator Action Returns

Elevator Action Returns looks simple at first, but don't let that dissuade you as its still a very fun game with more to it than it first seems. You run around levels shooting the enemies and disarming bombs, strategic thinking often helps, with leaving bombs on elevators to be delivered to enemies, and shooting out the lights both particularly helpful tactics to use. There's also a 2-player option, which is always a welcome addition to any game.

65 Herc's Adventures

Here is a very fine adventure game from Lucasarts, it plays kind of like a cross between Zelda games, and Zombies Ate my Neighbours (its by the same company as Zombies). You travel around the world collecting a variety of different weapons and equipment, each time you successfully accomplish something, or acquire an important item new areas of the map are opened up for you (and your team mate if played in 2-player) to explore.

64 Sega Worldwide Soccer 98'

This series truly set the bench mark for 32-bit football games at the time, and was the best choice out there on any console for a decent period. Worldwide Soccer excelled with its impressive graphics and in depth gameplay, for many at the time (at least in the UK) the series was even the killer app worth buying a Saturn for.

63 Puyo Puyo Sun

The third game in the classic puyo series of puzzle games (previously released in the west as Dr Robotnick's Mean Bean Machine and Kirby's Ghost Trap). Sun doesn't really do anything that new for the series (group the blobs together in three of a colour), but the gameplay is as good as ever, and there's a nice graphical overhaul.

62 Iron Storm

Part of the long running and popular Daisenryakou series of grid based strategy games. Iron Storm is one of the only games in the series to get a western release, but luckily its also one of the best examples. The game takes place during WWII, and allows for a lot of "what if" style outcomes, with the Germans, say, winning the battle of Britain, or the Japanese invading the United States.

61 Virtua Cop

When Virtua Cop came out in the arcades in 1994 Lightgun games were a dying breed, years of no innovation in the genre had caused it to stagnate and lose favour with the videogame playing populace. Virtua Cop was a breath of fresh air, with its crisp 3D visuals, dynamic camera angles, points multipliers, and threat level indicators, it actually signaled a turnaround and re-popularising of the genre. The Saturn port of the game was first rate, and alongside Sega Rally and Virtua Fighter 2 really raised the bar for 3D Saturn games at the time, totally shocking a lot of people who'd previously thought the Saturn's 3D capabilities were only substandard. The only reason it appears lower down in this list is because I feel its superior sequel manages to trump it in most aspects.

60 Magic Carpet

Peter Molyneux's interesting, unique, and in some ways revolutionary shooter/strategy hybrid. In the game you fly around the map on a magic carpet killing monsters and collecting mana to store in your home castle, the more mana you have, the more spells you can cast, and as your castle becomes more built up, it even spawns its own AI guards to defend it. The strategy elements really compliment the action based gameplay, adding that compulsive "improve yourself" aspect to the proceedings. The Saturn version doesn't quite control as well as it did on the PC, but its still a good port.

59 Magic Knight Rayearth

Magic Knight Rayearth is an action Adventure game with a very troubled history, the game was originally released in 1995 in Japan, but due to disputes between the localisation team, and Sega it didn't actually see release in the west until 1998. The game follows the usual Zelda adventuring style, but with a tag team system between three characters with different weapons, and much more emphasis on storyline and FMV's. Its a shame it was released so late, as though the school girl centred storyline is not for everyone, the game would've been a very solid, and likeable early Saturn release.

58 Baku Baku Animal

Sega's take on the block falling puzzle genre has you matching up animals with their favoured foods. The combo system here is very well implemented, and 2-player matches are a lot of fun. I've decided to drop positions for Baku Baku mainly because its a very similar game to Puzzle Fighter II, which I feel is superior, but Baku Baku is still a valid purchase of its own as it still contains its own style, and a few of its own gameplay nuances.

57 Dungeons and Dragons Collection

This is a collection of two of Capcom's arcade beat-em-ups that had previously been unreleased for home consoles, Dungeons & Dragons: Tower of Doom, and Dungeons & Dragons: Shadow of Mystara. The gameplay includes a lot of aspects not commonly seen in beat-em-ups, such as equipment collection, spellcasting, and experience points. These features, coupled with a very competent fighting engine and the classic Capcom art style make D & D Collection one of the best beat-em-ups ever made.

56 Silhouette Mirage

As always Treasure provide yet another unique take on a staple genre here. Silhouette Mirage is a platformer with the unique aspect being the fact that you change between two colours depending on the direction you're facing, only enemies of the opposite colour take damage, whilst those of the same colour become weaker, this gameplay mechanic was re-used for their later game Ikaruga. Apart from the main gameplay mechanic you have all the usual hallmarks of a Treasure game, nice graphics, loads of style, impressive set pieces and memorable boss fights.

55 Puzzle Bobble 3

Puzzle game where you shoot coloured balls to the top of the screen trying to match three at a time. Not a lot has changed with the series since its inception, there's some new modes, and bubble type's, but mainly Puzzle Bobble 3 is an incremental update, its still as good as ever though, and worth picking up if you don't already own one of the older games.

54 Space Hulk

Hardcore strategy game based on the Games Workshop board game of the same name. You manoeuvre a team of armoured soldiers around the levels following set objectives, being careful to position each unit as tactically as possible to secure each area and control the constant influx of enemies. The story mode is excellent, with you slowly rising up the ranks as time goes on, but the training modes (which allow you to play through famous moments

of the Warhammer history) are equally great, and generally more accessible to beginners.

53 Real Bout Special

This belongs to the Fatal Fury series of games, SNK's oldest classic fighting series. Real Bout Special contains all the usual balance and finesse present in all of SNK's fighting games, but what makes it different to the plethora of other similar games on the Saturn is a system of multiple fighting planes, you can tactically jump between the background and foreground to avoid attacks and plan your next move, this changes the pacing and style of the fighting.

52 Warcraft 2

Clearly inspired by the quintessential Command and Conquer, Warcraft 2 may not be quite as in depth as its inspiration, but unlike C & C it simply excels at being full to the brim of charm and humour. Like C & C the gameplay here is classic building forces and managing resources.

51 Layer Section/Galactic Attack

Layer Section is a very polished vertical shooter with some well judged gameplay and excellent pacing. Apart from the usual shooting, and power-up collection, here you also have a homing laser which locks onto enemies below you and releases a barrage of shots. Anyone who's considering starting a collection of Saturn shmup's should absolutely start here, this manages to have one of those rare combinations for Saturn shooters, not only is it one of the best it's also one of the cheapest and easiest to obtain.

50 Croc

Unfortunately the Saturn didn't get many 3D platformers, with Croc seemingly being the only game on the system which even comes close to attempting a full Mario 64 style world. But luckily, whilst the controls take some time to get used to (make sure to get the analogue controller for this one) Croc is a very respectable take on the genre, it contains some nice level designs, good graphics, and a surprising amount of charm.

49 House of the Dead

After re-popularising the lightgun genre with Virtua Cop, Sega came up with yet another seminal game for the period with the House of the Dead. House of the Dead adds some real chills and tension to the genre, with you desperately trying to shoot the heads off the gruesome Zombies before they close in on you. The classic just loses a few points here because graphically it's a little on the disappointing side, certainly not standing up to the excellent Virtua Cop ports on the system.

48 Albert Odyssey

Albert Odyssey is a turn based RPG in a similar vein to those you'd expect to see on the SNES (and indeed Albert Odyssey started off as SNES project but was moved to Saturn). Its plot involves a boy whose parents died when

he was a baby that ended up being raised by Harpies (more like angels). The game doesn't hugely stand out compared to other RPG's on the system, but the gameplay is handled very well, the graphics are great, and the dialogue is well done and funny.

47 Magical Drop 3

A frenetic puzzle game where you pull the coloured spheres down, and then fire them back up to make combos of three or more. For this sort of puzzle game, Magical Drop is actually unexpectedly fast and furious, I'd even go as far as to call it action packed! Tons of fun, and very under appreciated import.

46 Sexy Parodius

Probably my favourite game of Konami's Parodius series (which is a wacky offshoot of its classic Gradius series). Here, apart from the improved graphics, more impressive weapons, and plethora of different characters, you've also got various mission objectives added to the levels, such as shooting down a set number of enemies, or collecting a set number of coins, whether or not you successfully complete these missions decides which branching path you'll take for the next level, which makes for some interesting gameplay. Don't let the title fool you into thinking there's going to be a lot of risqué imagery though, the elements contained here are pretty harmless and tame.

45 Theme Park

Theme Park has you creating and running your own theme park, building rides and taking careful control of your funds. The game is much more fun than it sounds, and is very accessible and addictive.

44 Samurai Shodown 4

A big improvement and a huge return to form for the series after Samurai Shodown 3, Samurai Shodown 4 just felt like it was a better balanced, more polished, and more fun to play game. Samurai Shodown is a very fast, weapons based fighting game, there's some truly beautiful, sumptuous backgrounds here, and the character designs are first rate too.

43 Death Tank Zwei

Whilst very crude looking, Death Tank is a fun party game for up to seven people simultaneously, it has you adjusting the trajectory and power of shots in real time (not turn based like Worms), trying to kill the other players. Everytime you kill a player you get money to spend on new weapons between matches, such as nukes, and powerups that allow your tank to fly. Games generally become very chaotic matches of team ups and broken alliances. Death Tanks is actually only given away as an extra with many of the Lobotomy programmed first person shooters, the easiest way to get it is to put on Duke Nukem whilst having a Quake save game on your Saturn internal memory.

42 Super Puzzle Fighter II

As mentioned earlier, quite similar to Baku Baku, but here you have to match coloured "crash" gems with their respective coloured blocks, instead of animals. In my opinion this is the better game out of the two, as it has better

presentation, more straightforward gameplay (its harder to keep in mind what animal eats what in Baku, although that difference could be seen as a strength for those interested in more complicated gameplay), and a few other minor new inclusions which raise it that little bit higher in quality.

41 DoDonPachi

One of the more popular and well known of the bullet hell shooters. If anyone is unfamiliar with the sub genre, DoDonPachi is effectively like a traditional vertical scrolling shmup, but with elaborate bullet patterns swarming the entire screen at pretty much all times, to make up for the number of bullets, only a small section of your ship is actually vulnerable, shots pass through the rest of you doing no harm. A word of warning to those new to shmups though, these types of shooters are really aimed towards the hardcore fans.

40 Dark Savior

Pseudo sequel to the under-appreciated, cult classic Mega Drive game Landstalker (same developer and same gameplay, but different characters and style). Dark Savior is an isometric adventure game focusing on puzzles and platforming. Despite some great new additions, such as the moveable camera, and alternate levels (based on performance) Savior doesn't quite live up to its predecessor (there's not quite as much charm and polish), but it does still manage provide a very involving and interesting adventure nevertheless.

39 Deep Fear

Deep Fear is a very good survival horror game inspired by Resident Evil. Its set in an underwater base that has been take over by a parasite that mutates the crew into monsters. The underwater theme helps to lend a claustrophobic, trapped feel to the atmosphere, the graphics are first rate, and the puzzles well thought out. In fact, this is exactly the sort of game Sega needed earlier on, unfortunately it arrived a little to make a big difference, and its lateness also adds to the rarity and cost. In regards to the huge price, is it worth it? truthfully I have to say definitely not to be honest, but if you find it at a reasonable price then make it a priority buy.

38 Legend of Oasis/Story of Thor 2

Another sequel (in this case prequel really) to a great Mega Drive game. Beyond Oasis is a Zelda-esque top down adventure game, where you travel the lands fighting monsters, picking up new weapons and increasing your health. Like its predecessor Legend of Oasis has much more of an emphasis on the fighting aspect of gameplay than the Zelda games, with a plethora of different hand to hand combat moves available, there's also a bunch of unique elemental spirits to collect throughout the game, which help you fight, and give you access to abilities to solve the game's puzzles with. Its a great game, and would've been higher in the list if it wasn't occasionally a little confusing at times.

37 Thunder Force V

Technosoft continue their consistently excellent series here with the fifth game (2-4 were all on the Mega Drive). The developers decided to go with a more 3D graphics style with this game and I have to say that I find it a little inconsistent, some sections look great, whilst others look a little bit dated. What hasn't dated however is the gameplay, which delivers everything you'd expect from a TF game (namely full of action, set-pieces, and clever

weapon designs). TFW also introduces a new weapon, the Free Range, which is tricky at first but a joy to use after its been mastered. Just to add one other thing, there's a boss fight in this game that has you going up against the ship from the earlier games in the series, with a remixed TFIV track playing in the background, and I must say as a fan of the series this fight is actually one of my absolute favourite video gaming moments ever, its awesome.

36 Twinkle Star Sprites

Here we have fantastically original and under appreciated hybrid of shmups and block style Vs puzzle games. Basically you shoot the oncoming enemies and send them to you opponents side of the screen, each time they're hit back they become faster and more dangerous. The Saturn version of this game has actually been improved over the Neo Geo original, with extra bits and pieces such as presentation improvements and an extra character, these were not carried over to the Dreamcast version, which makes this arguably the best of the ports out there.

35 Dead or Alive

Whilst Virtua Fighter was always considered the deep fighter, Dead or Alive went for more of a fast, fun, and accessible style (it also included big bouncing boobs of course). The first game of the series was ported excellently to Saturn, and actually contains some of the absolute best graphics on the entire system, looking better, and with fewer compromises than even the PS1 version released a year later.

34 Battle Garegga

This is a great, traditional style vertical shmup that's extremely action-packed, and throws very impressive amounts of action and enemies towards you at all times. The weapon system uses programmable options like those found in Musha which basically have a number of different preset actions that can be changed between on the fly depending on situation.

33 Daytona CE

This'll probably be a bit of a fairly controversial decision. There were two Daytona games released on the Saturn, and the majority seem to prefer the original port. I, however, have decided to recommend the second one, Daytona CE (more accurately the Japanese version of Daytona CCE, which included the original music). In my opinion its the more complete package overall. I'm going to break down the differences to help people make their own decision though. Daytona is an arcade racing game of the checkpoint style, initially it was ported to the Saturn in a very bare bones manner, the graphics were fairly poor, and there were no real extra modes to speak of, it did however play pretty accurately to the arcade version. It was then updated as CCE, CCE has an extra 2 courses, bringing the track count up to a more respectable 5, the graphics have been improved in every way, and there's also a split screen option for two player, on the other hand, the handling isn't as accurate to the arcade as it was in the original port (though analogue support, and fiddling with the options does help), so purists tend to dislike it.

32 Kings of Fighters 97'

SNK were one of the, if not the biggest competitors to Capcom in the fighting game business. Their games

started off fairly derivative of Capcom's, but they quickly started to branch off and blaze their own trail in regards to both gameplay mechanics, and character designs. The King of Fighters series is perhaps their most well known, and well respected series, its main difference to other fighters of the time is its team based gameplay, instead of picking a fighter and playing you must pick a team of three, each of which have to fight one after the other. I've gone with KOF 97' mainly because I find the storyline to be more interesting and in depth than the others available on Saturn

31 Metal Slug

At a time where 2D run n' guns were becoming few and far between, Nazca' Metal Slug series appeared out of nowhere to give fans something to cling to during the turbulent times. Metal Slug is your classic hardcore arcade game, it doesn't let up on the action for a second, with a constant barrage of enemies and explosions going off all over the screen at any given time, there's bosses, and vehicles to jump into, great music, and a 2-player co-op feature. Another area where Metal Slug really stands out is the presentation, the artwork is very stylised, and there's a lot of visual humour throughout the experience.

30 Worms

Never before has so much charm been infused into so few pixels. From the outset Worms is a simple strategy game, you command a team of four and take turns in choosing and using a selection of different weapons each of which are useful for different situations. But the randomness of the terrain design, coupled with its destructibility and the diversity of the weapons lends a copious amount of on the spot strategic planning to the proceedings, making it one of the best, and deepest multiplayer games in videogame history.

29 Guardian Heroes

Guardian Heroes is effectively a Final Fight clone with some minor rpg elements thrown into the mix, but Treasure did a very good job at increasing longevity by adding some important new features, branching pathways coupled with collectable characters (for use in the fun, but lightweight 6 player versus mode). These additions make the gameplay a touch more interesting, and create a real incentive to play through multiple times.

28 Vampire Savior

Even to this day many people seem to think of the Darkstalkers series as simply Street Fighter with monsters. Certainly at first the most easily apparent difference between the two series' is the graphics, with fantastic, wacky, and generally over the top character designs and artwork being the style of Darkstalkers, but dig deeper and you find a number of gameplay elements which, whilst not causing the game to stray too far from the SF template, help to give it a feel of its own. Firstly the super gauge works very differently here, working more as a modifier of the special moves, and there's original elements such as dashes, and follow up attacks (jump on people when they're down), all of which increase the pacing in comparison to Street Fighter.

27 Virtual On

A brilliant fighting game from Sega, Virtual On has you dashing around in the fully 3D world firing off barrages

of shots, taking cover behind objects, and rushing in close for melee attacks. For a 5th generation 3D action game it all works unexpectedly fast and smooth, and is a very unique and exciting experience, even the two player split screen mode works very well. Definitely one of the 3D Saturn games fans at the time could be proud of.

26 Batsugun

Often referred to as the first bullet hell shooter due to its use of elaborate bullet patterns and small ship hit boxes, Batsugun comes from Toaplan, the same company that made the excellent Fire Shark, Truxton, and Hellfire for 16-bit. Gameplay wise it fits somewhere between older, traditional vertical scrollers, and later bullet hell games like DoDonPachi, it also uses an interesting weapon system that involves gaining experience points through as you destroy the enemies throughout the levels.

25 Mega Man X4

Mega Man X4 doesn't do anything hugely different to its forebears, but when the core gameplay is this good who cares? Capcom carried on with their excellent, action packed Mega Man platforming and shooting action, coupled with the newer adventuring aspects added to the SNES games, and improved the graphics and sound for the 32-Bit generation. The level designs here are as good as ever before, and its all just very playable and addictive.

24 Command and Conquer

If any game is responsible for defining the real time strategy genre it has to be Command and Conquer, it perfectly expanded on its predecessor, Dune II, and really helped to popularise the genre. In the game you mine raw materials and create buildings, each of which give you access to more options and allow you to build up more units, it all very compulsive stuff, and the Saturn port, whilst not perfect without a mouse, still works very well.

23 Shining the Holy Ark

Holy Ark is the direct sequel to the Mega Drive game Shining in the Darkness, and it represents a very different sort of JRPG to what was commonly seen during the 5th generation. Like its predecessor the majority of the game is played with a 1st person view, you walk around the towns and dungeons as though you yourself are the character, with your party appearing onscreen and turning to face you when they converse. Gameplay includes the usual stat based menus you'd expect, but there's also more emphasis on solving proper, well thought out puzzles, many of which require careful planning, and this is actually the area where Holy Ark is most successful, because even if you removed everything else you'd still be left with solid gameplay, which is more than can be said for some JRPG's out there.

22 Burning Rangers

This has to be one of the fastest, most action packed 3D games from the entire generation on any system. The gameplay has you running around huge buildings putting out fires and rescuing people, but its the fast pacing, agile moveset, and impressive boss fights which really stand out to create an adrenaline pumping experience. The game would've scored higher but there's a few points that hold it back somewhat, the game is very short at only 4 levels (though extra replay value is included by the level layout changing) and the graphics can be very ropery at times,

however, thankfully these complaints don't go too far in souring the overall experience.

21 Quake

This was the port nobody expected the Saturn to manage, but famed Saturn developers Lobotomy, the group who had cut their teeth with the impressive Saturn FPS Powerslave, and proved time and again their programming skills (bet on them making a few more appearances later in this list) managed to pull it off with consummate skill. Quake is a very grim, very atmospheric take on the Doom style corridor shooter, its pretty violent for its time, and is packed full of the sort of secrets which made Doom so fun to explore. As mentioned earlier the Saturn port plays and looks very good, its a little grainier than the PC version, and the frame rate dips at times, but overall its certainly a very respectable version of the game.

Hyper Duel

From the same company that made the classic Thunder Force series, Hyper Duel easily lives up to its pedigree (frenetic action and impressive set pieces) whilst offering a very different and original experience. Apart from going for a more mech-based Macross feel (you can transform between robot and ship), the game also deviates from the TF series by allowing you to collect extra supporting ships which independently fly around the screen helping you, their mortal nature tends to push you towards protecting them, providing covering fire so as to allow you to accumulate a small gang as you progress. Hyper Duel is also a phenomenal arcade port, every aspect of the game was actually improved during its transition to Saturn, graphics, music, and gameplay.

20 Marvel Vs Street Fighter

Here's yet another reason for the Saturn's reputation for being a fighting game powerhouse. Marvel Vs Street Fighter sports a very different feel to many of the other Capcom games out there, its just a lot more over the top and hectic, and the ability to swap between two characters at any time in-game and do combination attacks lends a very different (and very fun) style to the gameplay. As usual this was a very accurate port of the arcade game (unlike the dire PS1 version which should be avoided at all cost) with all the features and animation pretty much intact.

19 Soukyugurentai

Souky is yet another beautifully crafted scrolling shmup for Saturn. The weapon system is very well implemented, being somewhat similar to the one used in Layer Section, pressing the button fires, whilst holding it down locks onto enemies below you that are within range, letting it go sends homing missiles to all targets highlighted. Apart from the weapon system Souky is simply very well paced, and includes some awesome boss fights, but what really stands out is the truly commendable, and artistic design, which creates an atmosphere which is second to none.

18 Virtua Cop 2

After many people did a double take after seeing the first Virtua Cop ("but I though Saturn couldn't do 3D?") Sega came back with this sequel, which looked even better than the last! Virtua Cop 2's main improvements over the original lightgun classic (apart from the graphics) have to be its faster, more intense pacing, and increased longevity (an important element where it comes to home ports), the game's inclusion of branching paths means its pretty much double the length of the original, and the introduction of the 3-shot multiplier (shoot someone three times in

different places in quick succession to get a higher score) rewards replay and mastery.

17 Dragon Force

Dragon Force is a very addictive game which balances both RPG and strategy element extremely well. The battles are huge in scope, and very impressive, allowing you to see the armies battle against each other on a unit by unit basis, while you, as the general throw around spells. The developers really did do an admirable job in all areas, the campaign is very long, and made even longer by the inclusion of multiple endings for each character, and they do a good job at keeping the story interesting, and involving.

16 Saturn Bomberman

As far as I'm concerned this is actually the best Bomberman game ever made, and the best Bomberman ever likely to be made. Apart from the fact that it has what is, in my opinion the best selection of power-up's for balanced multiplayer, Saturn Bomberman also feels like Hudson went to town adding fan service, they even included the option to play as characters from their other, non-Bomberman series, such as Master Higgins from the Adventure Island series, and Bonk. There's options for up to 10-player simultaneous local play, and even the campaign mode (which includes 2-player co-op) is surprising well crafted, with good attention to detail and presentation.

15 Duke Nukem 3D

Lobotomy do it again with this brilliant port of Duke Nukem. If there's anyone out there that isn't familiar with the game, Duke Nukem was one of the highest profile PC releases to come in the wake of Doom, the game contained loads of fast action, some neat new inclusions such as the jet pac, and most notably, interactive environments which, amongst other things contained loads of adult humour. This version is very accurate to the original, its very smooth, and (as far as I can see) uncensored too.

14 Fighters Megamix

Sega's amalgamation of their Fighting Vipers, and Virtua Fighter series' (both some of the most respected home fighting series' for that period) created yet another brilliant game, and easily one of the best value for money deals of the time with its huge character roster. Fighters Megamix feels more like FV in gameplay than VF, emphasising faster, more action packed gameplay, the graphics are also more akin to FV, gearing more towards lighting effects than VF's high resolution.

13 Wipeout XL

A very good port of the PS1 classic. Wipeout has to be one of those series' which really shines with the attention to style and detail, having a very distinct look of its own. The gameplay is some of the deepest out there, with much skill and perseverance required for the harder levels, and the tracks themselves are well designed and respectable in number too.

12 Shining Force III

Shining Force III does its classic predecessors justice and provides a fantastic strategy rpg experience. The plot is strong and constantly moving forward, the graphics clear, crisp, and expressive, and the strategy elements deep, and very well thought out. This is actually the 1st part of a 3 part series, the 2nd two parts were never released in English, but fortunately you do get some level of closure upon finishing so the game can be played and enjoyed for its own merits.

11 Tomb Raider

One of the 1st truly defining titles of the 3D generation, Tomb Raider astonished with its well realised environment, and clever interlocking puzzles. Presentation wise the game was also 1st rate, with excellent, moody music, and impressive (by 1996 standards) graphics. The control system was rigid (similar to Prince or Persia) but precise, and tension was ever present, with sudden attacks from bears or even dinosaurs a fairly regular occurrence. The game's impact was immense at the time.

10 Powerslave/Exhumed

This had to be the best FPS released during the early post Doom period, but reviewers of the time proved their collective stupidity and general susceptibility to hype by overlooking it completely in favour of Duke Nukem and Quake. Not only is Powerslave just as impressive graphically, and just as smooth and action packed, it takes a much more adventure inspired direction, with multiple endings and a plethora of new moves given to you as you progress through the game. Each of the new moves you acquire allow you to explore previously unreachable areas of the levels (a la Metroid), sometimes out of necessity, sometimes to find hidden permanent health upgrades. The longevity is also pretty huge as even after completion there are secrets to unlock by searching out all the "team dolls"

9 Radiant Silvergun

Treasure showed all the old stalwarts how to make a shmup with this extremely imaginative take on the genre. Radiant Silvergun is packed full of ideas, you're given 7 weapons immediately from the start, and the levels are designed in a way which means that there's usually a right weapon to use for each situation, each weapon also gains experience and levels up in a similar way to what you'd see in an RPG, and many of the boss fights are very cleverly and carefully designed. Radiant Silvergun really is a refreshing take on the genre for anyone under the impression that they've seen it all done before.

8 Resident Evil

Its unfortunate that Resident Evil didn't come out a little earlier on Saturn than it did, it was one of the games which really pushed the PS1 to the forefront in public popularity, representing the grown up image that Sony wanted to convey extremely well. With a mixture of fiendish puzzles, creepy horror themes, and masses of tension the like of which had never been seen before, Resident Evil carved its place in videogame history. Capcom really must be commended for a very good job here, the port is graphically very close to the PS1 version, and there's even a few extras, such as a battle mode and new outfits.

7 Street Fighter Alpha 3

This is the Street Fighter game for fans of the series, Capcom built on top of the sumptuous, detailed graphics of the previous Alpha's and added a huge wealth of options, playable characters, and gameplay modes, effectively following a "everything but the kitchen sink" ethos. They also showed all the experience and knowledge of the Saturn they had stockpiled over the years as this is virtually arcade perfect (no exaggeration), even surpassing the Dreamcast version!

6 Nights

The simplest ideas are often the most elegant, and Nights is no exception. The gameplay has you flying through hoops in succession whilst collecting orbs, aiming for fast times and high rankings. Whilst simple, that doesn't stop Nights from being a very unique, and fun game, with a lot of originality, and Sega really excelled themselves with the presentation here, with the endearing theme, and music creating a very memorable gaming experience.

5 Panzer Dragoon Zwei

For anyone unfamiliar with the main branch Panzer Dragoon games, they're rail shooters reminiscent to (though arriving before) Star Fox 64. You control a dragon which moves forwards automatically whilst you aim and shoot enemies, or target lock multiple foes and release a barrage of homing lasers. This sequel to the original Panzer Dragoon (a Saturn launch title) was an absolutely astronomical improvement. All areas of the game have been worked on, happily controls and movement are now far more responsive and less scripted than the original, and analogue support is now available (an especially important feature for this style of game). The depth and longevity have also had a huge boost due to the implementation of a couple of interesting new features, in Zwei, your dragon actually changes and evolves differently as the game goes on based on your performance, and alternate routes can also be taken. Sega did an extremely good job with the graphics here as well, with some very impressive effects.

4 Sega Rally

One of the first racing games to use different course surfaces with different properties, Sega Rally really was one of the big pioneers of the genre. The Saturn port of Sega Rally was a resounding success, much, much better than the previous port of Daytona had been, with much more solid, detailed graphics, a better draw distance, and some good extra modes (such as the 2-player split screen). Sega Rally may sound fairly short at only four tracks, but the game takes a lot of practice and mastery to complete.

2 Virtua Fighter 2

Possibly the biggest footnote in what is pretty much the deepest fighting series out there. The gameplay and balance between each fighter here was clearly handled with careful thought, and the graphics and animation set the bar for what was expected of 3D graphics for both the arcades and the home. Longevity is huge as each character has a large selection of moves and unique style to work with.

1 Panzer Dragoon Saga

Team Andromeda did a complete turnaround for the third Panzer Dragoon game, deciding to create a JRPG of epic scale instead of the usual rail shooter mechanics of the previous games. Detractors may well have thought this would be a mistake, being that the team had never worked on an RPG previously, but Panzer Dragoon Saga ended up a tour de force even on par with the PS1's Final Fantasy games. You get a real feeling of epic scope as you make your way through the barren landscapes of the game, the music is fantastic and helps add to the atmosphere, and the whole world is very ambitious and well realised. Unlike many of the JRPG's of the time, PDS had fully 3D worlds to explore, there's also full voice acting for the characters, along with the copious amounts of FMV seen in the highest profile RPG's of the era. Saga's Battle system also deserves special mention as its far more intriguing, and interesting than the usual battle systems of the era, in Saga you still have freedom of movement during battles, and danger level is based on your positioning, with a radar indicating the danger levels of each quadrant, this system keeps you on your feet at all times, and does a better job at holding interest. Panzer Dragoon Saga really is one of the best of the 32-bit RPG's, which truly makes it a shame that many will never play it due to the high price it goes for these days.

Video Arcade @ Minnesota State Fair (2012-08-30 16:36)

My overview of the dieing arcade scene at Minnesota State Fair at this magnitude . The United States arcade scene is dead! I felt I was in the Smithsonian Museum a little bit.

SHMUPs XI - Bought DoDonPachi and Soukyugurentai (2012-09-01 16:23)

I bought an Action Replay for Sega Saturn to play DoDonPachi and Soukyugurentai, DoDonPachi was #1 and Soukyugurentai was #20. On SHMUPs.com they both got 10/10. I also get to play Battle Garrega and Radiant Silvergun.

My Guild Wars 2 (free MMORPG) impressions (2012-09-03 20:40)

It's awesome to say the least. A very good and different take on mmorpgs, it's a lot more similar to WoW now that the original was. One of the most drastic changes were the skills. In the first GW skills were kinda like cards, and you could choose a couple to play with, and since there were thousands of them, and you could also play with two professions, the possible combinations were mind blowing. Apparently that was hard to balance so they simplified it a bit. In GW2 most of your skills are determined by the weapons you are holding in your hands, so if you have two-handed sword equipped, you will automatically have all 5 skills for that weapon type. It's kinda underwhelming when compared to the original GW, these 5 are good and all, but in the long run it's gonna get pretty repetitive if you only stick to one weapon type. I like to think of it as being like Devil May Cry or God of War for example, you only had a small amount of possible moves but each of them served a purpose for a specific spot or time to be used. But in the end, I managed to unlock every single weapon skill in my first day of playing the game (there are only about 20 or so), so it's kinda depressing to know that after I invest a ton of hours in the game I won't ever have the opportunity to get a new attacking skill. The other 5 skills you can equip are a dedicated healing, 3 utility support skills and one elite skill, but these are also only few to choose from. Oh well at least the PvP will be more manageable.

I'm a Charr Warrior level 20 at this point, fully completed the first 2 maps. There's a bunch of stuff to do, and there are dynamic events at almost every step of the way. I really like one of the cool new aspects they added, vista points. It's basically like the observation towers from Assassins Creed, you can find them all over the place, on top of houses, mountains and all over the environments, but getting to them actually takes some platforming. Yes that's right, platforming in an mmo, you need to scan around for possible ways to ascend, start jumping on rocks to make it across the gap and reach a destroyed wall from which you can then jump to another possible platform. Stuff like this was usually considered exploiting, but they really did carefully design these environments.

There's a ton of players present, especially in the starting areas, and it's really cool how everyone can fluidly work together without the need to invite anyone to the group, because everything is shared people are quick to jump in and help you with whatever you are doing, instead of just avoiding you like in other mmos. Also I have to say it's

pretty hard, once you go out solo you quickly get overwhelmed and die, so it's always a good idea to play in groups. There's a ton of really cool new features, like the fact that you can be in more than one guild at the same time, and that you can invite a friend from another server to join you. The personal story is also great, you can make choices in how you deal and approach stuff and everything is recorded in your diary. There's also a lot of npcs that talk to each other and interact with others, so everything really does feel alive and organic, I have already witnessed quite a few hilarious dialogues taking place around me.

The most amazing addition to the game has to be the new pvp system. World VS World is simply crazy in scale, there are 4 huge battlegrounds taking place on a separate map, each of those with their towns, mines, resources, caravans, quests and stuff like that, so you can basically only ever play WvW and level up to maximum level, you don't even need to engage in combat with other players, you can help the fight by doing many other things, but I haven't explored all of that just yet. Back to playing I go!

EDIT: Oh yeah I forgot to mention that I'm actually playing with my wireless PS3 controller. I managed to set it up quite nicely, but it does take some concentration to get used to where the skills actually are. It wasn't easy to do since there are about 10 skills to use, plus jumping, evading, looting, switching targets, switching weapons, both mouse buttons so I can turn around and more. So yeah all of the buttons on the controller could have easily been used on just skills, but I set it up so that my healing and utility skills are activated with L2 + regular combat skill buttons. It's playable with my warrior, but I don't think other professions will be especially the elementalists since they have more skills to use because of elemental attunements. I just wish I could make the dpad work for extra skills somehow, but they become deactivated when my analog is used, because they are technically both used for movement so one negates the other, maybe if I used some different software... maybe I could try using voice commands, yeah that would actually be pretty cool.

Why the wii U won't be first place in sales. (2012-09-05 03:24)

The wii u has a weird controller. Some games use the wii u controller and the wi remote . The wii u controller and wii u nunchuk combo to play with. The controller is less impressive than an iPhone. The Wii U controller is single touch unlike iPad's multi touch.. The 3rd party support is half-hearted, Gamecube had the Resident Evil 4, but very little besides. Non-Nintendo games don't sell well. The Wii is sold through simplicity. There isn't a big graphics leap over last generation. It only has a 32 GB hard drive. Nintendo is still relying on flash cards and SD cards, and that isn't enough for an avid downloader. There is no online strategy so eShop and Miiverse will be a mess.. The Wii U offers less than the competition. The Wii U cannot play mp3, aac, m4a, H263, H264 or a bluray player. unlike ps3 and xbox 360. Wii was looking for simplicity, yet the Wii U controller is aimed at complexity. The 3DS had a \$80 price cut so Nintendo has lost their mojo since Gamecube. Unless Nintendo can convince 3rd parties to develop for it, Nintendo will always be a company for tots and grandmas.

All PS4 and Xbox 720 have to do is supply DirectX 11 on Bluray with thier current controllers and they sell better than Wii U. Maybe it is time for six buttons like Sega Genesis?

RARE SHMUPs I own (2012-09-09 00:16)

Eliminate Down 4
Muchi Muchi Pork! & Pink Sweets: Ibara Sore Kara 13
Battle Garegga 20
Langrisser II 20
Espgaluda 21

Espgaluda II Black Label 23
 Touhou Koumakyou: Embodiment of Scarlet Devil 24
 DoDonPachi Resurrection 26
 Touhou Seirensen: Undefined Fantastic Object 28
 Akai Katana 33
 DoDonPachi Dai-Ou-Jou 35
 Mushihimesama Futari Ver 1.5 37
 Ibara 38
 Touhou Fuujinroku: Mountain of Faith 43
 DoDonPachi (saturn) 45
 Mushihimesama 45
 Border Down 48
 Treasure Hunter G 52 users
 Touhou Youyoumu: Perfect Cherry Blossom 57
 MUSHA 91

Why doesn't anyone want Mushihimesama, DoDonPachi, Akai Katana, Ibara, etc. Why am I the only one with these titles. I thought these SHMUPs were fun. That's what is wrong with videogames. Rising Star Games and Atari didn't release them in the United States for PS2 and Xbox 360!

They released Contra in the US, and that series has the same difficulty as all of these SHMUPs. They sell more in an Anthology.

I guess I am still wondering why the hell nobody released Radiant Silvergun or Battle Garegga in the States! Treasure released RS for xbox 360, but only 52 wanted it. Are X360 people stupid or wimpy?

They didn't release Border Down for American Sega Dreamcast.

Wii U needs better than radeon HD 4800 (2012-09-11 00:15)

I believe that Wii U is better off with a Radeon HD 6870 GPU, because it needs 2 GB of GDDR5. I'm getting a Radeon HD 6970 for my birthday and the Wii U needs to keep up. This can do 75 frames per second instead of 36 frames per second on the HD 4800. The Radeon HD 6970 is a little worse than my Radeon HD 5970 Black Edition in terms of frames per second, but it has better power consumption. My Radeon HD 5970 cannot do OpenGL 4.2 for example. Radeon HD 5970 can only do OpenGL 3.2, but it does do DirectX 11. Radeon HD 6970 can do DirectX 11.1 however for even prettier graphics. Wii U is supposed to last 6 more years

I wouldn't mind the Wii U going up \$70, because of the Radeon HD 6870 inside. \$60 games is normal these days.

Top 5 Final Fantasy games (2012-09-11 00:18)

5. Final Fantasy VIII

Final Fantasy VIII seems to get a lot of hate for some reason and I'm not sure why. It's not my favorite or it wouldn't be number 5 but it's not the worse, not anywhere close to Final Fantasy IX. Final Fantasy VIII has some pretty cool characters in it like Squall, Seifer and Irvine and the story is very enjoyable. The Final Fantasy series takes pride in itself that it has a lot of fun side quests and this game has the best one of all, a card game called Tetra Master.

4. Final Fantasy X

Final Fantasy X reminds me of one of my favorite television shows, Buffy the Vampire Slayer. Simply because their main characters are horrible, but the supporting cast is awesome. Tidus might be the most clueless moron ever in a

video game. But how can you not like a game with joyful Wakka, not so joyful Lulu, the silent warrior Kimahri and Auron, possibly the baddest character ever in a video game. Like Final Fantasy VIII, Final Fantasy X also has a really awesome side game called Blitzball. .

3. Final Fantasy VII

There is a lot to like about Final Fantasy VII. First it has sentimental value because it was the first RPG I played on Playstation and the graphics were amazing at the time. FF VII also featured a hero with a huge sword, Sephiroth, the coolest villain ever, and Tifa. Finally! A female RPG character that isn't just a magic user!

2. Final Fantasy III

For a very long, long time Final Fantasy III wasn't just my favorite FF game but was my favorite game of all time. FF III had more characters than you'll normally have in a RPG and all of them got considerable amount of time to learn about the characters. The story was probably better than all the stories from FF VII to FF X.

1. Final Fantasy XII

It's simple really. Final Fantasy XII has the best story, the best graphics and the best fighting system. I was even skeptical about the fighting system when I first heard about it but I ended up loving it.

Bob Woodward's devastating account of Obama's failed leadership (2012-09-12 00:10)

From The Washington Examiner:

Arrogant, aloof, and unprepared is how Bob Woodward portrays President Obama in his new book *The Price of Politics*, set to be released next week.

The book recounts Obama's troubled relationship with Congress, from his inauguration through last summer's failed debt-limit negotiations, with Woodward concluding, "It is a fact that President Obama was handed a miserable, faltering economy and faced a recalcitrant Republican opposition. But presidents work their will — or should work their will — on important matters of national business. . . . Obama has not."

PS4 tech specs September edition (2012-09-12 00:13)

Inside sources have leaked information to the press claiming that the CPU in the next-generation PS4 (codenamed Orbis) is an AMD Llano A8-3850. The chip will supposedly be paired with an AMD Radeon 7670 GPU with 1GB of integrated VRAM. With all due respect to IGN, this is the sort of report that deserves a considerably better review than they apparently gave it. Sony may well be working with that level of AMD hardware, but that's not the same as shipping said configurations.

Let's start with the APU. The A8-3850 was one of AMD's earliest Llano chips; a 100W 2.9GHz quad-core with an integrated Radeon 6550D. It didn't ship in high quantity – AMD chose to emphasize shipping out mobile Llano's rather than their desktop counterparts. Llano is a much stronger mobile chip than it is on the desktop; AMD has been unable to scale the chip to higher clock speeds (think 3GHz+) without dramatically increasing its TDP.

Llano's Achilles heel is the interconnect between its CPU and GPU; the communication channel is very similar to an old-school motherboard northbridge implementation. It's easy for the CPU to transfer data to the GPU but much more difficult for the GPU to do the same – which means it's also much harder for AMD to take advantage of Llano's array of GPU cores as a general-purpose compute array. Bandwidth is quite limited; Llano's GPU is critically dependent on main memory bandwidth to function well.

Now, let's talk about the Radeon 7670. It's a rebranded HD 6760, based on the budget Turks 40nm GPU. According to IGN, "When the APU is paired with the HD 7670, however, Sony will be able to utilize an asymmetrical CrossFire configuration to share the load of realtime graphics processing." That's technically true, but the benefits of Hybrid Crossfire are limited to DX10/11 games (it's unclear how AMD would scale the benefit to OpenGL and older DX9 titles are often slower than they'd be with just the dGPU.) Scaling benefits are also erratic and vary significantly from game to game.

The reason we don't believe reports that Sony would adopt the Llano+6760 is that AMD has **much** better hardware either already shipping or coming in the very near future – certainly well before the PS4's launch date. Llano may have done a great job getting AMD's foot in the door, but the chip is based on AMD's four-year-old Shanghai CPU. AMD has no plans to continue building Llano at nodes below 32nm, and console manufacturers always plan to scale a CPU through multiple process nodes. The current PS3 is produced on a 45nm/40nm process, having begun life at 90nm. If Llano's GPU was good, Trinity's is expected to be significantly better. More importantly, its GPU is based on Cayman, which means it's a substantial improvement over the HD 5000-era part baked into Llano. Similarly, AMD might well target a budget price point for whatever GPU the PS4 eventually uses, but it probably won't be derived from a graphics architecture that'll already be three years old by the time the system ships.

Getting Photoshop CS4 tomorrow (2012-09-12 19:20)

I've been using Paint Shop Pro since PSP 7.0 I think back in 2003. I have used Paint shop Pro X3 for over two years, yet now I have Paint Shop Pro X4. I know I haven't been politically correct and taken the cheap way out on Flickr, photobucket image enhancement. I had to dumb down to using Photobrush for image enhancement, because I had 56K seven years ago.

picture enhanced in PSP X4. still not enough for flickr crowds!

I believe I'll also have Photoshop CS4 tomorrow besides my Dreamweaver CS6 and Paint Shop Pro X4 (above). I swear that flickr traffic only looks for the Adobe Photoshop in the EXIF tag, yet Paintshop Ppro X3/X4 looks just as good on

most JPEGs. That's why I've got minus 100 views on my flickr JPEGs.

Top 5 Final Fantasy games (2012-09-17 03:18)

5. Final Fantasy VIII

Final Fantasy VIII seems to get a lot of hate for some reason and I'm not sure why. It's not my favorite or it wouldn't be number 5 but it's not the worse, not anywhere close to Final Fantasy IX. Final Fantasy VIII has some pretty cool characters in it like Squall, Seifer and Irvine and the story is very enjoyable. The Final Fantasy series takes pride in itself that it has a lot of fun side quests and this game has the best one of all, a card game called Tetra Master.

4. Final Fantasy X

Final Fantasy X reminds me of one of my favorite television shows, Buffy the Vampire Slayer. Simply because their main characters are horrible, but the supporting cast is awesome. Tidus might be the most clueless moron ever in a video game. But how can you not like a game with joyful Wakka, not so joyful Lulu, the silent warrior Kimahri and Auron, possibly the baddest character ever in a video game. Like Final Fantasy VIII, Final Fantasy X also has a really awesome side game called Blitzball. .

3. Final Fantasy VII

There is a lot to like about Final Fantasy VII. First it has sentimental value because it was the first RPG I played on Playstation and the graphics were amazing at the time. FF VII also featured a hero with a huge sword, Sephiroth, the coolest villain ever, and Tifa. Finally! A female RPG character that isn't just a magic user!

2. Final Fantasy III

For a very long, long time Final Fantasy III wasn't just my favorite FF game but was my favorite game of all time. FF III had more characters than you'll normally have in a RPG and all of them got considerable amount of time to learn about the characters. The story was probably better than all the stories from FF VII to FF X.

1. Final Fantasy XII

It's simple really. Final Fantasy XII has the best story, the best graphics and the best fighting system. I was even skeptical about the fighting system when I first heard about it but I ended up loving it.

#20 - #11 Comic Books (2012-09-17 06:59)

20 (tie). "Days of Future Past" by Chris Claremont, John Byrne and Terry Austin (X-Men #141 and Uncanny X-Men #142)

Days of Future Past was a major X-Men storyline, as it introduced many key figures and plotlines that would reoccur many times over the next 30 years (and counting).

The main concept of the book is that a group of X-Men in the future, a dark future where most mutants have been hunted down and killed by government-mandated genocide (using giant robots called Sentinels), decide to try to change their present by sending one of them back in time to stop the problem before it began.

The way they do this is by sending the mind of Katherine Pryde into the mind of herself as a teenager, Kitty Pryde of the X-Men.

You see, the Brotherhood of Evil Mutants are destined to kill Senator Robert Kelly, an anti-mutant Senator who wants to run for President. If they succeed, this will lead to the backlash that made their timeline occur. So the idea is to avoid that by saving Kelly's life.

The rest of the comic mixes in the present-time X-Men trying to stop the Brotherhood along with the future X-Men facing off against the Sentinels.

The story introduced the dark future timeline, which became a major trope for the X-Books (alternate timelines), plus introduced major characters like Rachel, the telepath who sends Katherine's mind to the past, and a few new evil mutants who kept popping up over and over again over the years (Avalanche, Destiny and Pyro).

This was also notable in that it was the last storyline that the classic X-Men team of Chris Claremont and John Byrne did on the book (Byrne left the book after one more issue, a classic Christmas tale).

20 (tie). "E is for Extinction" by Grant Morrison, Frank Quitely and Tim Townsend (New X-Men #114-116)

19. "The Galactus Trilogy" by Stan Lee, Jack Kirby and Joe Sinnott (Fantastic Four Vol. 1 #48-50)

18. "Civil War" by Mark Millar, Steve McNiven and Dexter Vines (Civil War #1-7)

17. "Under Siege" by Roger Stern, John Buscema and Tom Palmer (Avengers #270-277)

16. "The Sinestro Corps War" by Geoff Johns, Dave Gibbons, Peter Tomasi, Ivan Reis, Ethan Van Sciver, Patrick Gleason plus a whole lot of other pencilers and inkers (Green Lantern Sinestro Corps Special #1, Green Lantern Vol. 4 #21-25, Green Lantern Corps #14-19)

15. "V for Vendetta" by Alan Moore and David Lloyd (After beginning serialization in Warrior, V for Vendetta #1-10)

At the heart of V for Vendetta is an engaging and difficult dilemma – if you HAD to choose, what would you prefer? Fascism or anarchy?

In the former, yeah, you'd be ruled by essentially dictators, but odds are that you personally wouldn't be directly affected.

In the latter, yeah, you'd be free, but there would be no protection from chaos.

It's a beautiful dilemma, and Alan Moore milks it for all that it is worth in this alternate reality where a "terrorist" named V (who wears a Guy Fawkes mask) tries to bring down the government, hopefully with the help of a young woman named Evie.

Moore and his brilliant artistic counterpart, David Lloyd, create a lush, dark and vibrant world that is too scary to want to live there, but too interesting not to want to read more about.

14. "Kraven's Last Hunt" by J.M. DeMatteis, Mike Zeck and Bob McLeod (Amazing Spider-Man #293-294, Spectacular Spider-Man #131-132 and Web of Spider-Man #31-32)

Kraven's Last Hunt (originally known as "Fearful Symmetry") takes a novel approach to the Spider-Man villain, Kraven the Hunter. Kraven the Hunter originally debuted under an interesting motive for being a super-villain – he was a famous big game hunter and hunting Spider-Man was a challenge for him. That was about it.

The only thing was that he never really succeeded in BEATING Spider-Man, and over the years, that has depressed him to the point of near-mania.

And that is where we open Fearful Symmetry, with a crazed Kraven the Hunter lamenting his failures and vowing to finally succeed – and he does – he not only defeats Spider-Man, but he buries him in a grave!!!

Taking on Spider-Man's costume, Kraven goes on to try to show how he is a better Spider-Man than Spider-Man ever was.

Pretty rough stuff, huh?

J. M. DeMatteis crafted a wonderful psychologically taut thriller here, with great art by Mike Zeck and Bob McLeod.

This story, which serialized throughout all three of the Spider-Man books in late 1987, was exceptionally dark for what was a typical Spider-Man (heck, a typical SUPERHERO) story at the time – and it really made it stand out, but even in modern times the story holds up extremely well.

13. "The Judas Contract " by Marv Wolfman, George Perez, Dick Giordano and Mike DeCarlo (Tales of the New Teen Titans #42-44, Tales of the New Teen Titans Annual #3)

12. "The Age of Apocalypse" by Scott Lobdell, Mark Waid, Fabian Nicieza, Andy Kubert, Joe Madureira, Steve Epting, Roger Cruz and a pile of other artists and writers (X-Men: Alpha #1, Amazing X-Men #1-4, Astonishing X-Men #1-4, X-Men: Omega #1 plus a bunch of tie-ins)

11. "The Great Darkness Saga" by Paul Levitz, Keith Giffen and Larry Mahlstedt (Legion of Super-Heroes #290-294)

Probably the most notable aspect of the Great Darkness Saga is just how well Paul Levitz and Keith Giffen developed the drama of the storyline. It was very much a slow burn as things slowly got progressively worse until, well, all hell broke loose at the end of the story.

Larry Mahlstedt was Giffen's inker at the time, and the duo produced some strong, dynamic and characterization-filled artwork.

After some small references in the issues before, the storyline began proper in Legion of Super-Heroes #290, as some mysterious powerful "dark" creatures keep popping up around the world capturing items of power, with the Legion trying (to no avail) to stop them at each opportunity.

In the next issue, the situation continues to deteriorate, and the mystery of WHO these "dark warriors" are becomes a bigger issue, as it APPEARS as though the dark creatures are actually powerful beings from the past – beings that have been long dead for years (centuries in some cases).

The Legion are getting their asses handed to them repeatedly, and as #291 ends, things look pretty damn bleak...and that's before they reveal that Darkseid is the big bad guy!!!

The impact of that reveal was a lot bigger back when Darkseid was not such a popular villain for people to use.

And that, of course, leads into a dramatic last issue that has all the drama and action you would expect from the previous issues. It is impressive to see a story slowly build and have the conclusion be truly worth the slow burn.

Levitz and Giffen both come off as wonderful storytellers in this saga.

Top 10 comic books (2012-09-18 06:26)

10. "Maus: A Survivor's Tale" by Art Spiegelman (For simplicity's sake, let's just say Maus: Book 1 and Book 2)

The genius of Art Spiegelman's masterpiece, *Maus*, is that it is not just a brilliant re-telling of one man's tale of survival during World War II and the Holocaust.

If it were just that, then it would still belong on this list, but it isn't. It's also the tale of a man dealing with his father. It's also the tale of how stories are told. And perhaps most fascinating to me is that it also eventually becomes about a man dealing with the fact that his personal story about his father's survival of the Holocaust has become a commercial and critical success. How does one reconcile oneself with something like that? Spiegelman addresses it beautifully in this story.

But at the heart of the comic, Spiegelman is telling us how his father, Vladek Spiegelman, survived the war.

And Vladek's tale is absolutely fascinating, made even more so by Art's deft storytelling skills, as he prevents the book from ever getting monotonous, while at the same time being quite detailed in the history of the tale. It reminds me a lot of the work Eddie Campbell did on From Hell.

It took Spiegelman years to get this story finished, but it was well worth the wait, as it was an exceptional piece of work.

9. "Kingdom Come" by Mark Waid and Alex Ross (Kingdom Come #1-4) –

Kingdom Come is an interesting reflection on the superhero trends of the 1990s.

It is set in the future, a world where "grim and gritty" superheroes have basically taken control of the DC Universe, leading to vast amounts of chaos.

Superman is pulled out of retirement by a tragedy which left it quite clear that something "had" to be done about the superhero problem. However, unbenown to Superman, other forces were coming together to deal with heroes THEIR way.

Superman's return led to a resurgence of "traditional" superheroics, and Superman gathers his old friends in a revamped Justice League. Superman gains a number of converts to his way of thinking, but just as many "heroes" turn away from Superman's view of the world, leading to a number of conflicts and Superman effectively imposing his will on these people, something that turns Batman from Superman's crusade.

As the powder keg Superman has been building explodes, it's hero versus hero versus villain while a worried government wonders if they should just try to rid themselves of superheroes once and for all.

It's a tense script by Mark waid, and Alex Ross' realistic painted artwork brings across the humanity of the story being told. In addition, Ross clearly has a blast revamping the looks for the older heroes and designing costumes for the new characters.

To this day DC is mining this story for ideas!

8. "Season of Mists" by Neil Gaiman, Kelley Jones, Mike Dringenberg, Malcolm Jones III, Matt Wagner, Dick Giordano, George Pratt, and P. Craig Russell (Sandman #21-28)

Season of Mists was a landmark arc during Neil Gaiman's Sandman tenure, as this was the story that introduced the Endless (Dream and Death's other siblings) as well as created the set-up for Mike Carey's Lucifer series.

In the story, Dream is shamed into attempting to rescue his former love, who he, in a fit of rage, banished to hell thousands of years ago. He steels himself for a battle with Lucifer, who is Dream knows is not pleased with him.

Dream could not expect, however, how Lucifer decided to deal with him – when Dream shows up to fight with Lucifer he learns that Lucifer has closed Hell and he gives Dream the key to hell.

What follows next is an entertaining exploration of what the universe would be like without Hell, along with a brilliant piece of mythology work as Gaiman shows all the various other deities (like the Norse Gods and the Egyptian Gods, etc.) showing up to bargain with Dream for the rights to such prime interdimensional real estate.

Gaiman has had great success over the years working with various mythologies and their deities, and that fascination really began here.

The artwork is strong, with Kelley Jones really doing a wonderful job with the moodiness of the tale.

7. “Crisis on Infinite Earths” by Marv Wolfman, George Perez, Dick Giordano and Jerry Ordway (Crisis on Infinite Earths #1-12, plus a bunch of tie-ins)

Crisis on Infinite Earths was both a love letter to the past of DC Universe while also the formation of a “new” DC Universe.

Marv Wolfman and George Perez put the DC Universe into a position where worlds were dying and realities were shattering. This allowed the pair to use a cast of literally thousands as they explored the vast realms of DC’s comic history in a sprawling epic with more than one “Ultimate Battle Between Good and Evil.”

The devices pushing this plot forward are the Monitor and the Anti-Monitor, one a benevolent being who was studying the DC Universe – the other a madman who wants to destroy the Multiverse, the backbone of DC's multiple Earths set-up (which allowed DC to separate their Golden Age creation from their Silver Age counterparts, but also allowed them to integrate comics they bought from other publishers without having to splice them together with their existing heroes).

In a battle this epic, deaths were bound to happen, and this story was SO big that two very big names saw their end – Superman's cousin, Supergirl and Barry Allen, the Silver Age Flash.

Initially, other titles were hesitant to tie into Crisis, but by the time the series ended, it was such a big hit that books were falling over themselves to tie into the event!

Wolfman and Perez ended the series with more than one magnificently diverse epic slugfests, until the dust settled and the DC Universe was never the same.

What a way to spend a Golden Anniversary!!

6. "All Star Superman" by Grant Morrison and Frank Quitely (All Star Superman #1-12)

All Star Superman is both a reimagination of Superman as well as a bit of a farewell to the character. The story is basically about the death of Superman, as his death is foretold in the first issue and the comic depicts the last year in the life of Superman.

That year allows Morrison and Quitely to come up with brilliant new approaches to classic Superman plots.

Their “Silver Age ideas with modern sensibilities” approach works extremely well, particularly with Quitely’s ability to make pretty much anything dynamic.

Possibly one of the coolest aspects of All Star Superman is that it is not, in the least bit, cynical. It’s quite a feat to see a re-envisioning of Superman that does NOT involve some sort of post-ironic cynical approach to the character.

In addition, the story was told with a series of (mostly) one-off issues, so each issue was like its own little epic, they just combine to tell one long story of Superman’s last year of life.

Morrison’s take on Superman and his supporting cast is innovative while completely familiar, and Quitely, well, Quitely just goes out of his mind with some of the layouts and dynamism in this series. Really top notch stuff.

It’s a blast to read, and I can only imagine how well it reads collected in trades!

5. “Dark Knight Returns” by Frank Miller and Klaus Janson (Batman: The Dark Knight #1-4)

Dark Knight Returns is one of the most influential Batman comics, well, ever, really. In his four-issue series set 10 years after Bruce Wayne retired as Batman, Frank Miller basically established the way Batman would be presented in comics for the next...well...23 years and counting!

The comic is literally about the return of the Dark Knight, as Bruce Wayne realizes that his city needs Batman again, so he, well, returns.

Miller plays with the concept (not originated by Miller but certainly cemented by Miller) that perhaps Batman's existence draws OUT the crazies in an action-reaction deal.

As soon as Batman returns, so, too, does Two-Face and the Joker.

The other major characters in the story (besides Alfred) are Carrie Kelly, the teenaged girl who becomes the new Robin and Superman, whose conflict with Batman makes up the finale to the series.

Miller's art is in strong form in the series, especially the action sequences, which are dramatic as all hell.

Batman has three (one is a two-parter) extremely memorable fights in this series.

The first is against the leader of the Mutants, the screwed up gang of thugs who are terrorizing Gotham (in his first night back, Batman saves Carrie Kelly from a pair of them, leading to her wanting to become Robin), where Batman tries to compete like he was still young, but soon figures out that winning is the best way to handle things.

The second is a chilling conflict with the Joker, who figures out the best way (in his mind) to "beat" Batman – it's quite twisted.

The third is the aforementioned battle between Superman and Batman, where we see perhaps the debut of the whole "if Batman had enough prep time, he could beat anyone" mode of handling Batman.

So yeah, Dark Knight Returns – major comic book work.

4. "Year One" by Frank Miller and David Mazzucchelli (Batman #404-407)

Whatever aspects of the Batman character weren't already re-defined by Frank Miller's Dark Knight Returns were done so with this landmark new origin for Batman, courtesy of writer Frank Miller and artist David Mazzucchelli.

The story tells the tale of Bruce Wayne and James Gordon, and how one man became Batman and the other became the symbol of honest cops in Gotham City.

That this story was the basis for the blockbuster film, *Batman Begins*, is of no surprise, since Miller writes the story in a totally cinematic style, and Mazzucchelli's brilliant artwork certainly has a cinematic style to it, as well.

Perhaps the most impressive aspect of the comic is just how strong of a character Jim Gordon is in it. He truly works as the co-lead of the story. While writers certainly had done solo Gordon stories before this storyline, never had he gotten the attention Miller gave him, and as a result, Gordon HAS had the same attention since.

Richmond Lewis' colors should get some attention – she does a marvelous job setting the mood. Very evocative washes.

Add it all together and you have an engaging and entertaining new origin for Batman as we see him go from green vigilante to a trusted friend of the Gotham City police (as the police also go from being totally corrupt to only being significantly corrupt – a major step up!).

3. "Born Again" by Frank Miller and David Mazzucchelli (Daredevil #227-233)

Born Again drastically re-shaped Daredevil as a character, in Frank Miller's return to the book that made him famous. This time, Miller was working with artist David Mazzucchelli, who was already doing very impressive work on the series with writer Denny O'Neil. However, Mazzucchelli was still growing as an artist, and in many ways, Born Again was his "coming out" party, as he at the very least equaled, and more likely SURPASSED the incredible artwork that Miller had done himself when drawing Daredevil years earlier.

The story is about what happens when Matt Murdock's former secretary (and former love of his life), Karen Page, who had left the book to become an actress, was now a drug-addicted porn star. Desperate for drugs, Page sells Matt's secret identity. Eventually this information finds its way to Wilson Fisk, the Kingpin of Crime, who uses it to systematically destroy Matt's life (getting him disbarred, freezing his assets, etc.).

Then, in one of the best scenes you'll see, Kingpin also blows up Matt's brownstone – and then, Matt realizes, all of the terrible things that had been happening to him, they weren't just bad luck, they were because of the Kingpin!

That realization, however awesome, is not enough to make Matt "born again," as he still has to fall to the gutters before he can rise above it all.

The scene is filled with so many great scenes that I devoted, like, a month, to cool moments from it.

But here's a quick sampling...

1. Kingpin thinks he has Matt killed...but "there is no corpse.

"There is no corpse.

2. Kingpin realizes then that Matt may be more dangerous than ever, as after all..."A man without hope...is a man without fear."

3. Ben Urich knows something is up and is brutalized into cowering away from his responsibilities, so seeing this seemingly meek man grow the courage...it's brilliant (and Mazzucchelli and Richmond Lewis, who also colored this series, do such an amazing job on Urich's struggles).

4. Miller introduces an interesting new character called Nuke, and becomes the first writer to extend the whole Super Soldier program into conspiracy theories...

5. This, of course, leads to Captain America getting involved, and he's handled awesomely...

6. Nuke's involvement helps bring Daredevil back (after Matt and Karen reunite, as Miller redeems Karen), and his return is, well, amazing – Mazzucchelli and Lewis do SUCH an amazing job on the return of Daredevil. A totally iconic shot of Daredevil in front of flames.

7. Miller, Mazzucchelli and Lewis depict the Avengers in such a way that evokes how Alan Moore, Stephen Bissette and John Totleben handled the Justice League in the pages of Swamp Thing – and it's the way you'd almost expect superheroes to be depicted in the "real" world.

8. And it all ends with a likely Bob Dylan reference, so how much better can you get?

2. "The Dark Phoenix Saga" by Chris Claremont, John Byrne and Terry Austin (X-Men #129-137)

The last few issues of the Dark Phoenix Saga, where Phoenix actually BECOMES Dark Phoenix, almost overshadow the importance of the issues that lead up to Phoenix turning evil.

To wit, those issues (which actually were a bit of a cause for celebration for the X-Men, as they were finally reunited after being split up for a year or so – real time – as Jean Grey and Professor X thought that the rest of the team had died after a battle with Magneto) introduced the following characters:

Kitty Pryde

Emma Frost

Dazzler

Sebastian Shaw

The Hellfire Club, in general

Think about that – Kitty Pryde and Emma Frost are two of the more memorable additions to the X-Men since Giant Size X-Men #1, and they BOTH debuted in this storyline!

Not to mention the fact that the lead-up contains the fight against the Hellfire Club where Wolverine is thought dead, only to turn up at the end of #132 vowing revenge, in a panel that you readers voted the #4 Most Iconic Panel in Marvel Comics History!

And then we get to the actual revelation of the Dark Phoenix (which also landed in the Top 20 Most Iconic Panels at #18).

John Byrne really does a marvelous job on the battle sequences involving Dark Phoenix as the X-Men do their best to take down their friend. They try their best in #135, but she quickly defeats them and flies off into outer space. Her traveling makes her yearn for sustenance, which she gets by entering and imploding a star, soaking in the energy of its destruction. She does not care that the destruction of the star also destroys the planet it orbits. A starship of the Shi'Ar Empire notices, though, and challenges Dark Phoenix.

She destroys the ship easily, but not before it gets off a message to the Shi'Ar Royal Throneworld, where the Empress of the Shi'Ar Empire, Lilandra (Professor X's current lover) springs into action.

Meanwhile, in #136, Dark Phoenix returns to Earth where her teammates and her love, Cyclops, await her with a device meant to shut down telepaths. She destroys it and once again takes care of her teammates with ease, but Cyclops manages to calm her down by appealing to her still human side. At this point, Professor X attacks, and he and Phoenix have a telepathic battle, where ultimately, due to the aid of whatever vestiges of Jean Grey remain in Dark Phoenix, he manages to shut Dark Phoenix's powers down.

The X-Men do not have a moment to rest, though, as they're instantly teleported to a Shi'Ar battleship orbiting Earth, where the Shi'Ar Imperial Guard and Empress Lilandra demand Jean Grey be delivered over to them for punishment for her actions as Dark Phoenix. Professor X utters a Shi'Ar ritual challenge, which Lilandra is duty-bound to accept. Therefore, in #137, the X-Men will fight the mighty Shi'Ar Imperial Guard for the fate of Jean Grey.

The next day, the teams meet on the Moon for their battle. The X-Men are heavily outnumbered and outclassed by the Guard, who are made up of the most powerful heroes of the Shi'Ar Empire. Although the X-Men fight valiantly, they are slowly picked off, one by one, until only Cyclops and Jean remain free. When Cyclops is taken out as well, Jean begins to panic and the limits Professor X placed on her begin to crumble – Dark Phoenix frees herself and wants revenge. The X-Men stand ready to battle Dark Phoenix, but Jean manages to take control long enough to intentionally trip a defense mechanism laser, killing herself so that Dark Phoenix can hurt no one else ever again. It's a terrible poignant moment, expressed beautifully by Claremont and Byrne.

That moment, by the way, was #17 on the panels countdown.

This storyline also provided THREE of the Top 30 Favorite Comic Book Battles when I did THAT countdown.

People sure do love the Dark Phoenix Saga.

1. "Watchmen" by Alan Moore and Dave Gibbons (Watchmen #1-12) –

To give you an idea of how much of a game changer Watchmen was, note that the PROOFS for the issues were passed around the DC offices – that's how much even the other DC employees were enthralled in the story that Alan Moore and Dave Gibbons were producing. Everyone knew that this comic was special, and now almost 25 years later, it remains a very special story.

A remarkable aspect of Watchmen is the fact that, past the fairly straightforward plot about an older superhero getting murdered, with his former teammates investigating his murder only to find out that it is all tied to a mysterious conspiracy, there is just so much detail and nuance.

You can examine a single scene and get something new out of the scene practically every time you read it.

And that's even counting all of the famous scenes that are awesome just on a straightforward reading of the book, like Ozymandias' famous "I did it 35 minutes ago" line or Rorschach's fight against the police (as I noted recently, Watchmen was clearly VERY influential on the work of Frank Miller – in fact, there's a very strong possibility that Miller's reading of Watchmen helped influence the ending of Dark Knight).

Dave Gibbons does not get enough credit for his amazing artwork in this story. There's a sequence set in the past when the heroes were still all pretty naive (Rorschach was not even using his scary voice as of yet), and Gibbons gives us, ALL IN THE BACKGROUND, a beautiful depiction of Doctor Manhattan flirting with the Silk Spectre, all while his wife is right next to him. As the panels go by, not one doesn't show some sort of interaction in the background of the panel – all of it is important to their characterizations, but none of it is central to the main story being delivered in those panels – so Gibbons basically was giving us two stories at once. The one Moore is telling with the speech balloons at the "front" of the panel, plus the one Gibbons is telling in the "back" of the panel through body language. Granted, as great as Gibbons is, Moore DOES work full script, so while I am praising Gibbons, I have to make sure I do give Moore credit for the details, as well.

All in all, there is a reason that this was one of Time magazine's Top 100 Novels of the 20th Century – it's a masterpiece of comic book fiction, both in story and art – and twenty plus years later, it is STILL influencing comic book writers.

Okay, folks, that's it!

Why the wii U won't be first place in sales. (2012-09-20 00:12)

The wii u has a weird controller. Some games use the wii u controller and the wi remote . The wii u controller and wii u nunchuk combo to play with. The controller is less impressive than an iPhone. The Wii U controller is single touch unlike iPad's multi touch.. The 3rd party support is half-hearted, Gamecube had the Resident Evil 4, but very little besides. Non-Nintendo games don't sell well. The Wii is sold through simplicity. There isn't a big graphics leap over last generation. It only has a 32 GB hard drive. Nintendo is still relying on flash cards and SD cards, and that isn't enough for an avid downloader. There is no online strategy so eShop and Miiverse will be a mess.. The Wii U offers less than the competition. The Wii U cannot play mp3, aac, m4a, H263, H264 or a bluray player. unlike ps3 and xbox 360. Wii was looking for simplicity, yet the Wii U controller is aimed at complexity. The 3DS had a \$80 price cut so Nintendo has lost their mojo since Gamecube. Unless Nintendo can convince 3rd parties to develop for it, Nintendo will always be a company for tots and grandmas.

All PS4 and Xbox 720 have to do is supply DirectX 11 on Bluray with thier current controllers and they sell better than Wii U. Maybe it is time for six buttons like Sega Genesis?

US needs new consoles sooner than later (2012-09-22 03:30)

US retail sales of video games have not been good at all this year, with monthly declines regularly in the double digits. In an NPD data preview note, Wedbush Securities analyst Michael Pachter said that September's results (to be published this Thursday) won't be much better and that the industry really needs new consoles from Microsoft and Sony to push sales into positive territory again. Even big software this holiday (Halo, Call of Duty, etc.) and the launch of the Wii U won't be enough to really reverse the damage done throughout the year. "We expect October - December to be relatively flat, and expect a return to negative territory again next year, at least until the launch of a next-generation console from Microsoft or Sony," Pachter said. He continued, "A new console cycle is likely to reverse the negative sales trends of the last several years, with next-generation consoles expected from each of the three manufacturers over the next 18 months. Nintendo will launch the Wii U on November 18, and, while neither Sony nor Microsoft has yet announced new hardware, we expect a PS4 no later than November 2013, and a next Xbox no later than March 2014." "Competition from social and mobile games hurt packaged goods sales over the last three years, but should serve to expand the market for console games over the long run, although it appears that the addressable market for handheld games will continue to erode. We expect the publishers to address the "problem" of free online multiplayer with evolving business models, adding increased opportunities to purchase virtual items, creating subscription-only serialized content, and adding premium subscription layers to the free offerings currently provided." Ultimately, Pachter sees the next-gen consoles selling very quickly even if they are only a "modest improvement" over the current generation. from the gamer fatigue we've seen over the last three years," he said.

Minnesota Zoo in 2012 (2012-09-22 15:24)

I didn't get to go to the this zoo in Appleton, MN for a whole decade, because Minnesota has road construction. Zoo recently had their dinosaur exhibit (saw it in 1994). I am like a lot of people wanting to see lions, tigers, lumas, cougars, white tiger. These exotic cats grow winter coats (drugs in foods).

Playstation 4 tech specs (2012-09-24 12:35)

Playstation 4 uses AMD chips based on the A8-3859 APU (accelerated processing unit) and Radeon HD 7670 GPU
GPU supports HDMI1.4a

Inside sources have leaked information to the press claiming that the CPU in the next-generation PS4 (codenamed Orbis) is an AMD Llano A8-3850. The chip will supposedly be paired with an AMD Radeon 7670 GPU with 1GB of integrated VRAM. With all due respect to IGN, this is the sort of report that deserves a considerably better review than they apparently gave it. Sony may well be working with that level of AMD hardware, but that's not the same as shipping said configurations.

Let's start with the APU. The A8-3850 was one of AMD's earliest Llano chips; a 100W 2.9GHz quad-core with an integrated Radeon 6550D. It didn't ship in high quantity - AMD chose to emphasize shipping out mobile Llano's rather than their desktop counterparts. Llano is a much stronger mobile chip than it is on the desktop; AMD has been unable to scale the chip to higher clock speeds (think 3GHz+) without dramatically increasing its TDP.

Llano's Achilles heel is the interconnect between its CPU and GPU; the communication channel is very similar to an old-school motherboard northbridge implementation. It's easy for the CPU to transfer data to the GPU but

much more difficult for the GPU to do the same – which means it's also much harder for AMD to take advantage of Llano's array of GPU cores as a general-purpose compute array. Bandwidth is quite limited; Llano's GPU is critically dependent on main memory bandwidth to function well.

Now, let's talk about the Radeon 7670. It's a rebranded HD 6760, based on the budget Turks 40nm GPU. According to IGN, "When the APU is paired with the HD 7670, however, Sony will be able to utilize an asymmetrical CrossFire configuration to share the load of realtime graphics processing." That's technically true, but the benefits of Hybrid Crossfire are limited to DX10/11 games (it's unclear how AMD would scale the benefit to OpenGL and older DX9 titles are often slower than they'd be with just the dGPU.) Scaling benefits are also erratic and vary significantly from game to game.

The reason we don't believe reports that Sony would adopt the Llano+6760 is that AMD has **much** better hardware either already shipping or coming in the very near future – certainly well before the PS4's launch date. Llano may have done a great job getting AMD's foot in the door, but the chip is based on AMD's four-year-old Shanghai CPU. AMD has no plans to continue building Llano at nodes below 32nm, and console manufacturers always plan to scale a CPU through multiple process nodes. The current PS3 is produced on a 45nm/40nm process, having begun life at 90nm.

If Llano's GPU was good, Trinity's is expected to be significantly better. More importantly, its GPU is based on Cayman, which means it's a substantial improvement over the HD 5000-era part baked into Llano. Similarly, AMD might well target a budget price point for whatever GPU the PS4 eventually uses, but it probably won't be derived from a graphics architecture that'll already be three years old by the time the system ships.

openSUSE 12.2 review (2012-09-26 11:58)

I installed this in Virtual box 4.1 on my Scientific Linux 6.3 box, because I had a class that uses Virtual box. KDE is more stable now in 4.8.4. I have the 3.4.6 kernel so now 3.1 in openSUSE 12.1 looks a little bit outdated here. Scientific Linux 6.3 has some kernel 3.3 features in 2.6.32.279. This operating system is more secure than Windows 7 and already in the state with PC-BSD with PF Firewall, and ZFS / UFS encryption. The US Government makes the obvious mistake of choosing Linux over PC-BSD and calling that securest workstation. Linus Towards sums up 386BSD kicking

Linux's butt in 1993.

"If 386BSD had been available when I started on Linux, Linux would probably never had happened." **Linus Torvalds**

You probably want to upgrade to this openSUSE release so that you can run a fully functional BTRFS file system which tries to copy FreeBSD ZFS features. BTRFS is past beta. EXT4 is lacking FREEBSD features.

Right now, I am busy updating my 32-bit PCs with openSUSE 12.2. Crossover Linux Pro 9.2.0 installs fine so i get Winamp and VLC. File system checking is quicker. Virtual Box is out for both openSUSE and FREEBSD.

Its nice that I can play all the Gnome games in KDE and vice versa.

I don't know how anybody could beat me, in 2002, I was playing with Red Hat and SUSE 8.0 and than in 2005, I had Gnoppix (ubuntu 7.04) . I beat most people to Linux. Now that Linux is the fad and nothing special, I guess all I have are my videogames. I even got an Android Linux, the JXD S601, now.

openSUSE 12.2 is pretty stable.

I give it 9.0 out of 10.

Lake Wassata State Park / Rebel T4i on 12/25 (2012-10-02 17:12)

This was done on a Canon Rebel XSI with a DIGIC III processor. I don't use the iPhone for my pictures, because I don't have 3G service so there is no point. For Christmas, I asked for a Canon rebel T4i with DIGIC 5 processor. This camera can take H.264 video clips for Youtube. I rented the Rebel XSI for this trip. The Canon Rebel T4i I am getting for Christmas will have a better lens and have less noise. I am going for the Canon EF-S 55-250mm f/4.0-5.6 IS II Telephoto Zoom Lens once I get the Rebel T4i.

SHMUPs XII - bought Hyper Duel (2012-10-04 16:15)

Since I already have Battle Garrega, Radiant Silvergun, DoDonPachi, and Soukyugerentai to play on the Pro Action Replay, I thought I buy Hyper Duel. Hyper Duel is as expensive as Panzer Dragoon Saga which was about a 9/10 RPG that used both SH2s and all video chips of the Sega Saturn. Hyper Duel also uses both SH2s and is graphically superior to the arcade version in Saturn Mode.

Wii U December 2012 /w New Super Mario Bros. U

Xbox 720 December 25, 2013

Playstation 4 December 25, 2014

Sony announced that PS4 is coming out in 2014 so it can have a better graphic processing unit (maybe 3 GB GDDR5 Radeon HD 8870). It is also sad that it has to be released two years after Wii U. The ports might not be out. There is

only room for one christmas present annually? I know I already like the dual shock 4.

Sony was getting screwed by iPad gamers who spend \$10 on their game that has Super Nintendo gameplay. Are those stupid apple gamers in the 1990s or 2010s. Stupid Apple gamers who even prefer iPad over today's RPGs on Xbox 360 or PS3. Their \$10 doesn't play like Langrisser 2 either.

So I am getting both a Canon Rebel T4i (old school SLR user) and Wii U in December. Copy me if you want and post samples at the Room of Doom or Flickr. When I own a camera, I own one with a DIGIC 5 so I can use it for 10+ years. My 2002 birthday present was a 3 MP Sony DSC-S75 so a 10 year wait. The other cameras within my price range looked worse than the DSC-S75. The DSC-S75 has much lower noise than sub-150 cameras.

I am looknig forward to Quake 5, Doom 4, Gears of War 6, Halo 5, Forza Motorsport 5, and Fable 5 on Xbox 720.

Then I believe I'll like Gran Turismo 6, Final Fantasy XV, Tales of , Dead Space 3, Dark Souls 2, Star Ocean 5, Elder Scrolls VI, Fallout 5, Disagea 5, Soul Calibur VI, Tekken vs. Street Fighter 2, Marvel vs. Capcom 4, Tekken 7, Ridge Racer 9, Dead or Alive 6 on Playstation 4

As far as Wii U, I could buy a Mario Kart 8, Super Mario Galaxy 3, Paper Mario 6, Metroid Prime 4/5, Legend of Zelda U, and Super Smash Bros. U. I own Batman City and Teken Tag Tournament 2.

Bought Dracula X SNES (2012-10-14 04:57)

I guess I choose the Super Nintendo game that was better than Super Castlevania IV, Dracula X. Dracula X is a sequel to the TurboGrafx-16 Dracula X, because Dracula XX. Dracula X has different levels than Dracula X Chronicles for PSP. I've played many Castlevania games including Super Castlevania IV, Bloodlines, Symphony of the Night, Castlevania (Nintendo 64) Circle of the Moon, Harmony of Dissonance, Aria of Sorrow, Lament of Innocence, Dawn of Sorrow, Portrait of Ruins, Order of Shadows, Order of Ecclesia, and Lords of Shadow.

The Halloween season got me interested in Dracula. I bought the old Universal Studios Dracula Legacy Collection, Frankenstein Legacy Collection, Invisible Man Legacy Collection, and The Mummy Legacy collection.

I had this game loaded on the GP2X Caanoo emulator handheld and Dracula X is really good. You don't have a 8-way D-pad for the Lasoo like in Super Castlevania IV, only four-way. He only automatically jumps two ways making for timing difficulty. It's quite expensive at \$70, but more worth it than Earthbound (for kids), and Mega Man X2, X3.

I imagine myself growing older, happy that I bought it when I did. I think that Dracula X Chronicles remake is more fun than Dracula X for SNES. I own half of the Castlevania games already. It may help my credibility online on Gamespot and IGN to own Dracula X. Most 16-bit collectors seem to own Bloodlines or IV. Have you heard the saying, "If you

don't own Bloodlines, you're not a true 16-bit gamer?" I bought Castlevania Bloodlines for that stereotype alone. Its a great title for a game collector, because it has the Castlevania label and extremely difficult with those medusa heads and skulls floating.

Bought Shining Force III (2012-10-16 17:22)

I love RPGs which is why last year I bought Panzer Dragoon Saga, the best game nobody has played. Panzer Dragoon Saga used Saturn to its full potential. It had polygon transparency that 90 % of Saturn games never had. Squaresoft, had it developed for Saturn, would've had polygon transparencies. Saturn only had one high profile RPG, Panzer Dragoon Saga. I bought a RPG For Sega Saturn, Shining Force III Scenario I, a 1998 game. I've played all the high budget Squaresoft, Working Designs, Atlus and Enix games for Playstation in the 2000s. I've played Panzer Dragoon Saga, the only RPG. Dragon Force, which I also own, is a strategy RPG. I only played a days worth on Dragon Force. Dragon Force isn't up to par with Final Fantasy Tactics. Shining Force III emulates the greatness of Shining Force II, which was Sega Genesis's second best RPG after Phantasy Star IV. This game came out 2 years after Super Mario RPG and Sonic 3D Blast. Sega had this thing about 2.5D games on Saturn. Sega Saturn had many 2.5D shoot em ups like Radiant Silvergun, Don Don Pachi, and Battle Garegga.

Shining Force III is well received from videogame reviews, about a 8.5 out of 10, an equivalent of Atlus's Persona 2 or Squaresoft's Final Fantasy Tactics for Playstation.

PC-BSD 9.1 (2012-10-21 06:25)

I downloaded PC-BSD 9.1. It came with KDE 4.8.4 Gnome 2.32.2, LXDE 0.5.9 and XFCE 4.10. The DVD finally came with a Radeon driver. It's installer streamlined partitioning so you can check mark GPT partition which is a lot simpler than in PC-BSD 9.0. There is a bug in the partitioner where it will only recognize Linux partitions and NTFS. You'd have to first resize in Windows than partition free space to EXT4 in Gparted.

during installs and I no longer need installation DVD to fix the partition. That's a big plus.

The large PBI installers that worked in PC-BSD 9.0 are compatible with 9.1. I have Firefox 10, Libreoffice 3.4.5, Wine 1.3, Dia, and Opera 11.01.

Top 5 reasons to vote Romney (2012-10-23 06:14)

1) Mitt is from a blue state and understands how to work with the other party: Mitt Romney spent four years as governor of Massachusetts, which is one of the bluest blue states. In fact, as Romney has noted many times, his legislature was 87 % Democrats and yet, he still managed to pass legislation and balance the budget. On the other hand, Barack Obama has spent the last four years at loggerheads with the Republicans in Congress. You can argue about whose fault it is, but the fact of the matter is that Barack Obama and the Republicans in Congress have proven to be incapable of cooperating and that seems unlikely to change if he's re-elected. Maybe the same thing will happen if Romney gets into the White House, but he at least has a track record of success in that area while Barack Obama does not.

2) Mitt Romney is a moderate Republican: Take it from someone who ran Notmittromney.com during the primaries and preferred Newt Gingrich, Rick Perry, Herman Cain, Michele Bachmann, Rick Santorum, and Jon Huntsman to Romney: Romney was not one of the more conservative candidates running. Although it's possible that Romney will govern very conservatively if he's elected and many of us on the Right will do all we can to try to influence him to do that, the biggest reason some of us fought so hard to stop Mitt Romney was that we feared he would be just as much of a moderate in the White House as he was as the governor of Massachusetts. As a movement conservative, I consider that to be a bug, but if you're an undecided voter, that's probably exactly the kind of feature you're looking for in a President.

3) He'd be one of the most decent men ever to sit in the Oval Office: This will sound too good to be true, but most of the people reading this column don't know a single, solitary person who is more compassionate and giving than Mitt Romney. Just to name a few of Mitt Romney's acts of charity, he raked leaves for the elderly, he bought milk for veterans at a VA hospital for two years, he helped a dying 14 year old boy write his will. At one point he devoted 10-20 hours per week serving in his church. He made Thanksgiving dinner for a family with a sick child and offered to pay for the college education of two boys who were made quadriplegics in a car wreck. Despite what you may hear in campaign commercials, Mitt Romney is exactly the sort of fundamentally decent man that we should want in a position of power.

4) Who better to get the economy going than a successful businessman? As Paul Ryan noted during his debate with Joe Biden, the economy isn't doing so well.

Look, did they come in and inherit a tough situation? Absolutely. But we're going in the wrong direction. Look at where we are. The economy is barely limping along. It's growing at 1.3 percent. That's slower than it grew last year and last year was slower than the year before. Job growth in September was slower than it was in August, and August was slower than it was in July. We're heading in the wrong direction; 23 million Americans are struggling for work today; 15 percent of Americans are living in poverty today. This is not what a real recovery looks like.

Who knows more about getting the economy on track, an incredibly successful businessman like Mitt Romney or a politician like Barack Obama? Who knows more about creating jobs? Obviously Barack Obama isn't very good at it; so isn't it time to give a man who has proven himself in the business world a shot at it?

5) What message does it send if you reward failure? When you look at Barack Obama's first term, the successes have been few and far between. The economy is terrible and getting weaker; the unemployment rate is the same as it was

when Obama was elected; gas prices have soared. He has run up a trillion dollars of debt every year of his presidency; he spent an inordinate amount of time pushing through an unpopular health care bill that wasn't even read before it was passed; his foreign policy in the Middle East is in chaos. There just isn't much there that makes you say, "Wow, the country could really use a little more of that over the next four years." Meanwhile, Barack Obama hasn't even bothered to flesh out a second term agenda. If the American people reward that kind of performance with a second term, there's no reason to expect anything other than more of the same. Can the country really afford to have another four years just as bad as the last four years?

Summerwind (2012-10-27 15:26)

If a person was forced to choose what the greatest ghost story in Wisconsin might be, it would almost undoubtedly be the legend of Summerwind. This haunted mansion has spawned more strange tales and stories than any other location in the state. What dark secrets remain hidden in the ruins of this once grand estate? Were the stories of ghostly encounters and messages from beyond really true ... or were they part of an elaborate publicity hoax?

Summerwind (Photo Courtesy of Todd Roll)

Located on the shores of West Bay Lake, in the far northeast regions of Wisconsin, are the ruins of a once grand mansion that was called Summerwind. The house is long gone now, but the memories remain ... as do the stories and legends of the inexplicable events that once took place there. Summerwind is perhaps Wisconsin's most haunted house, or at least it was, before fire and the elements of nature destroyed her. Regardless, even the ravages of time cannot destroy the haunted history of the house.

The mansion was built in 1916 by Robert P. Lamont as a summer home for he and his family. Nestled on the shores of the lake, the house caught the cool breezes of northern Wisconsin and provided a comfortable place for Lamont to escape the pressures of everyday life in Washington D.C., as he would later go on to serve as the Secretary of

Commerce under President Herbert Hoover.

But life was not always sublime at Summerwind during the years of the Lamont family. For those who claim that the ghost stories of the house were "created" in later years, they forget the original tale of Robert Lamont's encounter with a spirit. Legends of the house say that Lamont actually fired a pistol at a ghost that he believed was an intruder. The bullet holes in the basement door from the kitchen remained for many years.

Upon the death of Robert Lamont, the house was sold ... and sold again. It seemed that nothing out of the ordinary really happened there, save for Lamont's encounter with the phantom intruder, until the early 1970's. It was in this period that the family living in the house was nearly destroyed ... supposedly by ghosts.

Arnold Hinshaw, his wife Ginger, and their six children, moved into Summerwind in the early part of the 1970's. They would only reside in the house for six months, but it would be an eventful period of time.

From the day that they moved in, they knew strange things were going on in the house. It had been vacant for some time ... but it had apparently been occupied by otherworldly visitors. The Hinshaws, and their children, immediately started to report vague shapes and shadows flickering down the hallways. They also claimed to hear mumbled voices in darkened, empty rooms. When they would walk inside, the sounds would quickly stop. Most alarming was the ghost of the woman who was often seen floating back and forth just past some French doors that led off from the dining room.

The family wondered if they were simply imagining things but continued events convinced them otherwise. Appliances, a hot water heater and a water pump would mysteriously break down and then repair themselves before a serviceman could be called.

Windows and doors that were closed would reopen on their own. One particular window, which proved especially stubborn, would raise and lower itself at all hours. Out of desperation, Arnold drove a heavy nail through the window casing and it finally stayed closed.

On one occasion, Arnold walked out to his car to go to work and the vehicle suddenly burst into flames. No one was near it and it is unknown whether the source of the fire was supernatural in origin or not, but regardless, no cause was ever found for it.

Despite the strange activity, the Hinshaws wanted to make the best of the historic house so they decided to hire some men to make a few renovations. It was most common for the workers to not show up for work, usually claiming illness, although a few of them simply told her that they refused to work on Summerwind ... which was reputed to be haunted. That was when the Hinshaws gave up and decided to try and do all of the work themselves.

One day they began painting a closet in one of the bedrooms. A large shoe drawer was installed in the closet's back wall and Arnold pulled it out so that he could paint around the edges of the frame. When he did, he noticed that there seemed to be a large, dark space behind the drawer.

Ginger brought him a flashlight and he wedged himself into the narrow opening as far as his shoulders. He looked around with the flashlight and then suddenly jumped back, scrambling away from the opening. He was both frightened and disgusted ... there was some sort of corpse jammed into the secret compartment!

Believing that an animal had crawled in there and died many years ago, Arnold tried to squeeze back in for a closer look. He couldn't make out much of anything, so when the children came home from school, he recruited his daughter Mary to get a better look. Mary took the flashlight and crawled inside. Moments later, she let out a scream ... it was a human corpse! She uncovered a skull, still bearing dirty black hair, a brown arm and a portion of a leg.

Why the Hinshaws never contacted the authorities about this body is unknown. Was the story concocted later to fit into the tales of "haunted" Summerwind? Or was their reasoning the truth ... that the body had been the result of a crime that took place many years ago, far too long for the police to do anything about it now.

Had they been thinking things through, they might have realized that this body might have been the cause of much of the supernatural activity in the house ... removing it might have laid the ghost to rest, so to speak.

Regardless, they left the corpse where they found it ... but it will figure into our story once again.

Shortly after the discovery of the body in the hidden compartment, things started to take a turn for the worse at Summerwind.

Arnold began staying up very late at night and playing a Hammond organ that the couple had purchased before moving

into the house. He had always enjoyed playing the organ, using it as a form of relaxation, but his playing now was different. His playing became a frenzied mixture of melodies that seemed to make no sense, and grew louder as the night wore on. Ginger pleaded with him to stop but Arnold claimed the demons in his head demanded that he play. He often crashed the keys on the organ until dawn, frightening his wife and children so badly that they often huddled together in one bedroom, crying and cowering in fear.

Arnold had a complete mental breakdown and at the same time, Ginger attempted suicide.

Were the stories of strange events at Summerwind merely the result of two disturbed minds? It might seem so ... but what about the children? They also reported the ghostly encounters. Were they simply influenced by their parents' questionable sanity ... or were the stories real?

The family's connection with the house would continue for years to come.

While Arnold was sent away for treatment, Ginger and the children moved to Granton, Wisconsin to live with Ginger's parents. Ginger and Arnold would eventually be divorced when it looked as though Arnold's hopes for recovery were failing. Ginger later recovered her health, away from Summerwind at last, and she married a man named George Olsen.

Things seemed to be going quite well for her in her new peaceful life, until a few years later, when her father announced that he was going to buy Summerwind.

Raymond Bober was a popcorn vendor and businessman who with his wife Marie, planned to turn the old mansion into a restaurant and an inn. He believed that the house would attract many guests to the scenic location on the lake. They had no idea what had happened to their daughter in the house.

Ginger was horrified at her parent's decision. She had never given them all of the details about what had happened during the six months that she had lived in the house and she refused to do so now. What she did do was to beg them not to buy Summerwind.

Bober's mind was made up however. He announced that he realized the house was haunted, but this would not deter him. He claimed that he had spent time at the house and knew the identity of the ghost that was haunting the place. According to Bober, the ghost was a man named Jonathan Carver, an eighteenth century British explorer who was haunting the house and searching for an old deed that had been given to him by the Sioux Indians. In the document, he supposedly had the rights to the northern third of Wisconsin. The deed had supposedly been placed in a box and sealed into the foundation of Summerwind. Bober claimed that Carver had asked his help in finding it.

Bober wrote a book about his experiences at Summerwind and his communications with Carver through dreams, trances and a Ouija board. The book was published in 1979 under the name of Wolfgang von Bober and was called THE CARVER EFFECT. It is currently out-of-print and very hard to find.

Shortly after Bober bought the house, he, his son Karl, Ginger and her new husband, George, spent a day exploring and looking over the house. The group had wandered through the place and as they were leaving the second floor, George spotted the closet where the secret compartment was hidden. He began pulling out the drawers and looking behind them, although Ginger begged for him to stop.

George was confused. He had simply been curious as to what might be in the drawers. Up until then, Ginger had never told anyone about finding the body behind the closet. Sitting in the kitchen later, she would tell them everything.

After hearing the story, the men rushed back upstairs and returned to the closet. Ginger's brother, Karl, climbed into the space with a light and looked around. In a few moments, he climbed back out ... it was empty!

Bober and George also inspected the small space and found nothing. Where had the corpse gone? Had it been removed, either by natural or supernatural forces?

Or, most importantly, had it ever really been there at all?

Toward the end of that Summer, Karl traveled alone to the old house. He had gone to get a repair estimate on some work to be done on the house and to check with someone about getting rid of the bats which were inhabiting the place. He also planned to do some yard work and to get the place cleaned up a little.

It started to rain the first day that he was there and he began closing some of the windows. He was upstairs, in the dark hallway, and heard a voice call his name. He looked around but there was no one there. Karl closed the window and went downstairs. He walked into the front room and heard what sounded like two pistol shots! He ran into the

kitchen and found the room filled with smoke and the acrid smell of gunpowder ... apparently someone had fired a gun inside of the house!

Karl searched the place, finding the doors locked and undisturbed. There appeared to be no one inside and he returned to the kitchen. He began looking around the room and discovered two bullet holes in the door leading down to the basement. He examined them closely and realized that they were not new holes at all ... but old bullet holes that had worn smooth around the edges.

They were apparently holes left behind from Robert Lamont's encounter with a ghost in the kitchen. Perhaps events from the past were replaying themselves at Summerwind!

No matter what the explanation, it was enough for Karl and he left the house that afternoon.

The plans to turn the house into a restaurant did not go smoothly. Workmen refused to stay on the job, complaining of tools disappearing and feelings as if they were being watched. Marie Bober agreed with their complaints. She was always uneasy in the house and frequently told people that she felt as if she was followed from place to place whenever she was inside.

Most disturbing to Bober however was the apparent shrinkage and expansion of the house. Bober would measure rooms one day and then find that they were a different size the next day. Usually, his measurements were larger than those given in the blueprints of the house ... sometime greatly larger. At one point, Bober estimated that he could seat 150 people in his restaurant but after laying out his plans on the blueprints of Summerwind, he realized that the place could seat half that many.

Photographs that were taken of the house, using the same camera and taken only seconds apart, also displayed the variations of space. The living room was said to show the greatest enlargement.

Bober compared his photos of the living room with those that Ginger had taken when she and Arnold moved in. Ginger's photos showed curtains on the windows that she took with her when she moved out. The curtains were physically absent in the room that Bober photographed ... but somehow they appeared in his photos!

Like the incident involving Karl and the pistol shots, could Summerwind be a place where time inexplicably repeats itself? Perhaps the place wasn't haunted at all, but instead, was a mysterious site where time was distorted in ways that we cannot understand. Perhaps the shadows and figures that were seen could have been people or images from the past (or the future) and perhaps the sound of someone calling Karl's name would happen in reality ... several months later.

We will never know for sure now, but the idea is something worth considering.

Eventually, the project was abandoned and Bober would never see the dream of his restaurant and inn. Strangely though, despite his claims that he was an earthly companion of the ghostly Jonathan Carver, the Bobers never spent the night inside of the house. They chose instead to sleep in an RV that they parked on the grounds. Also strange was the fact that Carver (if the ghost existed) chose to manifest himself in such malevolent ways ... especially if he was looking for help in finding his deed.

Bober's explanation for this was that Carver resented anyone living in the house or trying to renovate the place, at least until the deed was found. Bober spent many days searching the basement for where the deed might be hidden, chipping the foundation and peering into dark holes and crevices.

To this day, the mysterious deed has never been found.

In the years that followed Bober's abandonment of Summerwind, a number of skeptics came forward to poke holes in some of Bober's claims. Many of their counter-claims, however, have been nearly as easy to discredit as some of Bober's original ones.

Obviously, we are never going to know for sure if Summerwind was really haunted. The house is gone now and we are left with only the claims, reports and witness accounts of Bober and his family.

We can examine the claims of the family, and the skeptics, and try to make sense of it all.

In 1983, a freelance writer named Will Pooley set out to gather the facts behind the story and discredit it. His research claimed that even if Bober had found Carver's deed, it would have been worthless. He based these findings on the fact that the British government ruled against an individual's purchase of Indian land and also that the Sioux had never claimed land west of the Mississippi River.

First of all, the land was not sold to Carver, it was given to him in return for assistance that he had given to the Indians, so British law would not have ruled against this. On the other subject, the Sioux Indians were not a single tribe, they were an entire nation, made up of many different tribes. It is possible, and very likely, that one tribe that belonged to the Sioux nation could have lived in Wisconsin. The white settlers pushed the Indians further and further west and as this particular tribe abandoned their lands, they could have deeded them to Carver.

Pooley also argued that the deed to the property had been located in the old land office in Wausau, Wisconsin in the 1930's and that it is unlikely that Carver even journeyed as far north as West Bay Lake.

But would he have had to have traveled to northern Wisconsin to hold a deed to the land? And why would there not have been another deed filed for that piece of land? Someone could have claimed it many years later, not even realizing that Carver already held the title to it.

He also argued that the deed could have never been placed in the foundation of the house anyway ... Summerwind had been built more than 130 years after Carver died. To this, it can only be argued that many events of the supernatural world go unexplained.

One man that Pooley did talk to however, was Herb Dickman of Land 'O Lakes, Wisconsin. He had helped pour the foundation for the house in 1916 and recalled that nothing had been placed in the foundation ... a box containing a deed or anything else. So, who really knows?

Apparently, Bober was not always the most credible person either. Residents who lived close to Summerwind said that Bober spent less than two summers at the estate. After abandoning plans for the restaurant, he tried to get a permit to operate a concession stand near the house but local ordinances prohibited this. Perhaps he was planning

the idea of tours of the "haunted" house ... and idea that would come along a little later.

There was even some uncertainty as to whether or not Bober even owned Summerwind. One area resident told Pooley that Bober had tried to buy the house on a contract-for-deed but the deal had fallen through. The house had been abandoned and no one laid claim to it, save for the bank, and they never realized what Bober was up to out there. This story has never been verified however and it cannot be proven that Bober did not own the place.

So how much of the story that Bober wrote about in his book is true? Was the house really haunted, or was the story of the haunting merely a part of a scheme by Raymond Bober to draw crowds to a haunted restaurant?

Those who live near the house claim that the idea that it is haunted has all come from the fact that the mansion was abandoned and from Bober's wild claims. But what else would they say?

These neighbors have often made it very clear that they resent the strangers who have come to the property, tramping over their lawns and knocking on their doors. They say that the chartered buses that once came and dumped would-be ghost hunters onto the grounds of Summerwind were also unwelcome. These are the last people to ask for an objective opinion on whether this house is actually haunted.

So there remains the mystery ... was Summerwind really haunted? No one knows and if they do, they aren't saying.

The house was completely abandoned in the early 1980's and fell deeper and deeper into ruin. Bats had already taken up residence years before and the house became a virtual shell, resting there in a grove of pines. The windows were shattered and the doors hung open, inviting nature's destructive force inside.

In 1986, the house was purchased by three investors who apparently thought that they could make a go of the place again. But it was not to be ... forces greater than man had other ideas. Summerwind was struck by lightning during a terrible storm in June of 1988 and burned to the ground.

Today, only the foundations, the stone chimneys and perhaps the ghosts remain ...

Christopher Langan became evil with intelligent design theory! (2012-10-31 19:15)

On several most evil books lists, Darwin's Black Box is the most evil book out there. That is what Langan believes in. Chris Langan has an iq of 210. Despite much refutation from the Scientific community, many fundamentalists still use this as a "source" for proof that evolution is not true. The book itself was not peer reviewed as Behe claimed under oath, and the Science community has overwhelmingly rejected it. It should be noted that Behe himself is not a fundamentalist and does not believe in a literal interpretation of the Bible.

Wii U (2012-11-04 23:09)

The Wii U is a video game console from Nintendo and the successor to the Wii.[6] The system was released on November 18, 2012, in North America; November 30, 2012, in the PAL regions; and on December 8, 2012, in Japan. It is the first entry in the eighth generation of video game home consoles, and will compete with Sony's PlayStation 4 and Microsoft's Xbox One.

The Wii U is the first Nintendo console to support high-definition graphics, capable of producing video output up to 1080p, and has 2 GB of RAM with half dedicated to the console's operating system. The console was released in two versions: a "Basic" white-colored version with 8 GB of internal Flash storage; and a "Deluxe"/"Premium" black-colored version with 32 GB of Flash storage. The Deluxe package additionally includes stands for the console and for the GamePad, a charging dock for the GamePad, and a pack-in game. An HDMI cable is included with both

versions. The Wii U's primary controller is the Wii U GamePad, which features an embedded touchscreen. The touchscreen is used to supplement the main gameplay shown on the television or, with games supporting Off-TV Play, can allow the player to continue playing games by displaying the main gameplay even when the television is off. In addition to the Wii U GamePad, a more traditional controller, called the Wii U Pro Controller, may be used.

The system is backward compatible with Wii, and Wii U games may support compatibility with Wii peripherals, such as the Wii Remote and the Nunchuk. While it is not backward compatible with Nintendo GameCube discs or peripherals, Nintendo of America's director of entertainment and trend marketing indicated that select GameCube titles would become available for download, although Nintendo has since stated it has nothing to announce regarding this.

History

Development

The console was first conceived in 2008,[19] after Nintendo recognized several limitations and challenges with the Wii, such as the general public perception that the system catered primarily for a "casual" audience. With Wii U, Nintendo explicitly wishes to bring "core" gamers back. Game designer Shigeru Miyamoto admitted that the lack of HD and limited network infrastructure for the Wii also contributed to the system being regarded in a separate class to its competitors' systems, the Xbox 360 and PlayStation 3. It was decided that a new console would have to be made to accommodate significant structural changes.

Within the company, there was much debate over the idea for the new console, and the project was scrapped and restarted several times. The concept of a touchscreen embedded within the controller was originally inspired by the blue light on the Wii that illuminates to indicate new messages. Miyamoto and his team wanted to include a small screen to provide game feedback and status messages to players (in similar vein to the VMU for Sega's Dreamcast). Much later in development, this was expanded to a full screen that could display the game being played in its entirety, a concept which was suggested but not financially viable earlier in the project.

Pre-announcement

Initial beliefs about the Wii's successor were that the new console would be an "enhanced version" named the "Wii HD." Many journalists claimed that it would have a high-definition video output along with a Blu-ray Disc drive built in with a release sometime in 2011. However, Nintendo President Satoru Iwata later stated that he saw "no significant reason" to include HD into the Wii and that such an addition would be better suited for a successor. Shigeru Miyamoto also expressed Nintendo's interest in working with HD graphics but clarified that the company is primarily focused on the gameplay experience. In October 2009, Miyamoto said that they had no concrete plans about a successor yet, but knew that the successor would possibly still feature motion controls and they expected its interface to be "more compact" and cheaper. Iwata also mentioned that the Wii's successor might be 3D-compatible but concluded that the adoption rates of 3D televisions should increase to at least 30 % first.

In 2010, Nintendo of America President Reggie Fils-Aime commented that he felt "confident the Wii home entertainment console has a very long life in front of it" and declared that a successor would not be launched in the near future. At the E3 2010 presentation, Iwata revealed to the BBC that they would begin announcing a new console once Nintendo ran "out of ideas with the current hardware and cannot give users any more meaningful surprises with the technology [they had]". Later, at an investor's meeting, he disclosed that they were "of course studying and developing the next console to Wii", but they were simultaneously keeping its concepts secret because it was "really important for [his] business to positively surprise people." [34] Reggie Fils-Aime commented in a CNN article and claimed that Nintendo's next home console would not likely feature stereoscopic 3D, based on the 3D technology Nintendo had experimented with.

In April 2011, an uncredited source indicated that Nintendo was planning on unveiling the successor to the Wii during E3 2011, codenamed Project Café,[6] that would be capable of gameplay in HD resolutions and will be backward compatible with Wii software. It was also rumored that the console would feature an all new controller with a built in high-resolution screen. The origin of the rumor for the codename (and many other details) was French technology publication 01net. 01net had previously revealed the technical specifications of Sony's PlayStation Vita before it was announced. The new machine was believed twice as powerful as the PlayStation 3 and Xbox 360.

Many claims focused on the new controller, which would feature dual analog sticks, a standard D-pad, two bumpers,

two triggers and "possibly more". IGN compared the functionality of the new controller to a Nintendo GameCube controller. 01net claimed the controller would be "a touch tablet controller, with moderate graphic output," comparing the controller to an iPad with buttons. They also added that there would be a front-facing camera on the controller. Supposedly, the controller would also feature six-axis motion controls that outperform a PlayStation Move motion controller (in terms of fidelity), as well as a built-in sensor bar.[44] The new controller features a 6.2-inch touchscreen. 01net took the rumor a step further and claimed that the touchscreen would be single-touch. Sources from CVG claimed that the controller featured a high-resolution screen. IGN claimed that the controller would allow players to stream entire games to the controller from the console, and that the console itself "is likely to resemble a modernized version of the Super Nintendo Entertainment System (SNES)."

According to Edge, THQ president Brian Farrell allegedly told investors: "We don't expect new hardware any time soon from either Microsoft or Sony. It's different on Nintendo – we'll let them announce their new hardware".

Announcement

The Wii U shown at E3 2011, demonstrating the various uses of the GamePad controller.

On April 25, 2011, Nintendo released a statement officially announcing a system to succeed the Wii. They simultaneously announced that it would be released during 2012, and that playable console units would be present at E3 2011 (June 7–9). Speaking at an investor's conference, Nintendo CEO Satoru Iwata stated the Wii successor would "offer something new for home game systems." Iwata also confirmed that the successor to Wii would not launch in the fiscal year of 2012, meaning that it would release after April 2012.

On May 4, 2011, Kotaku reported that Project Café would have 8 GB of flash-based memory on board, with the assumed purpose of storing game saves. The game discs used by the console were said to be of a proprietary format, and to hold up to 25 GB of data, which is similar to the capacity of a single-layer Blu-ray Disc. In early June, Nikkei issued a report confirming earlier rumors that the new console would feature a controller with a 6 inch touchscreen that would give tablet-like controls to games, as well as a rechargeable battery and a camera. Nikkei said the system would be released in mid-2012.

A prototype version of Wii U was showcased at E3 2011. The design of the console and controller were not definitive versions. The controller demonstrated a touch screen over 6 inches wide and contained a built-in microphone, speakers, gyroscope, accelerometer, rumble and camera. All processing is done on the console itself, the output of which can be displayed either on a TV, the controller, or both simultaneously; however, the screen only supports single touch, not multitouch, going against a popular trend across the technology industry, and, at the time of unveiling, the system only supported output to one tablet controller at a time, though Nintendo was reportedly looking into allowing for such functionality in the final version of the hardware. Games that were confirmed were New Super Mario Bros. U and the change of console from the Wii to Wii U of the long-in-development Pikmin 3. A list of third party titles was also announced to be available at release, and were on show with trailers from PlayStation 3 and Xbox 360 versions.

Shares of Nintendo fell almost 10 percent in the two days following the unveiling of Wii U to levels not seen since 2006. Some analysts expressed skepticism in regards to the addition of a touch screen to the controller, expressing concern that the controller would be less affordable and less innovative than the original Wii Remote. When asked about whether or not the Wii U was going to support 3D, Iwata told San Jose Mercury News, "If you are going to connect Wii U with a home TV capable of displaying 3-D images, technologically, yes, it is going to be possible, but that's not the area we are focusing on."

On January 26, 2012, Iwata told investors that the Wii U would be launched by the 2012 year end shopping season in all major regions, and that its final specifications and form factor would be revealed at E3 2012. Furthermore, Iwata stated that the console would feature a unified online system known as Nintendo Network, which would feature user account support as opposed to the use of friend codes. Nintendo Network would also provide the framework for online multiplayer interactions, add-on content sales, as well as online distribution of applications and video games.[62] Moreover, Iwata mentioned that the Wii U controller would support NFC, which would allow the system to wirelessly interact with figurines and cards created by developers. It would also allow for microtransactions to take place wirelessly using credit cards that have NFC support.

Launch

On September 13, 2012, during a Japanese Nintendo Direct presentation, Nintendo announced that launch date was

set to December 8, 2012 in Japan.[63] Later that day, Nintendo announced that the North American launch date would be November 18, 2012.[64] The Wii U was made available in two bundles: the Basic Set (\$299.99 in US) and the Deluxe Set (\$349.99 in US). Nintendo of Europe and Nintendo Australia also announced that the Wii U would be released in both regions simultaneously on November 30, 2012. It would also launch with the Basic Pack (\$349.95 AUD) and Deluxe Pack (\$429.95 AUD) bundles, with European prices being set by individual retailers.[65] The Basic bundle contains a Wii U with 8 GB of on-storage, the Wii U GamePad and stylus and an HDMI cable, while the Deluxe bundle adds on a Nintendo Network Premium subscription, 32 GB of on-storage, a sensor bar, the Nintendo Land game (all regions except Japan), as well as stands for the console and controller.

On July 13, 2013, Nintendo released a white version of the Premium Pack in Japan, as well as was as an official battery pack and charger dock for the Wii Remote capable of lasting 13 hours of gameplay before needing to be recharged, retailing at ¥4,200. Additionally, on July 25, the company also released an improved battery pack for the Gamepad controller. The standard 1500mAh battery is bundled with the console, while the new 2550mAh battery pack will increase its longevity between five and eight hours before needing to be recharged, retailing at ¥3,150.

On August 28, 2013, Nintendo announced the Deluxe/Premium 32 GB Model would get a price drop from \$349.99 to \$299.99, in the United States and Europe. It was also announced that the current \$299 Basic 8GB Wii U Model would stop production. This price drop would take effect starting on September 20, 2013.

Hardware

During a Nintendo Direct on September 13, 2012, Nintendo revealed that the Wii U would be available in two colors at launch, black and white. The white version is called the Basic Set in North America and the Basic Pack in the PAL regions and Japan and come with 8 GB of internal flash memory. The black version is called the Deluxe Set in North America and the Premium Pack in Europe and Australia and comes with 32 GB of internal flash memory. In Japan a white version of the Premium Pack was released on July 13, 2013.

An illustration of the Wii U MCM without heat spreader. The smaller chip, lower right, is the "Espresso" CPU made by IBM. The other chips are the "Latte" GPGPU (large chip) from AMD and an EEPROM chip (tiny) from Renesas.

The Wii U utilizes a custom multi-chip module (MCM) developed by AMD, IBM and Renesas in cooperation with Nintendo. Its MCM combines a central processing unit (CPU) and graphics processing unit (GPU), as well as an EEPROM memory controller. The CPU, designed by IBM, consists of a PowerPC 750-based tri-core processor "Espresso" clocked at 1.24 GHz. It is described by IBM as an "all-new, Power-based microprocessor", the processor is a multi-core design manufactured at 45 nm with an eDRAM cache of unknown size. It is produced by IBM at their 300 mm semiconductor manufacturing facility in East Fishkill, New York. The GPU, designed by AMD, consists of a AMD Radeon High Definition processor codenamed "Latte" packed with a 35 MB eDRAM cache built onto the die clocked at 550 MHz. The console also includes a secondary custom chip that handles undisclosed tasks. These tasks are handled seamlessly in the background during gameplay or while the system is in sleep mode. The console also contains a dedicated hardware audio DSP module.

The Wii U contains 2 GB of DDR3 system memory consisting of four 512 MB (4 Gb) DDR3-1600 DRAM chips with a maximum bandwidth of 12.8 GB/s, in which 1 GB reserved for the operating system and unavailable to games. This is 20 times the amount found in the original Wii. The GPU also features a 35 MB eDRAM cache memory. The memory architecture allows the CPU and GPU to access both the main DDR3 memory pool and the eDRAM cache memory pool, removing the need for separate, dedicated memory pools.

The read-only optical disc drive will read proprietary high-density Wii U Optical Discs (25 GB per layer) at 5x CAV, similar to Blu-ray Discs,[77][78] for a maximum read speed of 22.5 MB/s, and will also support Wii Optical Discs at 6x CAV for backwards compatibility with the Wii. To further enhance optical drive performance, the Wii U will also feature a Zlib decompression like its predecessor, allowing for greater real-term bandwidth. It is unknown whether the disc drive will be capable of reading dual-layer 50 GB discs or not. The console includes an 8 GB (Basic) or 32 GB (Deluxe (NA)/Premium (EU)) internal flash memory, expandable via SD memory cards up to 32 GB, only available in Wii Mode, and USB hard disk drives up to 2 TB.

The Wii U features 802.11 b/g/n wireless network connectivity and Fast Ethernet (requires an attachment), Bluetooth 4.0, four USB 2.0 ports (two at the rear and two at the front of the console) and an SD memory card slot (supports up

to SDHC cards). An additional power port is also included to power the Wii Sensor Bar, an auxiliary infra red emitter first introduced on the Wii. Audio/video output options include 1080p, 1080i, 720p, 576i, 480p, and 480i, through HDMI 1.4 and component video (YPBPR and D-Terminal), 576i, 480i (standard 4:3 and 16:9 anamorphic widescreen) through composite video, S-Video, RGB SCART and D-Terminal, six-channel 5.1 linear PCM surround sound, and RCA analog stereo. The console also supports stereoscopic 3D images and video.

^[a] Neither Nintendo, IBM nor AMD has revealed detailed specifications, such as the number of cores, clock rate, or cache sizes. References have been made to the chip containing "a lot" of eDRAM and "the same processor technology found in Watson".

Controllers

The Wii U GamePad is the main controller for the Wii U, and up to two GamePads can be connected per console.[82] The console will also be compatible with up to four Wii Remotes (Plus) with a Nunchuk/Classic Controller attachment, or up to four Wii U Pro Controllers for more traditional controls, or a combination of the two.[83] The console also supports the Wii Balance Board, and every official Wii accessory.

An illustration of the Wii U GamePad (White)

The Wii U GamePad is the Wii U's primary controller and comes bundled with the console. It features a built-in 6.2 inch (15.7 cm) 16:9 resistive touchscreen, which can either supplement or replicate the gameplay shown on the television display. It also features a built-in front-facing camera and sensor strip, a built-in microphone, stereo speakers, and supports NFC.[84] The Wii U GamePad supports nine-axis motion detection via a three-axis accelerometer, three-axis gyroscope and a three-axis magnetometer, and also comes equipped with a rumble feature.[85] It includes a removable, rechargeable lithium-ion battery capable of storing 1500 mAh and lasting 3–5 hours. The controllers weighs 1.1 lbs (500 g), has dimensions of 130 × 23 × 260 mm (5.3 × 0.9 × 10.2 in), and has etched plastic grips in its rear in order to increase its grip. The Wii U GamePad's wireless communication with the Wii U console is based on IEEE 802.11n operating at 5.2 GHz and technically supports repeaters[86], while using a proprietary transfer protocol and software co-developed by Broadcom and Nintendo.[87] The Wii U GamePad, however, is not compatible with the original Wii.

The controller also features the following buttons: HOME button, TV CONTROL button, START (+) and SELECT (-) button, dual clickable analog sticks, a D-pad, a four face buttons (A, B, X, Y), bumper buttons (R/L) and trigger buttons (ZL/ZR), and a POWER button. The START and SELECT buttons are represented by a "+" and "-" signs respectively. The analogue sticks are not restricted to 8-axis movement, a departure from previous Nintendo console controllers with analogue sticks.[citation needed] A TV CONTROL button opens an interface on the Wii U GamePad that acts as a television remote control, allowing the user to change the volume and switch channels or video input. This feature is also implemented in Nintendo TVii. The Wii U GamePad also features a dedicated volume slider, which controls the controller's speakers' volume. The controller comes with a stylus for interacting with the touch screen.

The Wii U GamePad features several output connectors. Its stereo jack (3.5 mm connector) will support the connection of a headset to allow a user to speak and hear audio simultaneously. The controller features an infrared transceiver, part of "TV CONTROL" feature. It will also be able to communicate with future accessories. A power port, a "Multi-Purpose External Extension Connector" (power and data transmission for possible future additional accessories), two metal contacts for charging cradle power connectors (at the bottom around external extension connector), and stereo speakers are included. The controller is charged via a proprietary cable and a dedicated charging cradle.

The Wii U GamePad has built-in near field communication, which according to Nintendo president Satoru Iwata, can be used for, among other uses, figurines that can interact with the console and wireless credit card payments with compatible cards.[84] The Wii U GamePad also allows for asymmetric gameplay, where the player using the controller has one gameplay experience, while competing players using a Wii Remote or a Wii U Pro Controller have different experiences. When using the "Off TV Play" function, the controller can also function as a standalone screen without the use of a television screen.

Wii U Pro Controller

The Wii U Pro Controller is the second controller released for the console, available separately. Like more traditional controllers, it features standard control sticks, buttons, and triggers. Nintendo unveiled the Pro Controller at E3 2012 with the aim of attracting more "hardcore" gamers to make the Wii U more competitive with Sony and Microsoft's

offerings. Many video game journalists have noted the similarity between the controller and Microsoft's Xbox 360 Controller. Nintendo claims that the design of the Pro Controller is an "enhanced version" of the Classic Controller and "offers a richer experience." Certain games with flexible control schemes, such as Call of Duty: Black Ops II and Trine 2: Director's Cut, are also compatible with the Classic Controller.

The Wii U Pro Controller is not compatible with previous-generation Wii games.

Wii Remote

The Wii Remote, also known colloquially as the Wiimote, and Wii Remote Plus, which come with a built-in Wii MotionPlus sensor, are also compatible with the Wii U. A main feature of the Wii Remote is its motion sensing capability, which allows the user to interact with and manipulate items on screen via gesture recognition and pointing through the use of accelerometer and optical sensor technology. Another feature is its expand-ability through the use of attachments. The Nunchuk, which complements the Wii Remote provides functions similar to those in the Wii U GamePad. Some other attachments include the Classic Controller, which offers a more traditional controls, similarly to the Wii U Pro Controller, the Wii Zapper, which is mainly use for first person shooter games, and the Wii Wheel, originally used for Mario Kart Wii and now also compatible with Mario Kart 8 among other Wii U racing games.

On July 13, 2013, Nintendo released an official battery pack and charger dock for the Wii Remote capable of lasting 13 hours of gameplay before needing to be recharged.

Near field communication (NFC)

The Wii U's near field communication chip is located on the Wii U GamePad. The NFC chip can be used to allow users to import content from supported devices. This is achieved by placing the device on the Wii U GamePad. The NFC chip also has the ability to write information on items which can be used as a means of transferring information.[94] Moreover, the NFC chip can also be used to make wireless transaction using supported credit cards by simply placing the credit card on top of the Wii U GamePad.

User interface

Main article: Wii U system software

The Wii U uses both the Wii U Menu and the Wii Mode depending on which application it is going to launch. The Wii U Menu is used to access applications built specifically for the Wii U system. On the other hand, the Wii Mode activates the system's backward compatibility with the original Wii and launches the Wii Menu.

The Wii U Menu dashboard

The Wii U Menu is the main dashboard of the system and is directly integrated with Miiverse and the Nintendo Network. It is a graphical user interface similar to the Wii's "Wii Menu" and Nintendo 3DS' HOME Menu. It allows launching software stored on Wii U optical discs, applications installed in the internal memory or an external storage device, or Wii titles through the system's "Wii Mode". Like the original Wii, discs can also be hot-swapped while in the menu. The Wii U Menu also allows users to access system applications such as the Miiverse, surf the internet using the Internet Browser, watch movies and TV shows on Nintendo TVii, download apps through the Nintendo eShop, and check for notifications. System settings, parental controls and the activity log can also be launched through the menu.

When the Wii U powers on, the television screen will show the WaraWara Plaza in which trending user status and comments on Miiverse are shown. Each user is represented by their respective Mii and is often associated with a Miiverse community. Users can save any Mii on the WaraWara Plaza to their personal library, Yeah! their post, write a comment, and send a friend request. By default, on the TV screen, the WaraWara Plaza is displayed while on the GamePad screen, application icons are displayed. These however can be swapped any time between the television screen and the GamePad screen.

Home Menu

The Home Menu (stylized as HOME Menu) can be accessed during any game or application through the user pressing the Home Button on the Wii U GamePad, Wii U Pro Controller or Wii Remote. The Home Menu allows the user to launch certain multitasking applications, such as Miiverse, Nintendo TVii, Nintendo eShop, Friend List and the Internet Browser while a game or application is running. It also displays various information such as date and time, the wireless signal status, number of friends online, controller battery life and controller settings. Current downloads can also be managed in the Download Manager, which downloads and installs games and applications and their

respective updates, as well as downloading system updates in the background.

Wii Mode

The Wii Mode is a fully virtual Wii system inside of the Wii U, with all of the limitations and privileges therein. When a Wii game disc is inserted into the Wii U, the system automatically launches the Wii Mode. The Wii Mode system memory is limited to 512 MB, just like the Wii system memory is. The SD Card Menu is also available on the Wii U's Wii Menu, just like it is on Wii, which an up to 32 GB SDHC card can be inserted into the system. There are a few slight differences, however. The Wii System Settings are not accessible, only the data management settings. Although the Wii Shop Channel is fully available, not all of the content is; the Netflix, Hulu Plus, and YouTube applications available on the Wii Shop Channel cannot be used on the Wii U.

TV Control

The Wii U GamePad has a "TV Control" feature that allows it to function as an infrared TV remote which allows the user conveniently change channels, adjust volume or browse a programming guide, even when the system is not powered on. It is compatible with most cable and satellite providers' set-top boxes and most TV brands. Functionality may vary by country.

Software and services

Nintendo Network

Nintendo Network is Nintendo's unified network infrastructure similar to the Sony's PlayStation Network and Microsoft's Xbox Live. Available on the Wii U and also on the Nintendo 3DS, Nintendo Network for the latter provides the means for online multiplayer, online leaderboards, video chatting (achieved by the using the Wii U Gamepad's built-in camera), as well as downloads and streaming media services. Nintendo Network on the Wii U uses a user account system much like the PlayStation Network and Xbox Live, called Nintendo Network ID. One Wii U system can contain up to twelve user accounts.[99] The user account system on the Wii U replaces the previous friend code model that was used on the original Wii, but does not eliminate use of friend codes on Wii games using the Wii Mode. The Nintendo Network administration team also has administrators to remove inappropriate content from its services, such as Miiverse.

SpotPass

Similar to Nintendo 3DS's more distinctly mobile SpotPass functionality, the Spotpass feature is an online utility which is built into the Wii U system. It allows the Wii U to automatically download available content via Wi-Fi in the background even when the Wii U is already running an application, or powered off in sleep mode. Content that can be downloaded via SpotPass includes full game and application downloads, firmware updates, patches, and specific in-game content. Content currently being downloaded can be viewed in the Download Manager, accessed via the Wii U's HOME Menu.

Nintendo eShop

Nintendo eShop is the Wii U's online distribution store. The eShop provides download-only Wii U titles, retail Wii U titles, Virtual Console titles, and various others applications. It will also allow users to purchase downloadable content (DLC) and to automatically download patches for both physical and downloadable games. Moreover, all content obtained from the Wii U's eShop is attached to a user account, and currently, they cannot be moved to other Wii U systems. Therefore if the console has issues in which require a replacement, purchased funds and licenses can only be transferred to a new console through Nintendo's customer support.

The Nintendo eShop is a multitasking application and can be accessed anytime via the Home Menu screen, even when a game or application is already running at the same time. Background downloading is also possible via SpotPass while playing games or using any other application such as Miiverse and the web browser. Currently, up to 10 downloads can be queued up at a time. The status of the downloads can be checked on the Home Menu under the Download Manager. If notifications are activated a pop-up message will appear in the top center corner of the screen to notify the user that a download is finished.

The eShop also supports user reviews of games, applications and other media. Users can submit a software review of with "stars" ranging from one to five, representing its quality in a crescent order. Users can also categorize games by age and gender and as suitable for hardcore or more casual gamers. These reviews can only be submitted after using the software at least one hour.

Miiverse

Main article: Miiverse

Miiverse

Miiverse, portmanteau of "Mii" and "Universe", is Wii U integrated communication system or social networking service, powered by the Nintendo Network, which allows players to interact and share their experiences through their own Miis. The Miiverse allows users to seamlessly share accomplishments, comments, and hand written notes with other users. It is integrated into the system menu of the Wii U via WaraWara Plaza, but social interactions can also occur within supported games. A user is able to suspend any game to access Miiverse functions, and then return to the game at the point it was left.

Nintendo has stated that Miiverse will be moderated through software filtering as well as a human resource team in order to ensure that the content shared by users is appropriate and that no spoilers are shared. In order to facilitate this, it was stated that comments posted could take up to 30 minutes to appear on Miiverse.[102] However, such delays have not been reported by users. From February 2013 the players under the age of 12 years are no longer allowed to directly send or receive friend requests within Miiverse.

On April 25, 2013, the Miiverse became available on every internet enabled smartphone, tablet and PC devices. It will also become available on the Nintendo 3DS later in the year.

Internet Browser

Main article: Internet Browser (Wii U)

Internet Browser

The Wii U also contains an internet browser which allows users to browse the web on the Wii U GamePad and/or the television screen. It functions as a multitasking app on the Wii U and can be used while another game or application is suspended in the background.[105] The browser is primarily controlled using the Wii U GamePad's touchscreen, or with the analog stick to scroll through web pages and the D-pad to cycle through links on the page, similarly to using a keyboard. It can play HTML 5 video and audio in websites such as YouTube and various other social media. The user can choose to hide the browser's view on the TV screen for privacy, which contains presentation effects such as the opening of stage curtains. The user can also choose between the Google and Yahoo! search engines. There is a text wrap option to automatically wrap text to the width of the screen at different zoom levels. Users can also create bookmarks, with each user having its own set of personal bookmarks. The browser also supports up to 6 tabs simultaneously. Up to 32 pages can be stored into the browser's history before the older items start being replaced.

Nintendo TVii

Main article: Nintendo TVii

Nintendo TVii

Nintendo TVii is a free television based service which allows users to find programs on Netflix, Hulu Plus, Amazon Instant Video, and on their cable network. Nintendo TVii also allows users to control their TiVo DVR through the Wii U. Users are then able to select the source of the program they wish to watch and watch it on their television or on the Wii U GamePad. By default, the GamePad screen shows information on the show currently being watched. This information includes reviews, screenshots, cast lists, trailers, and other general information about the show provided by Wikipedia, IMDb, Rotten Tomatoes, as well as other individual source services. Nintendo TVii also has a dedicated sports section where the user can view player positions and highlights of the match updated in real-time.

Each user has its own personalized settings on Nintendo TVii, such as their preferences, favorite shows and sports teams, personal Mii and social network account integration. Users can then interact with their friends and the community by sharing and commenting on reactions to live moments on the current show, on social networks such as Miiverse, Facebook, and Twitter, through the GamePad while they watch their show on the television screen.

The service is currently only available in selected regions. Nintendo TVii was made available with the Wii U's release in Japan on December 8, 2012. It was released in North America on December 20, 2012 and is scheduled to be released in Europe sometime in 2013.

Nintendo is also working with YouTube, LoveFilm (United Kingdom and Ireland only), Nico Nico Douga and YNN! (Japan only) to bring streaming movie and television content to the Wii U. Nintendo had initially delayed the deployment of some media capabilities for the Wii U as it delayed its online infrastructure. Late in the launch day, a firmware update deployed the Netflix app. Then, access to the Hulu Plus, Amazon Instant Video, and YouTube apps gradually became active later in the launch week.

Wii U Chat

Main article: [Wii U Chat](#)

Wii U Chat is Nintendo's online video chat solution, powered by the Nintendo Network. The service allows the users to use the Wii U GamePad's front-facing camera to video chat with registered friends. While video chatting, only the Wii U GamePad is essentially needed, since the application is compatible with Off-TV Play. Users can also draw on the GamePad during a chat session. If there is a game or another application already running, the GamePad's HOME button ring will flash indicating that there is an incoming call.

Loyalty programs

Nintendo currently offers two types of loyalty programs on the Wii U. The Nintendo Network Premium/Deluxe Digital Promotion, in which owners trade points for Nintendo eShop credit; and Club Nintendo in which owners trade points for special Nintendo merchandising.

Nintendo Network Premium

Nintendo Network Premium in Europe, Australia and Japan, or Deluxe Digital Promotion in North America, is a loyalty program similar to PlayStation Plus offered on PlayStation Network. Consumers who purchase the Wii U Deluxe Pack (North America) / Premium Pack (Europe and Japan) will receive a free two-year subscription to this service which lets Wii U owners receive points for each download purchase. Members who buy games and apps through the Wii U Nintendo eShop will receive ten percent of the price back in the form of Nintendo Points, which can subsequently be put towards future online purchases on both the Wii U's and Nintendo 3DS's eShop. The promotion is currently planned through December 2014, with any future plans to be revealed at a later date.

Club Nintendo

Main article: [Club Nintendo](#)

Club Nintendo is a loyalty program in which users register purchased Nintendo products in order to exchange them for a variety of unique rewards. Once linked to Club Nintendo, every product downloaded through the eShop is automatically registered in the Club Nintendo account. The user can also then take a survey for each product registered to earn additional coins/stars, which then prizes can be redeemed.

Games

Trine 2: Director's Cut was a North American and European launch title on the eShop. This scene from the Dwarven Caverns chapter is exclusive to the Wii U version.

Main articles: [List of Wii U games](#) and [Wii U Download Software](#)

The Wii U was launched with 29 games in North America on November 18, 26 games in Europe and 25 games in Australia on November 30, and 11 games in Japan on December 8, 2012. Download-only games via Nintendo eShop were also available on launch day for the Wii U in North America, Europe, and Australia. Titles developed or published by Nintendo that were released alongside the Wii U's launch or early in its lifespan include Nintendo Land, New Super Mario Bros. U and Lego City Undercover, Third-party "launch window titles" include Darksiders II, Assassin's Creed III, Mass Effect 3, Ninja Gaiden 3: Razor's Edge, Batman: Arkham City Armored Edition, Just Dance 4, Madden NFL 13, and Scribblenauts Unlimited, as well as exclusives such as ZombiU and Rabbids Land.

In an effort to improve sales after the initial six months in the console's lifespan, Nintendo has released a variety of games during the rest of year such as Game & Wario and Pikmin 3, and they currently plan to include, The Wonderful 101, The Legend Of Zelda: The Wind Waker HD, Wii Party U, Donkey Kong Country: Tropical Freeze, Super Mario 3D World and Wii Fit U. In 2014, Nintendo plans to release Mario Kart 8, Bayonetta 2 and a new entry in the Super Smash Bros. series.

Off-TV Play

Main article: [Off-TV Play](#)

The Off-TV Play feature lets the user play games only on the Wii U GamePad controller using its embedded touch-screen, without the need for the television to be powered on. This feature is available on certain games only.

Asymmetric gameplay

Main article: [Asymmetric gameplay](#)

Asymmetric gameplay is a form of multiplayer in video games in which multiple players can play the same game simultaneously in different ways and rules. For example, one players is playing the same game with different gameplay mechanics and rules on the Wii U GamePad's screen while the rest of the players are playing the same

game with different gameplay mechanics and rules on the television screen. This feature is a major component of various Wii U games such as Nintendo Land and New Super Mario Bros. U.

Multiple screen multiplayer mode is also an unique feature of Wii U. It works like a traditional split-screen mode without the need for an actual split screen. The Wii U GamePad and the TV function as the separate screens in this scenario, offering each player a full screen experience to themselves. Compared to Ad-hoc multiplayer, multiple screen multiplayer works on the same console and does not need two independent systems and multiple copies of the game.

Virtual Console

Main article: Virtual Console

In January 2013, Nintendo announced that NES and Super NES titles would be made available for the Virtual Console service on the Wii U in April 2013 and would include the option to use Off-TV Play on the Wii U Gamepad and the ability to post on Miiverse dedicated communities. Game Boy Advance and Nintendo 64 titles will also be made available at a later date.

Backward compatibility

The Wii U is compatible with most Wii games, both on disc and download. Wii accessories such as the Wii Remote (Plus), Wii Nunchuk, and the Wii Balance Board also remain compatible. It is also possible to move most downloaded software and save files from the Wii to the Wii U. While original Wii games are playable on the Wii U system, they cannot be played on the GamePad screen.

Despite the Wii's general compatibility with GameCube games, the Wii U is not compatible with GameCube discs or accessories, although Nintendo has stated that some GameCube games will be available as Virtual Console titles through the Nintendo eShop.

Reception

The Wii U received mixed reviews. John Teti of The A.V. Club's Gameological Society considers the Wii U a compelling video game system which lacks focus, citing Nintendo Land as "ideas act[ing] in service of the technology" simply to show off features of the console. Ben Gilbert of Engadget states that Nintendo delivers on its promise of releasing "a modern HD gaming console," but notes that, "there are also some major missteps and half-baked ideas: a befuddling Friends List / Miiverse connection, a complete lack of many system-wide console standards (group chat, achievements, the ability to play non-game disc-based media) and a game controller that lasts only 3.5 hours," and stated that he could not give a complete assessment of the console with online components such as Nintendo TVii missing at launch time. Similarly, TechRadar praised the system's GamePad functionality and HD graphics, but criticized the limited battery power for the GamePad, and that there was not much of a system selling game around its launch period. Some industry figures have claimed that the Wii U is not an 8th generation console, with many citing the hardware as the reason. Reggie Fils-Aime, COO of Nintendo of America, however, has noted that similar comments were made in 2006 when the Wii first launched.

By May 2013, Electronic Arts announced that they were dialing back support for the console and had no games in development for it at the time, however they partially reconsidered this decision a few days later, with EA's CFO announcing that "We are building titles for the Nintendo console, but not anywhere near as many as we are for PS or Xbox". At E3 2013, Ubisoft revealed that they were not going to make any more exclusives for the Wii U until sales of the console improved, though they stated shortly after that they are still "big supporters" of the Wii U, and plan to release as many Wii U games in 2013 as they did in 2012. Bethesda Softworks has announced that as of July 2013 they have no games in development for the Wii U, with Bethesda VP of PR and marketing Pete Hines explaining the decision: "It depends on the games that we are making and how we think it aligns with that console, and how the hardware aligns with the other stuff we are making". This explanation was later refined to being largely due to the hardware. Contrarily, Activision has stated that they will "do everything they can" to support the system and would continue to develop games for it.

Sales

Life-to-date number of units shipped, in millions Date Japan America Other Total Increase

2012-12-31 0.83 1.32 0.90 3.06 N/A

2013-03-31 0.92 1.52 1.01 3.45 12.7 %

2013-06-30 1.01 1.58 1.02 3.61 4.6 %

As of 30 June 2013, Nintendo reports 3.61 million units have been shipped worldwide.

During its first week of release in the United States, Nintendo sold its entire allotment of over 400,000 Wii U units[141] and sold a total of 425,000 units for the month of November, according to the NPD Group.[142] It also sold over 40,000 consoles in the UK in its first weekend.[143] In Japan, over 600,000 Wii U units were sold during December 2012.[144] According to the NPD Group, nearly 890,000 Nintendo Wii U units have been sold in the United States after 41 days on the market. [141] In the three months leading up to June 2013 it sold 160,000 units, which was down 51 % from the three months prior.

In January 2013, the Wii U sold 57,000 units in the US. By comparison, the original Wii sold 435,000 in January 2007, also two months after launch. Initial sales numbers in the US and other territories were lower than expected, resulting in Nintendo cutting sales projections for fiscal year 2013 by 17 percent, from 5.5 million to 4 million; the system actually ended up selling 3.5 million units. This has left some critics questioning the future of Nintendo, describing the Wii U as putting Nintendo in "trouble" and suggesting that Nintendo possibly should move out of the hardware sector. At the end of July 2013, Walmart subsidiary Asda, the second-largest supermarket chain in the UK, confirmed that they had no plans to stock the Wii U, but would still stock games "on a title by title merit basis". Despite this, many specialist retailers continued to emphasize their support, with Game CEO Martyn Gibbs saying "We fully support all Nintendo products, including Wii U."

Games Will Be The Reason Wii U Wins Next Generation (2012-11-13 01:06)

With The Wii U a little under a month away now, many gamers are anticipating the launch of Nintendos next generation console. With pre-orders sold out, and a slew of fantastic launch titles to pick from, Nintendo finds themselves in a much better situation with the Wii U launch, than the 3DS launch over a year ago. There has been growing concern among some gamers about the longevity of the Wii U graphics and will it be able to stand up against the PS4 and 720? Wii U doesnt have to compete graphically with the 720 and PS4. It just has to have fantastic games that appeal to all types of gamers. And Nintendo has proven they can definitely do that.

Games have always sold any piece of hardware no matter how weak or powerful the console is. Nintendo understands the essence of gaming. Nintendo knows gameplay is king. Whether your playing Metroid Prime or Mario Galaxy, Nintendos core franchises seem to deliver time and time again, even after all these years. Nintendos range of IPs in

different genres has been key to their success over the past three decades. Want a hardcore strategy rpg? Check out Fire Emblem on the GBA, Gamecube, or Wii. Want a fun party game? Mario Kart and Mario Party can do the trick. Want to blast somebody, jump on a goombas head, or play a puzzle-twitch based boxing game? Nintendo has Metroid, Mario, and Punch Out to suit those needs. Want to get a workout in? Wii Fit for soccer moms and casuals alike. Nintendos games stand the test of time, yet innovate in their own ways with each new release. With the Wii U, Nintendos IPs are bound take the industry and sales charts by storm. There are some gamers who feel the casuals wont jump on the bandwagon like they did with the Wii. While I cant say for sure this isnt true, I think Nintendo will give plenty of casuals reasons to pick up the Wii U. Games like Just Dance 4, Wii Fit U, and New Super Mario Bros have proven to be bonafide system sellers. There is no reason to believe casuals wont want more Wii Fit and Just Dance 4. Nintendo can always Repackage Wii Sports, slap HD on there, add some new games, and release that, which is highly likely based on their E3 Wii U videos.

With the soaring costs of development on current generation consoles, many developers will opt to develop their games on the cheaper Wii U console. This is already happening in Japan, with previous Sony exclusives like Monster Hunter and Dragon Quest moving over to Nintendo. Microsoft and Sony need to be really careful about how much power they put into their systems. The 360 and the PS3 had system problems due to overheating. Of course Microsofts red ring of death was far more prevalent, but the yellow light of death struck a lot of PS3s as well. The Wii U has been confirmed to have some solid heat sink technology. Nintendo could have the most reliable next generation system, which could of course affect sales in a positive light for Nintendo.

Xbox Live is awesome, PSN is solid, Blue Ray playback is useful, apps are handy, DVD playback helps, but in the end, its the games that decide the next generation battle. Games sell consoles and Nintendos games sell the best. Microsoft and Sony dont have one exclusive IP that can put up the numbers New Super Mario Bros or Wii Fit put up. Halo can get up there, but no cigar. Nintendo has Mario, Mario Kart, Super Smash Bros, The Legend of Zelda, Animal Crossing, and Pokémon. Between these five franchises Nintendo sold a staggering 144 million units this generation! This is leaving off games like Wii Sports Resort, Wii Fit, Wii Sports, Wii Play, and Donkey Kong Country Returns. As of now, Microsoft and Sony have better 3rd party support. But the Wii U is fast gaining 3rd party supporters. Square Enix, EA, Ubisoft, Warner Bros, Gearbox, and many other companies are looking to put their games on Wii U.

Nintendo is doing a fantastic job at snagging up some non-traditional exclusives like Lego City Undercover, Bayonetta 2, The Wonderful 101, and Rayman Legends. Sony has Killzone, Resistance, Uncharted, The Last of Us, Ratchet & Clank, Sly Cooper, Starhawk, and a few others but none of those games have the mass console selling power like New Super Mario Bros or Smash Bros. Microsoft has Xbox Live, Halo, Kinect, and Gears of War, but they are going to need more than that to beat the Wii U. Especially because you have to pay for Xbox Live and Kinect is not that popular with core gamers. Nintendo has the franchises that people buy to win the console war. Nintendo has the Wii U Gamepad that can reinvent games like Animal Crossing, Pokémon, Wii Fit, and Zelda. Industry analysts like Pachter think differently than me but lets be honest here, Pachter was dead wrong about the Wii and 3DS. I say, lets wait and see, because Nintendo proved industry analysts wrong with the Wii and are proving them wrong with the 3DS. The Japanese 3DS sales are skyrocketing due to fantastic software like Project X Zone, Bravely Default Flying Fairy, Monster Hunter 3G, and New Super Mario Bros 2. Wait till Nintendo releases the Pokémon game on 3DS that links up with a Wii U version of the same game. Yes, that will happen, mark my words.

The Wii U might not match the sales of the Wii, but if Nintendo plays their card right, Nintendo should sell a ton of Wii Us. The Wii U has excellent 3rd party support, Nintendos classic 1st party titles, and a versatile/robust system that gives developers enough power to deliver awesome games while not breaking the bank. I feel a lot of people are selling the Wii U short. Nintendo still has some tricks up their sleeves. Remember, two Gamepad play is coming next year. That could create more new gameplay options on top of what the Wii U already offers. The Wii U is poised to win the next generation war, but like all previous console wars were going to have to have a wait and play approach.

Bought a Wii U on Launch day (2012-11-18 06:23)

IFRAME: <http://www.youtube.com/embed/iwC6j1AvlTo?fs=1>

picked up a Wii U at Wal-mart at 12:20 AM + Mario Bros. U. I had a lot of stuff to do. I couldn't find a Deluxe. Wii U should allow you to install games on encrypted SD cards anyhow! I bought a 64 GB SD Card.

Now I am fully next generation. I didn't pick up a console at the release date since 9/9/1999 for Sega Dreamcast. I was at the Xbox 360 and PS3 launches at midnight (@ Wal-Mart 2005 and 2006) and didn't buy. They all say Wii U deluxe all spoken for. Amazon, the Deluxe cost \$750. Since Rayman Legends is not a launch title (oh snap!), in that New Super Mario Bros. U claims victory. I made this mp4 with my Cisco Flip Video and went to bed with the greatest heavy metal song ever. I don't know if Metallica's best song is Enter Sandman or Master of Puppets, so I made an educated guess with help of child memories. My professional speaker skills stink so I subtitled the video. Thanks for watching.

You can see for what reason I actually recommend from co-signing regarding financial products. It is a failure hanging around to happen. Nevertheless able to [\[url=http://kredytbezbiku.edu.pl\]](http://kredytbezbiku.edu.pl)szybkie kredyty katowice~~[/del]~~ cash advance loan assist firms might not exactly give you just what people guarantee.

A new payday loan is usually a short-term mortgage using increased rates that a great many individuals guarantee when they believe it is the answer [\[url=http://pozyczkibezbik24.org.pl\]](http://pozyczkibezbik24.org.pl)pożyczki bez bik~~[/del]~~ for an prompt condition. The loan might possibly mask or put off the afternoon for reckoning, though it's often all the worst achievable answer. A good number of fiscal loans are usually rolled across sometimes because the borrower doesn't have plenty of finances to cover this monthly bills. It can be a vicious, high priced menstrual cycle which may be extremely hard to fix in addition to can cause enormous budgetary trouble for lots of individuals.

Your own collector is usually best suited, in addition. The actual mortgage assist firm will endeavour to settle your cash advances intended for your balance. Although unless it can be profitable (and also the tremendous the greater part will not be) you'll keep on to cope with the actual violent arranged work within the lender. And sending the cease-and-desist page will not avoid range initiatives. This Acceptable Commercial collection agency Strategies Function forbids [\[url=http://kredytbezbik24.net.pl\]](http://kredytbezbik24.net.pl)kredyt y bez zaświadczeń zus~~[/del]~~ loan companies via get in touch with you actually once you transmit a good note inquiring it. However they yet could possibly file a suit you will around ct.

Here are great information: My spouse and i do not traditionally highly recommend taking up to be able to step out of debt,

but some sort of debt consolidation financial loan could be a great way for everyone. They allow you to pay your debts [url=http://pozyczkabebik24.info.pl]zobacz adres naszej strony internetowej[/url] outright. In return for, you'd be better with was required to give monthly premiums with a completely new lender. These obligations would probably preferably come to be on a smaller interest utilizing less costs.

Just before signing up with some sort of amalgamation bank loan, ensure you learn the interest fee, fees and penalties just for not so great payments. You'll find that you need to show you may have sufficient earnings to help make any installments. Still, in place of featuring which usually explanation your own self, It's best to request your companion to be able to come to the party and even take on task in this financial debt. He or she ought to have treated [url=http://kredytbezbiku.edu.pl]strona główna[/url] that right from the start. At long last, I would think more effective any time you needed a good relief loan coming from a famous bank for instance a bank or investment company or perhaps consumer credit rating nation.

In the event that my personal followers tend to be significantly bearing in mind an online payday loan, I propose that they more than require pożyczka przez internet z komornikiem any safety measure from by using a loan company which is a member of the actual, whose subscribers sign up to several market guidelines.

Beyond the B2

The youngest active stealth bomber in the U.S. turns 15 this year, and the other 19 B-2s in the Air Force fleet are nearly five years older. Meanwhile, the integrated defense systems they face have become much more sophisticated. Multi-static radar, which is now relatively common, is so sensitive that it can detect certain stealth craft. To stay ahead of such defense systems, the Air Force has budgeted \$3.7 billion over the next five years to develop a successor to the B-2 that could be active by 2020. Actual designs of the new bomber are classified, but some secrets are already out.

Patents and bid proposals from Northrop Grumman, maker of the B-2, suggest that the new bomber will be narrower than the B-2 but maintain the familiar flying wing design, which reduces radar reflection by minimizing hard edges. Engineers are also testing new types of radar-absorbing coatings that could be customized to individual defense systems. And so a picture of the next generation of stealth bombers is beginning to emerge.

CUSTOM COATINGS

Most stealth coatings consist of a radar-absorbing material, typically a form of iron, suspended in paint. But they are heavy (which lowers fuel efficiency), need to be reapplied frequently, and don't absorb all radar frequencies. Ceno Technologies, a particles-science company in Sanborn, New York, has developed a lighter, more durable coating that uses hollow ceramic spheres, called cenospheres. Because the spheres can be covered in carbon, silver or other metals that absorb slightly different wavelengths of radar, the coating can be customized to deceive specific radar systems.

SMOOTHER SHAPE

The B-2 has two semi-flush air-intake vents, the hard edges of which can reflect radar. In one design seen in a patent from Northrop Grumman, the new bomber has four small vents rather than two large ones. The smaller vents can be buried more deeply in the wing, reducing the possibility of radar returns.

SMARTER DECOYS

To confuse radar defense systems, the new bomber will probably carry something like the Miniature Air Launched Decoy made by Raytheon. The modified drones use radar reflectors to create bomber-like signatures that divert attention from the actual bomber. The decoys fly on a preprogrammed course for up to 575 miles and may carry radar jammers to further confuse air defenses.

RETRACTABLE WING

In one design from Northrop Grumman, engineers included a canard wing on the plane's nose, which would provide extra lift during takeoff and flight, allowing a smaller bomber to carry a heavier weapons payload. Because its straight lines and hard angles would reflect radar, the canard wing will most likely be designed to fold flush with the bomber's body as the craft comes within range of defense systems.

HEAVIER WEAPONS

The new bomber will most likely have a single weapons bay, as opposed to the twin bays on the B-2. It will still be able to carry conventional GPS-guided JDAM missiles, nuclear warheads and even the new 30,000-pound, bunker-busting Massive Ordnance Penetrator, but a single bay would reduce the cost of manufacturing—a major concern for designers on a relatively tight budget.

I'm amazed, I must say. Seldom do I come across a blog that's both equally educative and interesting, and let me tell you, you have hit the nail on the head.

The issue is an issue that not enough men and women are speaking intelligently about.

Now i'm very happy I came across this during my search for something relating to this.

Lutheran churches stood against Nazis and Stalinists (2012-12-12 18:11)

Lutheran churches in Germany were among the only institutions to stand against Nazis in the 1940s. For this reason they were left intact when the Stalinists took over. And forty years later, the Lutheran churches of East Germany were prominent in the crumbling of Stalinism. The revolutions of 1989 throughout the East Bloc were Lutheran revolutions – from the epicenter in Bach's church in East Germany to the uprising in Timisoara – all of these began in Lutheran churches. How accurate is Rorty's notion of Nazis and Christians being identical?

There is nothing of DLC that I really need. DLC is a waste of money. PC Expansion packs are more worth it like RPGs Nightwinter Nights, Neverwinter Nights 2, Diablo 2, Elder Scrolls III, Elder Scrolls IV and first person shooters like Half-life 2, These expansion packs offered more for the money and they came in a box!

Now expansion packs are changed to DLC and are on consoles. I am not buying an DLC for consoles, because I don't rebuy games with DLC content nor do I own expansion packs for console. I don't know if PC is nichie like Sega Saturn or Dreamcast.

This DLC is moron. I do not buy the same game across two console platforms. That's moron. Who has that kind of money? I normally buy one version for PC and then one version for console without PC expansion packs.

I think I have enough PC games. Guild Wars 2 might be my last PC game for at least 24 months. I have no idea what is happening for PC. I know Nvidia and Radeon release new GPUs like clockwork and then new PC games use 5 year old game engines. I don't know if PC is dead or why there aren't many DirectX 11 games? Maybe next gen will solve the DirectX 11 void on PC???

They didn't wipe PC games off Wal-Mart or Target or Best Buy so PC is not yet Commodore Amiga.

Installed Linux Mint 14.1 (2012-12-14 02:53)

This is Linux Mint 14.1 Mate with Mate 1.4. Mate 1.4 fixes ancient Gnome 2.32.2 glitches. I got 1.0. of Mint Display Manager and openDNS. Linux Mint 14 Mate is as always more stable than Cinnamon. Bluetooth is functional. Mint-Stick replaces USB-ImageWriter, for a better UI and better progress reporting. Gedit 2.30 replaced Gedit 3. It's a more mature/stable alternative, which provides more features and a much better search functionality than the latter version. MATE now includes its own character map, fast alt-tabbing with Marco compositing, a selection of notification styles (although this was included in Linux Mint 13, it wasn't part of MATE 1.2), and Caja improvements such as a toggle button to show and edit the path and a new button to compare files in the file conflict dialog. Ext4 can now add CRC32 checksums to many parts of its metadata and use them to reveal corruptions. The Brcmfmac Broadcom WLAN driver now works with the Bcm43235/6/8 USB chips, while the rt2x00 Ralink driver, starting with 3.4, supports the RT5372 WLAN chipset.

Shining Force III, Shining the Holy Ark, and Twinkle Tale (2012-12-19 22:53)

Shining Force III - I had Panzer Dragoon Saga for 18 months now and I love it dearly. Panzer Dragoon saga is the greatest game nobody has played. Shining Force III takes 10 years after Shining the Darkness and is supposed to end the old school series. Sega published sequels like Shining Tears for PS2 that "Genesis era gameplay" in late in the PS2 era. The Sega Saturn controller didn't have a joystick so it was heavily Genesis 6 button controller based. Sega Saturn had a Nights 3D controller, but a handfull of games supported the "Nights 3D controller". I own three Saturn 3D controllers. Shining Force III would play a lot like Golden Sun and Golden Sun 2 for GBA.

Shining The Holy Ark - I just bought this a day ago. Direct prequel to Shining Force III. For Sega Saturn, Shining Wisdom was the direct storyline sequel to Genesis Shining Force II. Shiing The Holy Ark was direct sequel to Shining Wisdom. It's 3D and plays a lot like Shining of the Darkness for Sega Genesis. My theory even more bizzare. My theory is Camelot Game Planning noticed **Elder Scrolls II - Daggerfall** in development for PC and was eager to develop a Sega Saturn equivelant. Elder Scrolls must've been as hyped as it is now.

Twinkle Tale - Now you should know how Gleylancer was medicore and Americans didn't import it? Like Eliminate Down, a SHMUP with a highest possible score of 10/10, Twinkle Tale is another SHMUP that could get 9.0+ review score. Twinkle Tale is a lot like Contra Shattered Soldier for PS2 (the hardest USA PS2 title). It had to be a reproduction cart to fit inside my Sega Genesis. I played the cart, it is as hard as Eliminate Down. Twinkle Tale can be summed up as Contra Shattered Soldier without the blood and gore .

Christmas 2012 (2012-12-25 05:54)

I listed my parents to buy a Nikon D5200 with Exceed 3, yet I got a D7000 with an Exceed 2. Exceed 3 has a 24 Megapixel sensor. I realize that I could've imported a D5200 from Hong Kong. I suppose I can trade the D7000 in for a D8000 (with Exceed 3) next Christmas. It's a disaster, nobody sold the D5200 on Amazon this December. It comes out next month.

D5200 is superior to D7000 in mass majority of ways.
Much higher true resolution **24 MP** vs **16.1 MP**

Capture around 50 % more detail in your photos
Has in-camera HDR **Yes** vs **No**

Combines multiple exposures to capture high dynamic range
Can create panoramas in-camera **Yes** vs **No**

Stitches together multiple photos for a wide perspective
Has a flip-out screen **Yes** vs **No**

Flip-out screens can be helpful when composing tricky shots or taking movies
Significantly lighter **555 g** vs **780 g**

Around 30 % lighter
Smaller **129x98x78 mm** vs **132x105x77 mm**

Around 10 % smaller

I am going to take box-art screenshots with this D7000. I don't have Lightshow 4.0, but I have registered copy of AKVIS Enhancer for Photoshop CS4 which a lot better. AKVIS Enhancer will make the D7000 appear as D5200 in image quality.

Just take it for granted that this takes amazing pictures under all conditions, including low light, and that it contains all the manual controls that you'd ever want. Instead, here's some things that the camera does that you might not have heard about:

- * **Built-in EyeFi support** If you've used EyeFi SD cards before, you probably assumed that it would work with the D7000, since the D7000 now uses SD cards instead of CF. But not only do you not have to mess around with SD-to-CF adapters, the camera is actually EyeFi aware— you can choose to have it upload or not upload on a slot-by-slot basis (so you might have it automatically upload the RAW files you saved to an EyeFi Pro card in slot 1, but not bother to upload the JPEGs you saved to the EyeFi Explorer card in slot 2), and there is also an icon that appears on the Info display to indicate that there are files waiting to upload, that the upload is in progress or disabled, etc. The Nikon Wifi adapter is going for \$400. A 4GB, class 6 EyeFi card goes for \$40. If you really want to move RAW files, snag the Pro version for \$80. Yes, the Nikon adapter does things that EyeFi can't, but if you just want to get your files onto a PC without pulling the card, why spend 10X the money? You're stuck with the usual limitations of the EyeFi card, but I fully expect to use this feature a LOT with studio portraits— yeah, it only takes 10 seconds to pull the card and have Windows recognize that you added it, then another 5 seconds to eject the card and stick it back in the camera. But if you just want a quick check that your exposure or focus is where you want it, wouldn't you rather just hit a single key and see your last shot, then get right back into the flow? You may want to drop your JPEG file sizes to speed up the transfer.
- * **In-camera RAW file processing** The camera contains a ton of built-in settings— in addition to the basics like Standard, Normal, Landscape, etc, you also get all the various Scene modes, which are basically variations on those main settings. RAW processing allows you to see how the shot would have looked had you used one of those other modes. In other words, you shoot in Normal, which basically applies no processing to the image, then select the RAW file, and choose how you'd like to adjust it. You can change the white balance settings, exposure, basic picture setting (landscape, portrait, etc), noise reduction, color space, and dynamic lighting. With the exception of the advanced details on the basic picture settings, you see a preview of how your change will affect the picture. If you like it, just hit EXecute and it writes out a JPEG to your card. Don't like it, just back out and nothing's saved. This means that you don't have to worry that shooting in Vivid is going to result in an oversaturated image, or you can punch something up even more after the fact. The only real drawback here to me is that it is going to kick out a JPEG, so if you're planning on doing further editing in Photoshop, this may not be the best route. But if you're just looking to go right from the camera to the web, or want to get an idea of how playing with custom settings will affect your shots, this is a massive shortcut to taking and then deleting a ton of shots. (And keep in mind that Photoshop will allow you to mess with most of these settings when importing RAW files anyway, and the plugin D7000-compatible RAW plugin had a

release candidate posted yesterday, so you can finally open your RAW shots.) And a related feature that's in most other Nikons, but that you might not know about- you can define your own basic picture settings. Want something that's super-saturated and super-contrasty? Just hit a few buttons, choose a name, and you're done. On the older Nikons, you had to edit the basic profile itself, now, you can use one as a starting point and adjust from there. Much cleaner. * User-defined settings on the control knob Not as hidden as the first two, but I can't emphasize how cool this feature is. Here's the situation I was in last night- I was shooting a singing contest in a dimly-lit venue. I was allowed to use a flash, but I didn't want to constantly be blasting the singers while they were performing. I defined one setting as shutter priority, 1/60th, ISO Hi 2, center-weighted metering & focus, no flash. The second setting was automatic, ISO auto, full metering and autofocus, flash enabled. I'd take a couple shots in U2 with the flash, close the flash down and switch to U1 and shoot a half a dozen shots, then switch back to U2 and use the flash for a couple more shots. There was no fumbling for controls, no worrying that I changed the shutter speed without realizing it when changing between Auto and S- every time I went from U2 to U1, all my settings were reset to where I put them before the event started. I don't think I ever felt as confident about my camera settings in a rapidly changing situation as I did last night- with just a simple twist of a knob, I was able to change to a completely different shooting configuration with absolute confidence that it was what I wanted. To me, the utility of this is almost endless- I'll probably set up one setting for studio portraits, and the other for landscape stuff. If I was still shooting news, I'd probably be swapping between flash and no-flash configurations. For sports, I'd change between action modes and post-game portraits. The only thing that would make this even better would be if I could import and export settings for later use- even if you use the "Save/Load" settings option to back up your current configuration to a memory card, it doesn't appear that this information is stored. However, it may be a bug in the Load settings feature, as a number of my settings were incorrectly reset when I tried to load in settings. Either way, it would work better if I could treat these like custom basic picture settings, saving them by name and loading them at will. * Built-in interval timer shooting Want to take time-lapse pictures? Just set up your camera on the tripod, specify when you want it to start, how many pictures to take overall, and how many pictures to take each interval and walk away. When it's time to start taking pictures, the camera will automatically focus and shoot, then go back to waiting for the next shot. No messing around with tethering, 3rd party software, whatever- it's all in the camera, and it's all super-easy to set up. You'll find yourself taking pictures of your living room just to see what your cat actually does all day while you're at work. * Zoom in live view This might just be "new to me," but I found it to be very cool for manually adjusting focus when on a tripod- frame your basic shot, then change to live view. From there, zoom in with the magnifying glass key, and move around the image with the navigation pad until you find the point you want to focus on, then manually focus. Since you can zoom into a tiny portion of the overall image, you can see that you're getting exactly the focus point you want before you take the shot. One gotcha that I always forget, though- don't forget to pick your aperture BEFORE going into live view, as you can't change it once live view has started. * Adjustable shooting rate Again, might be "new to me," but in addition to blasting away at 6fps, you can manually adjust that from 1 to 5 FPS in order to get a different effect. You obviously need to be using a fast enough shutter speed to support your choice- if you're at 1/2 a second, you're not going to shoot faster than 2FPS. As I mentioned in one of my other reviews, I used to be a semi-pro photographer- I was the photo editor for both a weekly and a daily paper, I've shot tons of sports and news photos, and landscape photography is my hobby. I've recently gotten back into portrait photography as well. While I never owned as many cameras as a true pro would have (that semi- means that I never made enough money at it to be able to really spring for equipment), I have shot with a lot of other people's equipment, and I can honestly say that this is the best camera I've ever used.

Solution to Internet Explorer (2013-01-12 08:07)

Does your Internet Explorer always fail you? Cannot open a tab, and cannot download anything. If I do IE crashes and the tab switches to a message that says, "Internet Explorer has closed this webpage to help protect your computer." Open up a command prompt and type ftp releases.mozilla.org and hit enter. It'll ask you for a user name, which is anonymous, and a password which you can just leave blank. You should now have an ftp prompt.

Now you'll need to change the directory to the one that contains the firefox installer we want. To do this, type cd pub/mozilla.org/firefox/releases/18.0/win32/en-US and hit enter (or if you want a different localisation change the en-US bit).

Now we tell the client we want to grab a binary file, simply by using the binary command. We then change the local directory the client will download the file to, which we do by entering lcd C:\ (or wherever you want to put the file). Oh, and we're also going to want to know that the file is downloading, so use the hash command to instruct the client to print a # for every 2048 bytes (which will fill your command prompt with 3600 or so hashes).

All we have to do now is grab the firefox installer, which we do by typing get "Firefox Setup 18.0.exe" and watch your

screen slowly fill with # symbols.

It'll let you know once the file is complete, and once it is simply type quit to close the connection and exit the ftp client.

How Generation Z screws Generation Y: Insider information (2013-01-15 10:48)

At this point, the oldest in Generation Z are just turning 13, and we have enough information about the two demographics to predict what will happen. Aside from my case of schadenfreude, I'm particularly interested in Generation Z because my sons are smack in the middle of it. But also I'm interested because if we understand the impact the next generation will have on the workforce, we're better able to adapt our own careers for it. So get ready:

1. In generational conflict Generation Y will hide.

All generations have conflict between each other. But conflict is really bad for Generation Y because they hate conflict. They are the generation that moves home with their parents because they get along so well, and they apologize for quitting because they can't cope with disappointing their boss. Generation Y is sunny, upbeat, and non-confrontational. Which means that Generation Z, raised by pragmatic, confrontational Gen X parents, will think Gen Y are lame. Weak. Delusional. (Which are the negative traits of kind and non-confrontational.)

2. Gen Z will lead Gen Y almost immediately.

Gen Y hates to stand out. Their idea of leadership is leading from the middle. Or pretending people don't like leaders. This has not been a problem for them because Gen X doesn't want to lead. Gen X just want to go home to their kids. So the only people providing top-down leadership at work right now are Baby Boomers who refuse to retire and exist miles and miles from the cutting edge of everything except the new retirement.

So there will be a power vacuum when Gen Z enters the workforce, and they will take it over very quickly. All they'll need to do is say, "I want to lead." No one will challenge them. And, conveniently, Strauss and Howe point out that generational tendencies are cyclical, and Generation Z is poised to lead. They grew up in a time of turmoil: economic demise, war, rampant, random shootings. Generation Z will take charge, create stability, keep everything in line.

3. The passion problem will be passe.

Gen Y is immobilized by their need to "do what they love". Their Boomer parents instilled in them the fairy tale idea that passion should guide what they do. But Baby Boomers have never had this, except when they were unemployed at Woodstock, and their impractical, dreamer career advice has left their kids unable to make decisions. Gen Y has a passion problem. But this will end when Gen Z comes on board.

First of all, Generation Z will be the education generation. They will have been homeschooled at a rate we have never seen before, so they will be great at identifying what they like. Generation Y, on the other hand, was schooled by teachers who told them what to study to ace the test, and parents hired tutors to help, which means Gen Y is particularly good at taking tests and bad at figuring out what they like. Generation Z will fill the gap and simply tell Generation Y what to do.

Generation Z will give meaning to work in a way that Gen Y has talked about but has been incapable of achieving. Work will be about creating a national sense of stability. Work will be about helping families to adjust to the new economic realities. Work will be about helping people build new paths through adulthood that do not focus on the corporation. Gen Z has been priming for this their whole lives, with their counter-culture, Gen X parents.

4. Gen Z will out-communicate Gen Y.

Right now, Gen Y are the best communicators at work. They are the first generation to be taught social skills at work, and they are genuinely kind and concerned about people. Additionally Gen Y are the first generation who grew up writing for a massive audience, even as kids, and they are the generation with the best writing skills in history.

This will all seem old-fashioned, though, when Gen Z is on the scene. Gen Z communicates largely through video. They use YouTube like it's Google. For example, when they want to know how to beat a video game, they search online for a video to tell them: no reading.

Teenaged boys are giving video game lectures to thousands of other kids. Teenaged girls are political activists who have their own video platform before they're thirteen years old. The poise Gen Z has in front of the camera will trans-

late to workplace confidence and charisma. This will be the age of verbal communication rather than written, and Gen Z will shine.

5. Gen Z will force Gen Y to live more in reality.

Gen Y's obsession with travel is rooted in their acute need to feel special and different and document it in a way their friends approve of. Also, Gen Y has no money, so they are forced to say they value experience above possessions since they can't afford possessions beyond their de rigueur Apple equipment and marked-down high-end purchases they self-define with.

Jan Chipchase is a great example of the travel-is-everything mentality; he does brag tweets about his job that is nearly 100 % travel. Another example: Gen Y brides who forgo the wedding and just splurge on a big trip and a photographer to document the dress in an exotic location. Gen Y lives on Facebook and Instagram, and their reality is whatever is in the photo.

Generation Z is over the photography thing already. Every gadget they have has a camera. Their parents have documented their every move, and they are expecting to have no disposable income, so they won't need to post photos justifying their existence.

So Gen Z will shine a light on Gen Y and expose a lot that Gen Y hasn't seen before. But the truth is that every generation keeps the generation before them more honest. In the end, I'm grateful for the Gen Yers who worked with me, and forced me to see myself differently. I am less cynical and more sunny because I was surrounded by Gen Yers.

And they will be better, too, once they get over the shock of someone younger than them in the mix.

How Generation Z will screw Generation Y: Episode II (2013-01-15 11:41)

As a history student in college (history of political thought, for all you fans of the Republic) and still an obsessive researcher of generational demographic trends (everyone should start with Strauss & Howe) I understand that to study history (contemporary or ancient), you must study generational shifts in thinking, because the way the generation thinks helps us to understand and explain historical action. And maybe predict future action.

So I think a lot about what Generation Z will be like. I have written before about what Generation Z will be like at work, but I've been thinking, recently, that the way Gen Z is educated will change the workplace when they enter it. Baby boomers changed politics, Gen X changed family, Gen Y changed work, and Gen Z will change education. Here's how the education of Gen Z will affect us at work.

1. A huge wave of homeschooling will create a more self-directed workforce.

Homeschooling is going mainstream. We have known for a while that public education in the United States is largely terrible. Yes, there are pockets that are exceptional, but for the most part, we have an education crisis on our hands. But Baby Boomers were too scared to solve the crisis with homeschooling. If you homeschool your kids, you take them out of the typical ways to measure how well kids are doing in the competition. Baby Boomers couldn't handle that, and they also wanted to work full-time, so instead of homeschooling, Baby Boomers got kids tons of tutoring and extra help after school.

Gen X is more comfortable working outside the system than Baby Boomers. Gen X women are fine quitting their jobs to take care of their kids—they have no feminist ax to grind in the workplace. And Gen X parents don't feel a need to have their kid compete because Gen X is so noncompetitive. So homeschooling among Gen X parents is becoming mainstream. It's no longer just for religious radicals and problem children. Homeschooling is for parents who know public schools are broken and don't have \$20,000 a year for private school.

This means we will have a generation of kids who grew up with largely a self-learning, self-directed model. They are more accustomed to figuring out what they like to do, and doing it on their own. The crisis to figure out what to do with one's life will not last so long because Gen X will raise more independent and self-directed kids.

2. Homeschooling as kids will become unschooling as adults.

We have established that school does not prepare people for work. In fact, Gen Y has been very vocal about this problem because a) they did everything they were told to do and it didn't help them get a job and b) we have a national crisis because gen y has huge debt from college and little ability to pay it back.

With alternative schooling and an emphasis on independent investigation, Generation Z will be the first group of knowledge workers who were trained to do their job before they started working. For example, Generation Z will be great at synthesizing information because they will have been doing that—rather than memorizing—the whole time they were in school.

The workplace ramification of this shift in learning is that Generation Z will have no problem directing their careers. They will know how to figure out what skill to learn next, and they will have more self-discipline to do it on their own. When Gen Z enters the workforce, the older people, Gen X and Gen Y, will work to live, not live to work. This will be something Gen X and Gen Y fought hard for. To Gen Z it will be easy to do and self-learning will take center stage in their work day. So, as qualifications for the workplace will rapidly change and older people who don't keep up will be outdated, it will be Generation Z that is best at keeping up. Not because they are young, but because they understand that unschooling is not a movement for kids, but a way to live a life, and it doesn't stop when you start getting a paycheck.

3. The college degree will return to its bourgeois roots; entrepreneurship will rule.

The homeschooling movement will prepare Generation Y to skip college, and Gen X is out-of-the-box enough in their parenting to support that.

One of the books that really changed the way I think is Zac Bissonnette's book, *Debt-Free U*. He explains why no one should go into debt for college. It's just not worth it. He says, even if your parents have the money to pay for college, use it for something better—like buying yourself a franchise and learning something that'll really help you establish yourself in the adult world.

Baby Boomers are too competitive to risk pulling the college rug out from under their kids. And Gen Y are rule followers—if adults tell them to go to college, they will go. Gen X is very practical and is also the first generation in American history to have less money than their parents. So it makes sense that Gen X would be the generation to tell their kids to forget about college.

Ninety percent of Gen Y say they want to be entrepreneurs, but only a very small percent of them will ever launch a full-fledged business, because Generation Y are not really risk takers. However I am guessing (based on links like this one) that most members of Gen X have, at some point, worked for themselves. The entrepreneurship bug will be in full force when Gen Z comes along. They will feel they have no choice but to do that or weather an unstable

workplace with huge college debt. People will trade in a college degree for on-the-job learning. The result will be a smarter workforce and the end of universities as a patronage system for philosophers.

Non-denominationalism from the Frankfurt School (2013-01-22 12:36)

In an age that encourages *nondenominationalism*, using the name “Lutheran” may seem out of place. Some might even charge that it is wrong or sinful to use the name. But to my thinking, it is important to say clearly what you believe about God. The name “Lutheran” is shorthand for getting to those facts. It simply means, “I agree with Luther,” whose teaching has been well-known for nearly five hundred years. Calling yourself “nondenominational” became popular in the late twentieth century. But the idea stems from nineteenth-century movements that encouraged people to call themselves simply “Christians” in the hope of uniting all of Christendom. Those efforts failed and actually *resulted in an increased number of denominations!* When I hear nondenominationalism, I remember that particular hospital enforcing nondenominationalism (ie: corruption). Quite frankly, Obama is nondenominationalism and hospitals are still clearly corrupted by political correctness (ie: Critical Theory / Frankfurt school). As Lutherans interact with other Christians, they often find themselves struggling to explain their beliefs and practices. Although many Lutherans have learned the “what” of the doctrines of the Church, they do not always have a full scriptural foundation to share the “why.” When confronted with different doctrines or denominations, they sometimes cannot

clearly state their faith

(Frankfurt School publication)

Protestant Ethic and Spirit of Capitalism PDF download A thumbnail version goes like this. There appears to be lots more Protestant capitalists than there are Catholic ones. Also, Protestant countries tend to be more economically developed than Catholic ones - so why? Marxism would say that people's ideas are a manifestation of the economic structure they find themselves in, but Weber believes this is only partly true, although he starts off strongly opposed to Marxism, in the end he is much less certain of the limits of the role of economics in providing the base for these ideas to flourish.. All the same, he believes that there is something in Protestantism that makes Capitalism more or less inevitable and that is not present in Catholicism. Now, given the countries picked - Italy and Spain on the Catholic side, Northern Europe and England on the Protestant side, you could possibly argue that living in a country with an incredibly bad cuisine is the problem. But Weber focuses on religion. In the last chapter he says that extreme Protestant views run something like this - God has a perfect plan which he worked out at the dawn of time. There is nothing you can do to change this plan. You don't deserve to be saved - no one does (we are all contemptible sinners and it is only God's grace which saves us in any sense). You cannot know you are saved. The only way you might 'guess' is if God rewards you. So, if you work hard and gain riches you are obviously in God's favour and therefore you might also be saved. Spending money is a sin. So, Calvinism and other extreme sects encouraged people to work

hard and not to spend - prerequisites for the growth of Capitalism. Now, that bit is the bit this book is mostly known for. But what I found interesting was the idea at the very end that becoming increasingly wealthy - like Silus Marner - also leads one to become increasingly obsessed with secular interests, not least in increasing ones own wealth to the point of a fetish and to become obsessed with worldly goods, rather than heavenly ones. So, while Protestantism is seen as a kind of prerequisite for the early development of Capitalism, ironically enough, Capitalism does not return the favour and works to undermine the extreme forms of this faith that assisted its own development.

Lutherans top place in Chistianity history (2013-01-28 15:38)

I coordinate with Lutheran Church Missiouri synod, a Lutheran synod.

The Reformation was a political and religious movement in Europe that began in the 1500s and lasted for roughly 150 years. It is difficult to pinpoint exact starting and ending dates for the Reformation, but we can point to two events that seem to begin and to culminate the Reformation era: 1517 (Martin Luther's 95 Theses and his protest against the indulgence system of the Roman Catholic Church) and 1648 (The Peace of Westphalia, treaties that ended both the Thirty Years' War and the Eighty Years' War and thus put an end to most of the civil disruption caused by

the religious movement).

1. Luther's *Ninety-Five Theses* (October 31, 1517) It has been argued that the importance of Luther's nailing of the 95 Theses to the door of the Castle Church in Wittenberg is often overestimated, since all public disputations were promoted in this manner. Furthermore, it is evident from the 95 *Theses* that Luther's decisive break with Rome is not yet clear. He upholds the indulgence system, papal authority, and the existence of purgatory. Yet, this crucial event deserves to be at the forefront of any discussion on important Reformation events because it is the spark that led to the flames of revolution. Luther's 95 *Theses* were published, printed, and disseminated into Europe, and the publication ignited a religious fervor that exploded across Germany and beyond.

2. The Marburg Colloquy (1529)

Luther and Zwingli's discussion of the theology of the Lord's Supper may seem an odd choice for the 2nd most important Reformation event, but the political and religious consequences of their failure to come to agreement on the Eucharist set the course for a split which has lasted almost 500 years. Because the Reformers could not agree on the Lord's Supper, the political alliance between Reform-minded countries was severely hindered. The religious implications forced the Lutherans and the Reformed to go separate ways, creating an animosity that precluded religious unity and led to even more splintering of Protestantism into differing groups.

3. Publication of Luther's Translation of the New Testament (1522) Luther's publication of the New Testament into common German was a watershed moment for the Reformation in Europe. He was followed by William Tyndale's work on the New Testament in 1526 and by a host of other common-man translations in other countries. The translation of the Bible into the language of the people allowed the Reformers to base their criticism of the papacy on biblical grounds and led to the common man being able to search the Scriptures for himself without relying solely on the Church's authority.

4. The Act of Supremacy (1534)

Henry VIII's institution of the Church of England and his positioning of himself as the head of the Church was the beginning of a long and checkered history of Reformation in England, in which the institution of Reformed theology from the top-down brought its own set of problems.

5. The Edict of Nantes (1598)

This event was one of the most hopeful signs that the Reformation would eventually end with different religious groups coexisting peacefully. This innovative act of tolerance formed the basis for the modern-day secular society of freedom of religion.

6. The Council of Trent (1545-63)

The Roman Catholic declarations following the Council of Trent eliminated virtually any hope for reconciliation between the Catholic Church and the Protestant movement. The enormity of this council's output served to codify Roman Catholic theology for the next four centuries, forming the Tridentine period of Roman Catholicism.

7. Calvin's *Institutes* (1559)

John Calvin's systematic theology *The Institutes of the Christian Religion* formed the basis for the adoption of Reformed theology in Europe and America. His theology is important because it was a visionary exposition of theology, whereas the other Reformers' theologies were reactionary in nature, being forged in the midst of conflict.

8. Martin Luther's Three Treatises (1520) Martin Luther's three treatises to the German people in 1520 (*Appeal to the German Nobility*, *The Babylonian Captivity of the Church*, and *The Freedom of the Christian*) served as a fervent call to reformation of the church, influencing the Protestant movement in Germany and beyond for years to come.

9. St. Bartholomew's Day Massacre (1572)

The Catholic mob violence against the Huguenots that lasted for several months claimed the lives of thousands of French Protestants. This event was a turning point in the French Wars of Religion, as it radicalized the Huguenot movement.

10. The Peace of Augsburg (1555)

The first religious war of the century ended, as rulers allowed territories to choose their religion. This was the beginning of religious toleration in Europe, which formed the foundation for the Edict of Nantes and the Act of Toleration.

Bought 2nd Nspire CAS / what's Maxima / what's sage (2013-02-03 03:27)

I just bought a Nspire CAS Touchscreen for \$50, the best calculator available. With the 3.2 firmware update, Nspire CAS has more features and math algorithms than TI-89 Titanium. I previous bought a Nspire CAS in 2009.

Maxima is free CAS for Windows which has all the features of SAGE in universities, yet is a lot smaller filesize. It is based on DOE-MACSYMA. Its abilities include symbolic integration, 3D plotting, and an ODE solver.

I found a free CAS running on Ubuntu (1.5 GB) in a Virtual Box image. This "Sage" software might exceed Nspire CAS functionality and its free. I know Sage is used by universities who can't afford commercial CAS applications.

Possessing no credit scores would be a huge hurdle whenever requesting mortgage finance. Loan merchants need adequate enough advice to brew a decision. Deficit of credit ranking is a missing out on element in the dilemma. It indicates any homeowner hasn't recently stole dollars, found very little credit lines, very little references which can check out his/her economic efficiency. Acquiring hardly any consumer credit [[url=http://pozyczkibezbiktop.net.pl](http://pozyczkibezbiktop.net.pl)]pożyczka optima[[url](#)] is not just precarious when considering receiving a mortgage loan, however also can be a issues throughout other locations regarding daily life, by way of example when ever trying to find a loft apartment (landlords take a look at consumer credit and even references as a result of several other landlords). Conversely, almost everyone got virtually no credit history from the outset. It's important to get started in to develop an individual's consumer credit rating at some point on your life. Now there should always get to begin with just for anything. On the plus side, there can be banking institutions what person understand or know simply no credit ratings may be a clean get started in including a potential fresh buyer [[url=http://pozyczkipozabankowetop.org.pl](http://pozyczkipozabankowetop.org.pl)]pożyczki pozabankowe[[url](#)] for years to come. Although bankers not to mention charge card companies experience rigorous financial

standards, accumulating credit history isn't impossible, however it usually is complicated. There are specific strategies for ridding yourself of certainly no credit scores, for illustration taking out a strong installation financial loans that has a protection as well as a co-signer, trying to get a fabulous collateralised charge card, trying to keep up-to-date data wholesome, and so on. Payday cash advances may not be the highest resource with regard to strengthening credit scores. As a question involving basic fact, they are make credit standing mainly amid cash advance banks, nevertheless complete not a thing for the purpose of traditional loan creditors for example banks.

Methods with regards to online payday loans, but, is definitely [\[url=http://pozyczkadowod247.net.pl\]](http://pozyczkadowod247.net.pl)pożyczka na dowód^[/url] the point that extremely little loan creditors totally take a look at ones credit standing, since it doesn't really really make a difference if you have had hardly any consumer credit rating or possibly bad credit if you nevertheless bear an effective possibility that you'll receiving permitted for that home loan you should have. Very little credit ranking investigate is really a concern solver in the event when you need it predicament shows up once revenue should be used easily and one does not credit history and undesirable credit rating and just does not the perfect time to use racking up greetings credit profile. Pay day lenders really do not consult embarrassing things together with they never will need security [\[url=http://pozyczkipozabankowetop.org.pl\]](http://pozyczkipozabankowetop.org.pl)pożyczki pozabankowe^[/url] or perhaps a co-signer although provide split second fast payday loans on a single morning with utility in most cases. Fortunately they are comparatively rapid and even effortless. Furthermore, they can be attainable 24/7 including weekends in addition to holiday season. Nonetheless, payday advances can be short-term not to mention small-dollar financial products having great rates of interest as well as financial payments. As a result, cash loans usually are those of you that are actually very sure they'll find the money for to be charged all the financial loan rear over the following few due.

Anonymous (2013-02-09 18:33:02)

Obtaining absolutely no credit rating are sometimes enormous barrier when ever seeking for mortgage finance. Lenders should have enough knowledge carryout a final decision. Not enough credit standing can be a absent article with the marvel. This implies typically the purchaser hasn't formerly approved dollars, have basically no credit cards, basically no recommendations that may investigate his/her economical overall performance. Developing very little consumer credit rating [\[url=http://pozyczkadowod247.net.pl\]](http://pozyczkadowod247.net.pl)kredyt chwilówka ing^[/url] is not just tricky in relation to purchasing a loan, but it may additionally be a problem through other places involving daily life, by way of example as soon as getting a rental (landlords take a look at credit scores and even evidences from alternative landlords). On the other hand, everybody had simply no credit score at the start. You need to launch to produce ones own credit ranking sooner or later throughout life. In that respect there should possibly be the very first time with regard to everything. Thank goodness, there are actually financial institutions that realise that hardly any credit ranking may be a refreshing start out including a likely fresh consumer [\[url=http://pozyczkipozabankowetop.org.pl\]](http://pozyczkipozabankowetop.org.pl)karty kredytowe bez bik^[/url] designed for a considerably long time. However financial institutions and additionally credit card providers currently have rigid loans specifications, gathering credit score isn't unattainable, even though it may be complex. There are plenty of methods for eliminating virtually no credit, one example is committing to a powerful installing mortgages having a capital or maybe a co-signer, making an application for some properly secured credit card, attempting to keep latest data healthy and balanced, or anything else.

Payday cash advances may not be the most successful resource with regard to accumulating credit rating. Like a make a difference with matter, they are able to establish credit ranking exclusively in between fast cash loan creditors, however carry out nothing with regard to regular loan companies for example banks.

Methods around cash loans, then again, is usually [\[url=http://pozyczkiprywatnebezbi.org.pl\]](http://pozyczkiprywatnebezbi.org.pl)pożyczki prywatne^[/url] the truth that very little loan companies truly verify any credit standing, in order that it doesn't certainly issue when you have certainly no consumer credit and / or lousy credit history to create continue to stand up a good potential for having recognized for one bank loan you may need. Hardly any credit ranking check is mostly a situation solver for fear that a crisis problem takes place if revenue should be used swiftly and something has no credit score or maybe lousy credit and simply lacks the time to work with gathering howdy credit report. Fast cash lenders you should never consult embarrassing doubts as well as they cannot necessitate guarantee [\[url=http://szybkapozyczka247.net.pl\]](http://szybkapozyczka247.net.pl)szybka pożyczka^[/url] or possibly a co-signer yet provide you with fast cash advances on the same working day of utility quite often. They're also quite easily together with comfortable. What is more, they can be obtainable 24/7 this includes weekends and holidays. All the same, fast payday loans tend to be short-term plus small-dollar mortgages with the help of great home interest rates and additionally finance expenses. So, cash advances tend to be those of you that tend to be certain they are willing to afford to fork out the actual loan product rear if it's owing.

China/Russia militaries using FreeBSD for some reason (2013-02-10 06:57)

I have this idea that both Russia and China are using FreeBSD in cold war against Linux which our Government and military use.

FreeBSD ^

US should have "PC-BSD Fermi"

Dual Shock 4 first impressions (2013-02-13 01:03)

I love this controller. I love Dual Shock. I would love Dual Shock 3 for PS4, but this touch screen is a bonus. I have seen Killzone: Shadow Fall and Destiny screenshots. They look superb. I'd pay \$500 for PS4 and Dual Shock 4 tomorrow. Playstation 4 is TWO YEARS LATE! I had my Radeon HD 5970 Black Edition (DirectX 11 GPU) for over Three years. CONSOLES ARE SUPPOSED TO HAVE 5 YEAR LIFESPANS, NOT OVER SEVEN YEAR LIFESPANS! I hear on other [stupid] websites, how the games don't look good enough. PS4 is over two years late, and the graphics are clearly better than a hypothetical PS4 released in 2010. The reality is PS4 is late to market and nobody has the same amount of income as they did in 2010. It seems the longer Sony drags out PS4, the less games people buy. The President Bush tax cuts have ended in 2012. Nintendo was brilliant in seeing Bush tax cuts ending and releasing Wii U before 2013.

MLB in decline (2013-02-13 02:31)

Detroit Tigers selling free tickets to 13 and under. I am sour on baseball. It's not the game itself that has me bothered but rather the way it is being played on the Major League (MLB) level. It is now World Series time and I am not even that excited. It's not because my team is not in it but rather my heart is not in it. This MLB lifer is not in the game. There are a number of contributing factors to this but I will isolate this down to three manifestations of one big

problem. The problem is pride. Maybe I should say "greed" instead so that people don't think in sports terms that have baptized "pride" as virtue. I am bugged by the greed.

1) The Steroids: I was glued to the TV when McGuire and Sosa were battling for the Home Run titles at the end of the 90's. Then we found out that steroid usage was rampant in the game. It wasn't just a few guys, no, there was a widespread epidemic afoot. It seemed like many guys were cheating. Suddenly the reality gap between video games and real games got smaller. It wasn't just because graphics got better; no, MLB became more fake. This became a significant rock in my baseball watching shoe.

2) The Free-Agency: As a Red Sox fan I have personally benefitted from a team that opens up its purses to pay people a lot of money to play for them (and by consequence not for other teams). However, somewhere in the midst of the massive open-market that is Major League Baseball we have begun to root not for people but for the uniforms. My rooting interest in a team becomes strangely disassociated from the players wearing the uniforms. Rich teams pilfer poor teams and superstars leave cities to go and play for other markets. Nobody gets too attached to anybody or any team. It looks and feels a lot different than the game I loved to watch at Fenway Park growing up.

3) The Lack of Hustle: This really is my big issue. I watch these guys play and it is obvious that many of them are not giving 100 %. If you flip on a game in May you will see people that look like they have the intensity of a company softball game. Guys not running out ground balls, making careless plays, and failing to think strategically. As a case in point if you turn on the World Series you will see a different game than you see in June. There is so much more intensity. Last night we saw Cardinal pitcher Chris Carpenter give up his body and dive into first base to get the out. Sadly, this type of hustle and sacrifice is not the norm throughout the year. The post-season guys are playing the game like it matters.

Well, there is something else that matters for me, time and money. I don't have a lot of either. If I am going to plunk down the time and money to go to a game or sit and watch it then I expect the players to hustle. When I don't I look elsewhere. And if you haven't noticed, football players hustle. If they don't they will lose their jobs. It is no accident that the NFL is expanding its dominance over the MLB.

I think all of us have grown to expect and even tolerate greed in this world (the analysis of this is worth the brain power). However, when it comes to MLB it has become clear that I can't take it. It's over the top. That's why I'm calling the bullpen for something better to do with my time.

Why Mighty Morphin Power Rangers was so popular? (2013-02-14 17:42)

MMPR was the most iconic and most famous because it was the first season. Kids loved it, a lot of parents hated it and the toy industry made a mint off it. When most non fans think of PR, they think of MMPR (unless maybe they have young children currently watching a new season of PR). But why is it so popular?

When you ask a non-fan about_ Power Rangers, it would be something about Mighty Morphin' Power Rangers,_ and every _ Power Rangers parody is based on Mighty Morphin' Power Rangers.

When Disney did a poll for the five most popular Rangers, the only non-MMPR to make the list was Andros. Not a single Disney Ranger charted. In this case, first production company wins. That's easy to explain. The original Power Rangers used the same characters and actors from year to year. This made them a lot more recognizable than when the cast changes from year to year as in the later seasons. Usually, it would either be:

1. MMPR is the best (First show).
2. MMPR-PRIS is the best (First era).
3. MMPR-PRWF is the best (First production crew).

Either way, it's a case of First wins.

(Someone's probably gonna shoot me because I used an image from the remastered MMPR.)

The first incarnation of anything that's wildly popular is usually the most memorable and ingrained into the public psyche, since it's what made it wildly popular in the first place. Then it lasts for two or three years and/or two or three incarnations that are of comparable success, then from then on it's diminishing returns, unless the franchise sticks around long enough to make a comeback (and even then it still remains in the shadow of the original). It's a pattern that works with almost any pop culture phenomenon you can think of, unless the second incarnation/second season is regarded as an abject failure.

The "big push" only exists with MMPR because it was the first of it's kind. Nobody had seen something of it's kind before. Once that became **passee**, it stopped being a big investment.

The franchise had sizably peaked by 1995 and was killed by "they changed it, now it sucks" with the cast and name changes, there's always backlash with an aging series that goes on without a break....there's more backlash to be had when that series jettisons it's entire cast of veterans.

From a marketing standpoint to the entire world, you couldn't go without knowing what MMPR was. It was a cultural revolution for our generation. EVERY child had watched the show, played with the toys, or pretended to morph at some point. Power Rangers hit the world just as hard as the Ninja Turtles, Pokemon, and Hannah Montana. It was the hottest ticket in existence. Once that fever subsided, there were a ton of kids who never knew anything about a "Zeo", let alone their parents. Furthermore, the majority of human beings have no idea Power Rangers still exists. There have been cast members who got calls from their agents to audition and replied *"That show's still on?"*

As far as people like us, however, people who never stopped loving or returned to loving Power Rangers hold MMPR in great nostalgic value, while not necessarily liking that iteration the best. I bet if there were a poll conducted over the most popular season amongst veteran fans, Zeo would probably take the title, with Space a possible contender. Even Time Force or Dino Thunder may slip in there.

Looking back, I can see why MMPR was what drew a lot of us in. The plot was simple: Bad guys are threatening Earth, and the Power Rangers have to stop them. Rita had no reason to be attacking the Earth besides conquering it. She wasn't looking for supplies for some huge diety. She wasn't serving anyone (initially - later seasons would build the evil side to the UAE of Space) and her whole army was either already released by those astronauts in the first 5 minutes of the first episode, or they were made from clay. All she wanted to do was defeat the Power Rangers, and that was IT. It's brilliance in its simplicity. Also, the blood-pumping theme song that says 'We're the Power Rangers! Shut up evil! BIZAM!' and, excuse my language here, the kick ass music of the Mighty Raw is about half the reason the original series is so great! It didn't act like a high drama like Lightspeed or Time Force, that's probably why fans are turned off by this. Like, if people wanted to watch a high drama, they shouldn't be watching Power Rangers. Because Power Rangers is a kids show, always have, always will. Granted, those seasons are amazing, but that's what people prefer.

I got the complete DVD collection of the Mighty Morphin two weeks ago. I love the second season the most.

I also bought seasons 4 - 7 boxset, because I watched Zeo.(Power Rangers ZEO, Power Rangers Turbo, Power Rangers In Space and Power Rangers Lost Galaxy)

The President's Health Care Law I remain committed to controlling Washington's reckless spending spree by rolling back the President's fiscally irresponsible health care law. Businesses, policy experts, and government actuaries have continually confirmed what the country already knew: this law spends trillions of dollars that we don't have, raises taxes on workers, businesses and families, and puts the federal government squarely in the middle of health-care decisions. Budgetary smoke and mirrors were used to claim this plan would reduce the deficit. The law relies on 10 years of tax increases and 10 years of Medicare cuts to pay for six years of new spending. The bill raids more than \$700 billion from Medicare to fuel a new \$1.9 trillion open ended entitlement and ignores the \$138 billion needed to avert cuts to Medicare physicians. Even the implementation costs are hidden behind budgetary gimmicks and Washington-style accounting rules. In addition to its impact on the deficit, the health care law is damaging to job creation and

economic growth. Its dizzying maze of mandates and thousands of new regulations threaten to cripple businesses both large and small. The bill also hurts workers by encouraging employers to drop coverage and dump employees into a government-controlled exchange rather than pay the increased rates associated with new mandates in the bill. With the Supreme Court ruling, 21 tax increases remain in the law, a dozen of which target Americans earning less than \$200,000 per year for singles and \$250,000 per year for married couples. With the national unemployment rate hovering around 8 %, keeping a job-destroying, spend-and-tax policy on the books would be irresponsible and would further diminish the prospects of a robust economic recovery. I raised these concerns with the President at the 2009 Blair House Summit and again when Congress took up the bill. Since then, the Administration's own Chief Actuary, along with a host of other independent studies, have raised many of the same concerns. But as the House stands ready to undo this damage, some are crying foul claiming that repeal will in fact raise the deficit. Only in Washington can repealing a massive new government-spending program be seen as adding to our fiscal problems. To be clear, the same budgetary gimmicks that were used to enact the health care law last year are still there. Nothing has changed. All of this belies the point that our nation's health care system is fundamentally broken. We spend more per capita on health care than any other developed nation, yet our health outcomes are worse. Republicans and Democrats both agree that the status quo in health care is unacceptable. Congress must work diligently to improve the quality of care, lower costs, and slow the spiraling growth of programs already on the books. These are not new ideas, and I have been advocating for comprehensive patient-centered health care reform since before the health care debate began in earnest. We cannot afford to tinker around the edges of this fundamentally flawed law. Full repeal is a critical step towards true health care reform. Supreme Court Decision On June 28, 2012, the Supreme Court affirmed that the federal mandate to purchase government-approved health insurance imposes a tax on the American people. Despite the disappointing decision on the law's constitutionality, there is no question that the law remains terrible policy. I remain committed to advancing reforms that realign incentives so that individuals and their doctors – not government bureaucrats or insurance company bureaucrats – are the nucleus of our health care system. This requires reforms to equalize the tax treatment of health insurance, invite true choice and competition, and ensure critical programs like Medicare and Medicaid can deliver on their promise in the 21st century. The Fiscal Year 2013 Budget, The Path to Prosperity Our government has a spending problem—a problem so large that it is driving up our debt, hurting our nation's ability to create jobs, and threatening our future. In the past, Washington has not been truthful about the magnitude of these problems facing our country, but we can no longer afford to put off an honest, fact-based conversation on how to solve them. Unless we act soon, government spending on health and retirement programs will crowd out spending on all other government programs, including national security, and, eventually, will consume every cent of every federal tax dollar. No one person or party is responsible for the looming crisis. Yet the facts are clear: major spending increases have failed to deliver promised jobs. The safety net for the poor is coming apart at the seams. Government health and retirement programs are growing at unsustainable rates. The new health care law has created a tremendous fiscal burden, and a complex, inefficient tax code is holding back American families and businesses. The House-passed budget repeals the President's disastrous new health care law and protects the health and retirement security of those who need it. With the creation of Medicare in 1965, the United States made a commitment to help fund the medical care of elderly Americans to ensure that a serious illness would not exhaust their life savings or the assets and incomes of their working children and younger relatives. Medicare's structural imbalance threatens beneficiaries' access to quality, affordable care. Flaws in the structure of the program are driving up health care costs, which are, in turn, threatening to bankrupt the system – and ultimately the nation. Unless Congress fixes what's broken in Medicare, without breaking what's working, the program will end up causing exactly what it was created to avoid – millions of American seniors without adequate health security and a younger working generation saddled with enormous debts to pay for spending levels that cannot be sustained. It is morally unconscionable for elected leaders to cling to an unsustainable status quo with respect to America's health and retirement security programs. Current seniors and future generations deserve better than empty promises and a diminished country. Current retirees deserve the benefits around which they organized their lives. Future generations deserve health and retirement security they can count on. By making gradual structural improvements, Congress can preserve America's social contract with retired workers. Recognizing the problems facing Medicare, the House Budget Proposal: Strengthens health and retirement security by taking power away from government bureaucrats and empowering patients with control over their care. Repeals the new health care law's unaccountable board of bureaucrats

empowered to cut Medicare in ways that would jeopardize seniors' access to care. Saves Medicare for current and future generations, with no disruptions for those in and near retirement. For younger workers, when they become eligible, Medicare will provide a premium-support payment and a list of guaranteed coverage options – including a traditional fee-for-service option – from which recipients can choose a plan that best suits their needs. Program growth would be determined by a competitive-bidding process – with choice and competition forcing providers to reduce costs and improve quality for seniors. Premium support, competitive bidding, and more assistance for those with lower incomes or greater health care needs will ensure guaranteed affordability for all seniors. Allowing the federal government to break its promises to current seniors and to future generations is unacceptable. The reforms outlined in the budget passed by the House protect and preserve Medicare for those in and near retirement, while saving and strengthening this critical program so that future generations can count on it to be there when they retire.

Reforming Medicaid in the Path to Prosperity The Congressional Budget Office estimates that federal spending on Medicaid, a program which provides medical care for the poor, will grow from \$265 billion in 2013 to \$536 billion by 2022. Should this problem continue to be ignored, Medicaid will continue to overwhelm state and federal budgets and fail the vulnerable people who need it most. Specifically, the Path to Prosperity: Secures the Medicaid benefit by converting the federal share of Medicaid spending into a block grant tailored to meet each state's needs, indexed for inflation and population growth. This reform ends the misguided one-size-fits-all approach that has tied the hands of so many state governments. States will no longer be shackled by federally determined program requirements and enrollment criteria. Instead, they will have the freedom and flexibility to tailor a Medicaid program that fits the needs of their unique populations. Improves the health-care safety net for low-income Americans by giving states the ability to offer their Medicaid populations more options and better access to care. Medicaid recipients, like all Americans, deserve to choose their own doctors and make their own health care decisions, instead of having Washington dictate those decisions for them. Saves \$810 billion over ten years, contributing to the long-term stabilization of the federal government's fiscal path and encouraging fiscal responsibility at the state level. All Americans will pay more because of this broken Medicaid system – and not just in higher taxes. Because Medicaid's reimbursement rates have been ratcheted down to below-market levels, the care that Medicaid patients receive is often substandard. Offering states more flexibility for their Medicaid beneficiaries will remove the stigma Medicaid recipients face, and allow them to take advantage of a range of options available. Several of the nation's governors have made innovative proposals to fix Medicaid. This budget encourages further efforts in this direction.

Discs and DirecTV are in demand again with US gov regulating Internet (2013-02-26 20:30)

Netflix takes up 1/3 of the total US Internet access. Now American will support Hollywood and foreign industries by buying DVDs, Blurays, and Blu-ray 4k along with paying for DirecTV and Dish Network like in the early 1990s-2000s. Yeah, actually go out and put a satellite dish on top of your house for 'cable tv' instead of relying on your cable provider for Netflix!

Buy RARE LCMS books before LCMS defuncts (2013-03-02 10:24)

In 2017 the Lutheran church in North America will observe the Reformation by closing hundreds of its congregations and preaching stations. We love the purity of our pulpits and quiet of our sanctuaries, which grow every quieter. I am writing this because of something I saw the other day. Recently, *Concordia Publishing House* introduced an easy to use Outreach Kit, which some Lutheran congregations have picked up. Most congregations are taking one copy of the kit, which equips them to reach out to 50 households. What struck me yesterday was when I saw members of another conservative protestant church snap up twelve copies of the kit, intending to reach out to 600 households—shocking contrast in behavior and an indictment of our passive, Lutheran culture. Some reasons other conservative Protestants are growing while Lutherans are not can be explained as simply as follows: (1) Outreach is an on-going priority for them. They build it into their members' thinking while Lutherans do not. (2) They plan for it and budget for it while we plan for the best sausage supper. (3) They will work with all the messy, confused, needy people who respond to the outreach. We find such people annoying. Our congregations tend to be slower or even totally negligent on these points. This is perhaps because we are a 500 year old church and they are more spry by comparison. Be we have got to address this cultural issue.

It isn't our fault our synod is decreasing. It's Max Weber's fault. A thumbnail version goes like this. There appears to be lots more Protestant capitalists than there are Catholic ones. Also, Protestant countries tend to be more economically developed than Catholic ones - so why? Marxism would say that people's ideas are a manifestation of the economic structure they find themselves in, but Weber believes this is only partly true, although he starts off strongly opposed to Marxism, in the end he is much less certain of the limits of the role of economics in providing the base for these ideas to flourish.. All the same, he believes that there is something in Protestantism that makes Capitalism more

or less inevitable and that is not present in Catholicism. Now, given the countries picked - Italy and Spain on the Catholic side, Northern Europe and England on the Protestant side, you could possibly argue that living in a country with an incredibly bad cuisine is the problem. But Weber focuses on religion. In the last chapter he says that extreme Protestant views run something like this - God has a perfect plan which he worked out at the dawn of time. There is nothing you can do to change this plan. You don't deserve to be saved - no one does (we are all contemptible sinners and it is only God's grace which saves us in any sense). You cannot know you are saved. The only way you might 'guess' is if God rewards you. So, if you work hard and gain riches you are obviously in God's favour and therefore you might also be saved. Spending money is a sin. So, Calvinism and other extreme sects encouraged people to work hard and not to spend - prerequisites for the growth of Capitalism. Now, that bit is the bit this book is mostly known for. But what I found interesting was the idea at the very end that becoming increasingly wealthy - like Silus Marner - also leads one to become increasingly obsessed with secular interests, not least in increasing ones own wealth to the point of a fetish and to become obsessed with worldly goods, rather than heavenly ones. So, while Protestantism is seen as a kind of prerequisite for the early development of Capitalism, ironically enough, Capitalism does not return the favour and works to undermine the extreme forms of this faith that assisted its own development. Why Are Video Games so Popular Today? (2013-03-12 12:58)

Video gaming is one of America's favorite pastimes. There are more video game stores in New York City than there are books stores. And there are enough games out there to satisfy the taste of any gamer alive. Why is it so popular today? Why do people of all ages find themselves so fascinated with the games? Video gaming has come a long way since Mario Brothers. Games of all genres and types are available for any age group. There is interactive, fun to play and informative games available for the youngest audiences, designed to be both educational and fun. Favorite cartoon characters, such as Nemo, Chicken Little, Sponge Bob and Mickey Mouse, come alive in the video games to keep children company. Action heroes like Superman and Spiderman make appearances again with new missions to accomplish and more tricks up their sleeves. Racing games, action games, shooter games and arcade games keep coming out for audiences to enjoy. The reason for this fascination is simple. Everyone wants to be part of the story, or do something that they would not ordinarily be able to do. Not many people can make it in a car racing world and even less can afford to try. But it takes a game console, a TV and a racing game to feel like you are sitting behind the wheel of a gadget packed racing car. There are no limits to what you can do behind that wheel; there are no real bills to pay and no injuries that can maim you. All there is is the excitement of the race, the rush of victory and loads of fun.

Many men, no age limits, get fascinated with the first person shooters because it makes them feel all powerful and able to do anything. Hardly anyone will want to run around with a real gun, hunting for enemies and risking to be shot from the back. But games like Halo provide a safe way to explore your talents as a soldier and give a new insight on the art of warfare. How many of us would not like to be the hero and save the world? RPG's provide just the opportunity. Turn the Playstation on and put in the disk and you will be carried off into a distant land where humankind's last hope for survival rests with you. Life can be ordinary and not very interesting and can lack the excitement that will make your heart race. Daily tasks are dull and the roles all of us act out at work and at home do not allow us to get out of the boundaries of every day routine. Problems can overwhelm and get the best of anyone. Sometimes the need to dive into a world where every day problems do not exist is alluring and exciting. The ability to become someone else, someone you will never be, to live out a life full of danger and mystery, is offered by video games to all people. But even if it's just for one hour or a few minutes it makes feel alive and able to do absolutely anything.

bad gaming habits (2013-03-13 08:59)

1) Hoarding.

Of all the bad habits I have in gaming, this one is definitely the most wide spread. It's odd, because in real life I'm not very tied to material objects. I collected comics and comic cards as a kid, but it wasn't sustained in to adulthood. The only thing I really have a lot of is video games and consoles, and even that isn't a substantial collection. It's probably small enough to fit in to a duffle bag.

Not my Skyrim home, but might as well be.

When it comes to playing video games, however, it's a completely different story. I didn't realize I had a problem until I played Skyrim. One day I was cleaning out the inventory in my Whiterun home, and all of the sudden it hit me: I have over 800 cabbages in my cupboard. I sat there for a brief moment as that fact sunk in, and I only had one thought... "What in sake am I going to do with 800 cabbages?"

Of course that was just the beginning. My eyes had been opened, and I began to notice that I've hoarded all sorts of stuff in other games. Specialty ammunition in my favorite shooters. Piles of money/resources in just about every game I've played. So many pilot lights in Fallout 3... I've since gotten better about this, but it's actually taken some work. I re-trained myself to be more discerning, and to remember that just because a rusty can exists as an item in this game doesn't mean I need to pick it up. Learn from my mistakes, folks. Don't burden your inventories with items you'll never use, and don't save all your resources for a crazy last stand that probably won't come. Go all out, and enjoy the game to it's fullest!

2) Never Looking Up.

One of the best things about gaming is that feeling you get when you come across something that is out-of-this-world beautiful. A great example is in Halo when you first land on the ring and see it stretch off in to the background and all the way up over your head. Or that first sunrise that you catch as you're galloping across the wild west in Red Dead Redemption. Or the sheer scope of fighting Poseidon in God of War 3. These are beautiful things that are hand crafted by developers with love, in hopes that gamers will see them and lose themselves in the pure beauty and spectacle.

3) Rushing In.

I probably should have thought this through. When I play co-op, I tend to play more like... well, an Instead of using the 2nd person to our advantage and playing like a competent adult, I tend to do something that's significantly less helpful and more likely to get us killed: I charge in head on. Ok, I don't do this ALL the time, but enough that I've noticed it's a pattern. Anyone who has played most FPS games on the hardest difficulty knows that's a pretty quick way to get yourself killed, yet I find it very hard to stop myself. As my teammate hangs back and smartly whittles down the enemies ranks, I'm over here shouting some war cry straight out of Lord of the Rings as I try to punch everything to death. But honestly, what's a guy supposed to do when the beacons are lit and the red dawn approaches? Sigh... I'm not proud of it, but I gotta own up to it. I'm lucky I have patient friends. Here's to all the teammates who died while I was in spectator mode. *pours a little on the sidewalk*

4) Constantly Reloading.

Imagine this if you will. It's a heated game of versus mode in Left 4 Dead 2. My friends and I are trudging through The Dark Carnival campaign, making pretty good time. As I mow down a couple zombies with my AK-47, I instinctively hit the reload button even though I've only shot a few rounds. Then I hear it: the sound of a Charger as he tackles one of my teammates and knocks me on my back. I'm the closest one to him, and as I get to my feet, I pull the trigger only to watch in horror as my character has to restart the reload animation. My teammate's precious life ticks away, and soon we're overrun trying to pick him up off the ground.

Guilty as charged.

If you play lots of shooters, you may have picked up this bad habit along the way. Sure, reloading your gun when you've still got nearly all of the clip left probably doesn't come back to hurt you 99 % of the time. Trust me though, if you play with this bad habit long enough, sooner or later it'll come back to haunt you. You'll be left to watch helplessly as a teammate is pummeled before your very eyes. You'll wake up one night in a cold sweat as the sound of them screaming over the mic "WHY WON'T YOU HELP ME" is still ringing through your head. *shiver*

5) Button Mashing.

Of all the bad habits I have in gaming, this is probably the most serious offender. Look, I've been playing games for a long time and I'm proud that at the very least, I've given every game genre a try. I've enjoyed some genre's more than others (RPG, RTS, Shooters, Adventure, etc), but there are some that I simply can't seem to master. At the top of that list, without a shadow of a doubt, is fighting games. Not arena fighters like Super Smash Bros., but games like Street Fighter, Tekken, Marvel vs. Capcom and the like. And the reason for this is because... my hand eye coordination is atrocious. Scratch that, just my coordination in general. It's why I was a runner in High School and not a... well, any other kind of athlete. I'm not bothered by this fact, but it's the truth.

Erm... Yeah, I'm just gonna keep slamming the buttons with my fist.

It's also why, even after 25 years of playing video games, I still mash buttons. I know, it's terrible, but I just can't do those tricky combos everyone else can do in their sleep. T\

Song of Ice and fire book review (2013-03-20 08:41)

Tags: George R R Martin

To say I've arrived late to the George R R Martin party would be an understatement. At their height, I think it's fair to say these books were as popular as it's possible to be without crossing out of the genre audience like Harry Potter or (eventually) Ender's Game did. Fourteen years after the first book, *A Game of Thrones*, and almost five years since the most recent volume *A Feast for Crows* was published these are still very popular books. This is really a two-for-one epic, in that by reading it you experience not only the epic storyline, but also participate (albeit as a bit player) in Martin's epic struggle to actually complete the series. The series is well over a million words in length already, but even more words have been written about it online, so I will dispense with both the plot summary and the recap of Martin's authorial adventure and instead relate my experience coming to these books in 2010.

I'll begin by answering the most obvious question: given that I obviously read a fair amount of fantasy, why haven't I read these before? Some people who had read a lot of my reviews will know that I almost always wait until series are finished before starting them. Although this was prompted in part by lapsed series that never paid off (*Chtorr* for example), the main concern was time. Whenever a series tells a continuous story, I don't feel like I'm getting the full effect of the later books unless the preceding stories are fresh on my mind. This led to me reading the first book in a series, then the first book again before the second, then the first two before the third, and so forth. For trilogies this

was barely acceptable but as I only have a limited time for reading it becomes quite inefficient for longer series. So I swore off incomplete series right about the time that *A Game of Thrones* was soaring in popularity.

But I'm sure this only raises a further question: why read them now? There are again a couple reasons. The first came when HBO greenlit a TV adaptation of *A Game of Thrones*. I'm one of those people who goes out of their way to read a novel before its screen adaptation, and I was definitely interested in the HBO series, which struck me as at last the appropriate way to adapt a complicated novel: spending a whole season on it instead of cramming into a movie or even miniseries. Then there was the increasing chance that the series would never in any case be finished. It has grown in projected books faster than Martin has written them, and cruelly Martin himself ages at the same rate as the rest of us regardless of how quickly the series moves forward. Who knows whether he will live to finish it? Even if he does, while I'm considerably younger than Martin, nothing is certain in life and I might not make it that long either. Tolkien founded the modern fantasy genre with a trilogy he said was about death, so I guess it's only fitting that series like this one and Robert Jordan's *Wheel of Time* have themselves unwittingly become grim *memento mori* for authors and fans alike.

But the final straw was the feeling that I had already read *A Song of Ice and Fire* by reading other books. Just as Tolkien spawned countless imitators, Martin is widely credited with sparking a flood of hard-edged, cynical fantasy, and I've

read my fair share of it. For instance, Wikipedia cites no less than four prominent authors as being heavily influenced and although I wouldn't call myself extremely well-read I've already read all four (Scott Lynch, Joe Abercrombie, Steven Erikson, and R Scott Bakker). I've also read Glen Cook, whose *Black Company* books are thought to have influenced Martin, and indeed this influence was probably the reason Cook has remained prominent enough for me to seek out his work. I even make comparisons to Martin's work when reviewing fantasy on this site. Well, not his work itself, but to perceptions of it at least. This is starting to get ridiculous, I told myself. My first real contact with epic fantasy was reading *Lord of the Rings*, after all. Wasn't I grateful that I hadn't first waded through imitators like David Eddings, Robert Jordan, and Tad Williams that, whatever their actual quality, fall short of Tolkien's masterpiece?

So I started reading *A Game of Thrones* for the first time in the position of someone who had never read the series before but thought he had a pretty good idea what it was like. I knew nothing about the plot or characters for I had avoided all such details knowing I would eventually read the books, but from countless asides in conversations with friends and reviews of other books, I primarily associated two attributes with Martin's work: First, an unromantic approach to fantasy that emphasized intrigue and realism over magic and elevated prose. Second, the implacable and ruthless slaughter of major characters. Beyond that, while I'd heard some criticisms of Martin's prose and the decision to split the fourth book into *A Feast for Crows* and an as-yet unpublished fifth book, the overall extremely positive reception of the series made me expect an exciting, even addicting, set of books.

Having now finished the extant series, I can say that despite this apparently detailed foreknowledge, the series Martin wrote was quite a bit different than the one I had expected to read.

Let's start with the gritty realism. It's not Martin's fault, but here my exposure to later writers has probably completely changed my reaction from what it would have been had I read the series as it came out. Plenty of authors have tried

to imitate Tolkien's archaic yet evocative style, yet no one has come close to equaling it. It was reasonable for me to suppose that Martin's realistic style would work the same way. Reasonable, but wrong, and obviously so in hindsight. Tolkien's work hasn't been matched because he was uniquely suited both in temperament and profession to write the way he did. Throwing out the excesses of epic fantasy in favor of gritty realism is not nearly so challenging. In fact, it's easier than trying to stay the course. It's no surprise then that Martin's work was not the apogee of this trend but just another stop along the way. Compared to Joe Abercrombie, just to pick one name out of probably a dozen, Martin seems like a hopeless romantic. It's interesting that these days the people impressed with Martin's grit and realism are the people writing about the HBO series ("It's like the Sopranos in Middle-earth"), since when it comes to epic fantasy in television and movies *Lord of the Rings* is still very recent and the natural benchmark.

Then there's the character slaughter. For me, the textbook case of this is in the film *Serenity*. Before that film I have to admit I thought of killing characters as cool and subversive, but afterward I started thinking about how a work of fiction has an unwritten contract with the audience. In some modes, I decided, killing a character might be an effective move while in others it is a betrayal of audience expectations. The fact is, *A Song of Ice and Fire* does indeed kill off characters, a great deal of them. But contrary to my expectations, I argue that it does not, in fact, kill off major characters. Rather, the reader is understandably mistaken about who is a major character and who is not,

for reasons I will get into at length in a moment. So while it's true there's a lot more death in Martin's series than in most fantasy (including many, like Tolkien's, where theoretically lots of blood is shed yet almost no named characters die), it didn't nearly live up to its reputation in this respect either, although that's nothing to be ashamed of.

This leaves the most important issue. Is this the masterpiece of modern fantasy literature that it's made out to be? No, not even close. I'm genuinely disappointed about this. Like anyone, I sometimes start reading a book or watching a film with some bias one direction or another (for instance, all the hype made me go into *The Matrix* looking for a fight, so while I didn't think it was very good, a lot of that reaction is probably my fault), but in this case I was definitely hoping to love these books. For years I've checked up on Martin's progress hoping he'd hurry up and finish so I could find out what the fuss was about. I thought there was a great chance I'd love it, along with certainly some fairly small chance that I'd hate it, or at least strongly dislike it.

I never expected to end up saying: Well, I guess it's not bad. It's okay.

The highlight is probably the worldbuilding. Tolkien and his imitators have emphasized the landscapes of their fantasy worlds. Even the Thomas Covenant series, which seemed at first glance like a rejection of everything Tolkien brought to the genre, spent a lot of its time (and won a lot of its fans, I suspect) on landscapes. Although there are some maps to be found of Westeros and its surrounding countries, Martin's efforts in geographical construction and detail are merely adequate. Instead, more than any author I can recall, he has constructed a social landscape. Looking now at a map of Westeros, the names of cities, rivers, and castles bring to mind the characters who live in or near them. I can't really tell you anything about what Casterly Rock looks like, for example, but just mentioning it evokes the wealth of detail that Martin has invested in the Lannister family and the twists and turns of their fortunes. The Lannisters are perhaps the series' most prominent family, but by the end of the fourth book well over a dozen noble families have been sketched out in impressive detail. The variety in personality, character, and history is impressive and gives Martin's Westeros a different and possibly greater sense of solidity than the traditional naturalistic approach.

The other aspects of the world are considerably weaker. The society seems reasonable enough, but various references to the ancient past ask us to believe that technology levels have been roughly unchanged for thousands of years, and further that not just one but almost every society is historically self-aware of their progression throughout this time. Each of the four seasons lasts for years, but after the first book it is hardly mentioned and I frankly almost forgot about it. Agriculture and economic planning don't seem to be any different from generic feudal despite this massive climatological difference.

Although initially confined to a few children, the series rapidly expands to encompass a large set of viewpoint characters, and this works better than in most pluralistic narratives, probably because Martin is more willing to kill off minor characters and thus prevent his cast from becoming too unwieldy at least until the fourth book. After a seemingly good guy/bad guy approach, Martin shades in a surprising degree of nuance as the series progresses. That Tyrion would be a fan favorite character was obvious from the start, but I was particularly impressed by the handling of Jaime Lannister. Not every character is a success, to be sure (if I never read anything more from Cersei's viewpoint I won't complain) but I don't have many complaints with the characterization. Except for the youngest, the Stark children all act about five years older than they actually are, but that's par for the course (I'm looking at you, *Ender's Game*).

Then there's the plot. Ah, the plot. Goodness. Where to begin?

I think most of the series' fans would point at the plot as being its strength. I can see why they might like it, but I'm going to call it a disaster. Oh, it's not an unmitigated failure, but a tragic one, for there's a good story somewhere in all this quicksand trying to claw its way out. It pulls the reader in, keeps them going through the four massive books that have been published so far, and amounts to nothing. To understand this, think about just what it is this series is about.

You see, in the prologue of *A Game of Thrones*, some throwaway characters venture past a great wall to patrol the wilderness of the far north. For millennia, we learn, the Night's Watch has manned this wall against evil, but for long centuries this threat has been dormant, the people shielded by the wall have become decadent, and the Watch is now too weak to reliably stand against bandits, much less a terrifying supernatural evil. But now there are signs that evil might be stirring! Kill the throwaways and bam, cut to chapter one. I think it's safe to call this an extremely conventional way to begin a fantasy novel. The ur-epic fantasy, *Lord of the Rings* begins with the shadow of the past stirring once more, and its Mordor was once carefully guarded before its watchers became lax. Since then thousands

of fantasy books have begun this way, and I have read dozens of them, as have most of Martin's audience. But I don't think any of those books took Martin's approach to developing this story in the rest of the first book: never mention it again in any way.

All right, that's a slight exaggeration, but not by much. He spends more time on Daenerys, a young princess in exile who must overcome all manner of obstacles both internal and external before she can start walking down the road toward reclaiming her throne, but this well-worn storyline is also strictly a sideline item. The second book, *A Clash of Kings*, even spends a little time on a King who is increasingly led down dark paths by a foreign sorceress, but this too gets only a little space in the ongoing story. Any one of these stories, properly developed, would be enough for a fantasy novel and probably an entire trilogy. Incorporating them all would definitely make for a lively fantasy series. Mind you, anyone who has read a reasonable amount of fantasy can sketch out roughly how these stories will evolve. For example, although a few people sound the alarm most deny the existence of the ancient evil despite increasingly clear evidence, then it sweeps down and everyone is very sorry they didn't listen earlier, and it seems like it is too late and all civilization will perish, but just at the bleakest moment some enterprising individuals manage to win an unlikely victory. Despite his reputation as an innovator, Martin doesn't appear to be deviating from the standard storyline here. Yet by the end of the fourth book, after 1.3 million words and nine years, the ancient evil has only just begun to sweep anywhere, and the other plotlines are even further behind. And no wonder: I don't know how much of all those words went into developing them but I think fifteen percent would be a very generous guess.

Instead, most of the series has been devoted to the titular game of thrones as countless nobles struggle for power in Westeros. Unlike the plotlines I just described, this main thread does not follow normal conventions. It is almost completely without structure. Events happen one after another without any kind of cohesion. It's not that they don't make sense...everything seems fairly logical and Martin proves to be a very inventive spinner of intrigue and conspiracy. Yet this all proceeds outside of the narrative structure that has characterized western literature for centuries. There is no development, there is no sense of progression of any kind, there is no climax. It's the plot equivalent of someone banging an endless series of chords, each unrelated to the next, on a piano. Now I readily admit to being far more interested in the way stories are constructed than the average reader, but I think this has many important downsides even for those who aren't consciously aware of the dissonance.

What was immediately noticeable to readers of the first book in 1996 was the way they had no idea what was coming next. Why should they? Long experience has taught us how plots work in almost all fiction, but here was a book that was resolute in ignoring these conventions. To be sure, the immediate result is a fairly refreshing feeling of suspense. But these narrative conventions exist for a reason. Although *A Feast for Crows* has other shortcomings, I think one of the biggest reasons it wasn't as well received as the first three books was that without a sense of where the narrative is going, the reader doesn't feel any momentum. Since there's no plotline developing and advancing towards a climax, the reader realizes there's no reason why the intrigue surrounding the throne of Westeros can't go on indefinitely. And if the plot goes on indefinitely, then the individual events are completely deprived of meaning. In particular, one realizes that the characters can't win any victory that won't just be undone by further events two hundred pages later, so why bother rooting for them at all? When all is said and done, whoever is left standing in the ruins of Westeros will be swept aside by Daenerys and Jon Snow as they confront the evil out of the north, so isn't this something of a waste of time?

Incidentally, I believe this was also how Martin got the reputation as a killer of main characters. Floating in a vacuum of story, readers latched on to what they assumed were main characters only to have them unexpectedly swept aside. Initially, Eddard Stark and his son Robb seemed like central characters, yet with the benefit of hindsight even from a position only halfway through the series, it's obvious they are bit players. In a typically sized fantasy novel, they'd have a page or two of screen time. In fact, the actual main characters of the story, like Daenerys, are just as bulletproof as any normal story's protagonists.

The unpredictable and unstructured nature of the central plotline has a literal realism to it and I'm tempted to see it as a bold artistic statement on Martin's part, but alas all the evidence points to this being an unintended effect. This was originally supposed to be a trilogy, after all, but has defied every prediction its own author made regarding its eventual length and publication schedule. Martin surely was writing a conventional fantasy novel about an ancient evil and an exiled princess but somehow got distracted by what probably was summed up in some original one page outline in about one sentence ("Westeros monarchy weakened by infighting and succession problems"). Having

fallen in love with what was supposed to be a bit of window dressing, he has continually expanded its role within the series even though it threatens to completely drown out what the series was supposed to be about in the first place. Is it any wonder that he has suffered from the contemporary genre's most famous case of writer's block? I'm sure that long ago he planned what would happen to Daenerys and the Night's Watch, but now he feels obligated to give equal time to characters like Brienne who are likable yet serve little purpose to the central narrative and are instead dragged through increasingly arbitrary make-work scenes to keep them available for some later bit of relevance.

Although I've been critical, I will defend Martin of one charge frequently lobbed at fantasy authors. I don't think he's stretching things out to make more money. The typical pattern for fantasy series is to start out with an exciting and action packed first book and then to become ever more bogged down in extra viewpoint characters and minutiae. Although it's true *A Feast for Crows* is somewhat bogged down like this, really Martin deeply invests himself in the minutiae right from the start, and even the fourth book moves at a faster clip than typical doorstep fantasy. Likewise, where typical slow fantasy seems to get stuck always approaching but never reaching some critical point, Martin blasts through critical points all the time. The central plotline is a meat grinder that constantly chews up minor characters, spits them out, then pulls in more. If there's a record for the fictional work that kills the most named characters then this series is right up there with the *Iliad*.

I'm glad I read *A Song of Ice and Fire* but less because of the story itself and more because I find it interesting how unbalanced the story is. On one hand, it's probably a testament to how a work that does one or two things really well can become extremely popular even if it does other things very poorly. Writing about *Wheel of Time*, Adam Roberts attributed some of its popularity to "fans who want to know every atom of the imagined world" and I think something similar is at work here. On the other hand, I think that the series' weaknesses get magnified as the story goes on even if the quality of the books remains constant, leading me to suspect the series will never be again be as popular as it was when *A Storm of Swords* came out. Unfortunately for Martin, I think the series will only get harder and harder for him to write as he tries to provide some sort of climax and closure that justifies the endless profusion of aimless detail he's provided so far. I'm even a lot more skeptical that HBO can successfully translate it into an effective television show, although being forced to provide an abridged version might end up being beneficial.

Hopefully I'm wrong and Martin eventually manages to both finish the series and somehow produce a satisfying second half in the process, but I won't be holding my breath. Fortunately, looking back at the writers bearing Martin's influence who I mentioned before, it seems like they have each taken something good about the series, amplified it, and then coupled that with a more conventional narrative structure ("conventional narrative" sure sounds like an insult, but that's why reading Martin has been so helpful...breaking convention is a risky thing). Even if I never read any more of this series (the most likely possibility I'm afraid) I will at least be able to read other books that continue down the trail Martin blazed.

Wisconsin budget (2013-03-20 22:30)

Southern Wisconsin's families continue to work hard to make ends meet in an uncertain economy. The unemployment rate in Wisconsin as of February 2013 is high at 7.2 percent, while the national unemployment rate is 7.6 percent. As the economy struggles, much focus has been on increasing taxes to address our deficit and our debt. These tax increases would hit job creators, like those small manufacturers located in industrial parks in our communities, and hard-working families. Our local manufacturers and families are already forced to live under the strains of the current difficult economy. Asking them to pay more will hurt our local communities. What the federal government needs to do is stop spending too much. It simply can no longer afford to spend money that it doesn't have and take out more loans to pay for that spending. Preventing tax increases on 98 percent of taxpayers On January 2, 2013, taxpayers faced tax increases and automatic across-the-board spending cuts that were schedule to take effect as a result of last summer's debate about raising our nation's debt ceiling. These spending cuts, known as sequestration, would have resulted in a 10 percent reduction in Department of Defense programs and an 8 percent reduction in certain domestic federal government programs. These tax increases and automatic cuts in federal spending were referred to as the "fiscal cliff."

According to the Congressional Budget Office, going over the fiscal cliff would have substantially reduced the deficit; however, this restraint would have also reduced our nation's economic growth from 4.4 percent to negative 0.5 percent in 2013, putting us at risk of another recession. Fortunately, there was bipartisan consensus that action needed to be taken. Recognizing the importance of acting to prevent the expiration of current tax rates, the House passed H.R. 8, the American Taxpayer Relief Act of 2012, by a bipartisan vote of 257 to 167—with my support—on January 1, 2013. H.R. 8 prevented a tax rate increase on 98 percent of taxpayers and made these lower tax rates permanent so they would not expire again. H.R. 8 also makes permanent 97 percent of the tax relief provisions for small businesses enacted in 2001 and 2003. Without Congressional action to address this issue, the American people would have been hit with a \$4.4 trillion tax increase; instead revenues will increase by \$600 billion. In the end, the choice presented to Member of Congress was to either raise taxes by \$4.4 trillion or by \$600 billion—I voted for the latter. This bill also delays the Fiscal Year 2013 sequestration for two months, giving Congress the opportunity to focus the nation's attention on the fact that we are spending more money than we have. While not perfect, I supported H.R. 8 because this legislation prevents tax increases on 98 percent of taxpayers, or 114 million households, and delays the automatic across-the-board cuts to our armed forces and key priorities. The House had already passed legislation to prevent tax increases for every American family, and it is unfortunate that President Obama insisted on taking more from hardworking taxpayers. In addition, the House also passed legislation to replace the sequester with reasonable spending reductions, such as stopping fraud by eliminating government slush funds, putting an end to bailouts, and reducing waste and duplicative programs. Regrettably, the Senate failed to take action on this alternative to sequestration. Despite my concerns with other provisions in the bill, I commend my colleagues for limiting the damage as much as possible. At a time when families and small businesses are facing high gas prices and overall increases in the cost of living, the last thing taxpayers need right now or in the future is a tax increase. Now, we must return our attention to the real problem: Washington's out-of-control spending. This reckless spending drives the debt. And this debt is hurting the economy today. Unless the President gets serious about tackling spending, Americans will face a debt crisis—one that will threaten our most vulnerable in particular. I am hopeful the President will come around and agree to meaningful spending cuts and reforms which are critical if we are going to avert the debt crisis and get the economy growing. I have introduced several budgets that would get government spending under control and will continue putting forth my detailed solution in the upcoming budget this year. The Debt Ceiling and Sequestration On December 26, 2012, U.S. Treasury Secretary Timothy Geithner sent a letter to congressional leaders warning that the national debt would reach its limit of \$16.394 trillion on December 31, 2012. Accordingly, the federal debt did reach this limit on December 31, and the Treasury has since implemented "extraordinary measures" to meet federal payments for the immediate future. On January 14, 2013, Secretary Geithner sent an additional letter to House Speaker John Boehner, stating that the Treasury currently expects these extraordinary measures to exhaust as soon as mid-February, and urging further action from Congress and the President to ensure that the U.S. does not default on its financial obligations. Our debt is the product of massive spending increases that occurred under many Presidents and many Congresses over many years, but that does not mean we should or can continue on this unsustainable course. To tackle these fiscal challenges, we need real leadership, meaning a commitment to pay off the debt and balance the budget, and real solutions, rather than empty promises and speeches. The most important issue in this debate is not whether we should raise the debt limit, but instead how we can address our out of control government spending and start reducing our annual deficits and overall national debt. In the coming months, Congress will debate the best ways to address the debt ceiling and avoid across-the-board sequester cuts, which will now go into effect on March 1, 2013, unless action is taken to replace them. In this debate, we must return our attention to the real problem: out-of-control spending. Washington's reckless spending drives the debt and this debt is hurting the economy today. We'll never get our debt under control unless we tackle its main drivers: spending money we don't have. Unless we get at the heart of the problem, Americans will face a debt crisis – one that will threaten our most vulnerable in particular – and it is our responsibility to prevent such a crisis. I remain hopeful that leaders can rise to meet our generation's greatest challenge with specific solutions and responsible budgets. I will keep advancing solutions that deal directly with the drivers of the debt, help get our economy back on track, and ensure future generations a shot at the American Dream. The President's budget proposal for Fiscal Year (FY) 2013 At a time when strong leadership is needed in the White House, last year, President Obama proposed budget that, in the words of The Washington Post, "falls short." Failing to heed the warnings of economists and the concerns of our fellow Americans, the President's budget accelerates

our country down the path to bankruptcy. The House voted on President Obama's budget proposal for FY2013, and unanimously rejected it by a vote of 0 – 414, a clear indication that Republicans and Democrats alike did not believe the President put forth a credible plan to address America's challenges. No Budget, No Pay Act of 2013 Looking ahead to the President's budget proposal for FY 2014, on January 14, 2013, the White House announced that it will not meet the statutory deadline of submitting its budget proposal to Congress by February 4. The President has only met this deadline once since taking office. This, combined with the Senate's refusal to comply with the statutory requirement to pass a budget for nearly 4 years, is a true failure of leadership. To bring these failures to an end, the House passed H.R. 325, the No Budget, No Pay Act of 2013 by a vote of 285 to 144. This legislation allows the Treasury to borrow to only pay its bills coming due until May 18, 2013. At the end of that period of time, the debt limit would be increased by the amount that was borrowed to pay the government's bills until May 18, 2013. It also requires both houses of Congress to pass a budget as stipulated by federal law. Under this bill, if either the House or Senate fail to pass a budget, its members' pay will be withheld. H.R. 325 is currently pending in the Senate. I voted in favor of this bill because every family sets a budget to pay its bills. Congress should do the same. The House will comply with the budget law and we will not consider another debt-ceiling increase unless the Senate passes a budget. The House will not just keep raising the debt ceiling either. We need to take this opportunity to make a down payment on our debt reduction and point our country in the right direction. Path to Prosperity House Republicans have pledged to lead where the President has failed. The budget advanced by the House of Representatives on March 29, 2012 helps spur job creation today, stops spending money the government does not have, and lifts the crushing burden of debt. The Path to Prosperity cuts more than \$5 trillion in spending from the President's budget over the next 10 years, putting the budget on the path to balance and the economy on the path to prosperity. Specifically, the budget: Restores Economic Freedom – The Path to Prosperity fosters a better environment for private-sector job creation by lifting the debt-fueled uncertainty and advancing pro-growth tax reforms. Changes Washington's Culture of Spending – The budget stops Washington from spending money it does not have on government programs that do not work. It locks in spending cuts with enforceable spending controls. Strengthens Health and Retirement Security – The budget puts an end to empty promises from Washington, offering instead real security through real reforms. The framework established in this budget ensures no disruptions to existing health and retirement benefit programs for those beneficiaries who have organized their retirements around them, while at the same time building stronger programs that future beneficiaries can count on when they retire. Provides for the Common Defense – With American men and women in uniform currently engaged with a fierce enemy and dealing with emerging threats around the world, this budget takes several steps to ensure that national security remains the Federal government's top priority, including the rejection of proposals to make thoughtless, across-the-board cuts in funding for national defense. Lifts the Crushing Burden of Debt – The budget tackles the existential threat posed by rapidly growing government and debt, applying the nation's timeless principles to this generation's greatest challenge. It ensures that the next generation inherits a stronger, more prosperous America. It is unconscionable to leave the next generation with a crushing burden of debt and a nation in decline. The choice of two futures presented in the House-passed FY2013 budget is premised on the wisdom of the American people to build a prosperous future for themselves and for future Americans to come. Today, America is struggling — these are tough times and people are rightfully anxious about the future. But as the challenge grows, so does the opportunity to restore America's promise and prosperity. This budget recommits the federal government to the security of every American citizen's natural right to life, liberty and the pursuit of happiness, while fostering an environment for economic growth and private-sector job creation. This year, I will put forward a budget that meets the statutory deadlines and carries out these priorities.

WI immigration (2013-03-21 22:32)

The vast majority of Americans agree that our immigration system is broken. Those attempting to come to the country legally find themselves wrapped in endless paperwork and bureaucracy and, as a result, far too many continue to arrive in the United States unauthorized. Consequently, it is estimated that more than 11 million immigrants are currently living undocumented and without legal status in the United States. Our broken immigration system is unable to

efficiently and adequately serve those who seek to play by the rules, and as a result, it indirectly rewards those who break them. It is clear that our current immigration system is not working, and we deserve better. There are deeply held views on all sides of this issue, and rightly so. We are a nation of immigrants and people continue to flock to our country in pursuit of the American Dream. Unfortunately, the current system is failing both hardworking Americans and prospective immigrants – including those who are desperately seeking to be reunited with their families. We can no longer afford to neglect our broken immigration process. The Census Bureau assumes net immigration – meaning legal and illegal – will total 68 million immigrants by 2050. The non-partisan Center for Immigration Studies points out that these future immigrants plus their descendants will add an estimated 96 million residents to the U.S. population, accounting for three-fourths of our population growth from 2010 to 2050. A modernized and fully functioning system will maximize efficiency for all immigrants seeking to come to our country, reward those that have abided by the law and ensure that, in the future, respect for the rule of law yields the best outcome for those seeking to immigrate to America, and seek to resolve the problems that have led to the breakdown of our current immigration system. There is no doubt that an overhaul of our ineffective immigration system is long overdue and the time for a solution is now. In order to resolve the issues of our immigration system, several areas of immigration policy must be addressed. I will continue to work toward finding common sense solutions to repair the process and implementing reforms that will prevent a future breakdown of the system. This requires a multi-faceted approach that addresses stronger security to curb illegal immigration, modernization of our immigration laws, and respect for the rule of law in addressing the complex challenge of the undocumented population. First, I hope that with better border protection, we will be able to stem the flow of illegal immigration and restore the rule of law. We must ensure that our law enforcement officials have access to the resources, including technology and manpower, needed to enforce currently enacted immigration laws and protect our borders to help stop the smuggling of drugs, arms, and humans. Second, we need an employee verification system that allows employers to easily and accurately verify an employee's legal status in a timely manner. The faulty and cumbersome verification process we currently have continues to provide incentives for the use of fraudulent documents and puts many at risk of identity theft. It is needed to not only to provide employers with a safe haven, but to ensure that illegal immigration does not undermine the status and wages of those workers who come to our country on a valid visa. To do this, an employee's information must be safe from identity theft. Next, any system must be accurate and secure. A verification tool that is easily fabricated will not provide the assurance required that employers are not unintentionally employing illegal aliens. Lastly, a verification tool must be immediate. It can cause great disruption and difficulties in the employment process if employers and potential employees cannot get the documentation they need from the government. We must ensure that verification occurs immediately, and that employees are able to work and receive their paychecks. In addition to securing our borders and protecting employers and U.S. citizens from identity theft with a reliable employee verification system, I believe that any reforms to immigration policies should include expanding access to visas for seasonal and temporary labor. Wisconsin, for example, relies on seasonal labor for agriculture and other industries, but due to a lack of seasonal H-2B visas, some Wisconsin businesses face annual labor shortfalls. Additionally, I believe a temporary guest worker program is one component of reform that could help us gain greater control of immigration. Providing a way to legally link employers with immigrant workers and building a streamlined, safe, and efficient visa process will provide businesses with needed workers and relieve pressure on the borders. We must also seek to ensure that the most highly qualified foreign graduates of American universities with advanced degrees in science, technology, engineering, and math (STEM) fields have adequate opportunity to remain in the United States and enter the workforce here. Many of the world's best students receive their education in America. We could boost economic growth, create jobs, increase our competitiveness, and spur innovation by making it possible for U.S. employers to more easily hire foreign graduates of American universities in the fields of science, technology, engineering, and math. This way, these graduates apply their American education here in the United States, rather than take their American education to our foreign competitors. Over the past ten years, growth in STEM jobs was three times the rate as non-STEM jobs, and these occupations are projected to grow more than twice as fast through 2018. American employers have expressed concern regarding the availability of high-skilled STEM workers and have urged reform of the visa system to help them fill these empty positions. Nevertheless, in order to ensure the career prospects of graduating American STEM students are not diminished, any legislation should require employers seeking to sponsor foreign STEM graduates to first complete labor certification. Labor certification protects U.S. workers and the U.S. labor market by ensuring that foreign workers seeking immigrant visa

classifications are not displacing equally qualified U.S. workers. We must also streamline the system in a way that allows for efficiency, ensures fairness, and considers family unification, but simultaneously ensures our employers can access the labor and skilled workers needed to run their businesses. Immigration legislation must include a fair and reasonable way to address the more than 11 million undocumented immigrants currently in the United States, of which over seven million are employed, contributing members of our economy. This includes finding a way forward for the "DREAMers" – unauthorized immigrants that came to the United States as children through no fault of their own, grew up in our country, and are now seeking to pursue an advanced degree in America or enlist in our military and become contributing adult members of our society. In addition, the current backlog for family-sponsored visas is so vast that it could take up to 11.5 years for the visa to be processed. The lengthy waiting periods for visa consideration often induce desperate family members to break the law and enter the country illegally in order to be reunified with their family members in the United States. Improving this process, expanding the work-based system, and creating a functional avenue of access will help to stem the flow of illegal immigration moving forward. I will continue to advocate for common sense reforms to our broken system that for far too long has been failing Americans and those seeking to legally immigrate to our country to pursue the American Dream. I have long been supportive of efforts to reform our immigration policies in a comprehensive, responsible, and methodical way, with each step building on the last. Effective immigration reforms must include strong border security provisions, an enforceable guest worker program, a secure employee verification system, and fair and workable provisions to address the unauthorized immigrants currently in the U.S., as well as the lengthy backlog of those waiting for their visas to be processed. In the past, I have supported initiatives that would have accomplished these goals, and I will continue to do so as my colleagues and I consider legislation in the 113th Congress.

PS4 impressions (2013-03-21 23:59)

I was off in another classroom so I didn't have time to write this...

The good

Let's talk about the good first. For one thing, games like Suckerpunch's *Infamous: Second Son*, Guerilla's *Killzone: Shadow Fall*, Evolution Studios' *Drive Club*, and even Sony's first-party *Knack* look promising, if not necessarily miles ahead of the current generation's offerings.

We were thrilled to see Jonathan Blow on stage talking about *The Witness*, the *Braid* successor that's been in development for three years, not to mention Blizzard's surprise reveal of *Diablo 3* for PS4 and PS3.

Even Bungie's presence, while predictable given the dearth of information presented during *Destiny*'s "reveal" last week, was well-received. Same goes for Ubisoft's *Watch Dogs*; expected, but welcome.

On the hardware side, TechRadar is perhaps most excited by the PlayStation 4's synergy with the PS Vita. Sony has been teasing true connectivity between its portable and living room consoles for years, but it looks like that may actually come to pass with the PS4 and PS Vita.

Other PS4 details - like the 8GB of memory, or the streaming demos thanks to Sony's acquisition of Gaikai - stood out as truly next-gen features. Nintendo critics will no doubt be able to point to these and other PS4 details as signs that the Wii U is not a truly next-gen system, and it's starting to seem like they may have a point.

The controller itself, the DualShock 4, brings innovation to the table while not abandoning the core features that PlayStation gamers love about the DualShock pads.

It's got all the same buttons, plus a touchpad in the middle, a light bar across the top (presumably for motion controls), a 3.5mm headphone jack, a "share button," and some aesthetic improvements, like the blessedly concave control sticks. Frankly, it looks great to us.

The missing

Unfortunately, there were plenty of PS4 details on our wish list that Sony somehow just couldn't fit into its two-hour presentation.

Most obviously missing was the console itself - we didn't even catch a glimpse of what the new system will actually look like. We actually got *deja vu* from the Wii U's announcement at E3 a couple years back, when Nintendo showed

the GamePad controller, but not the console. Confusion followed then, as it's sure to here.

The PlayStation 4's price and specific launch dates were conspicuously left out, as well.

On the topic of launch games, we liked what we saw, but one game was frustratingly absent, as it has been for years: The Last Guardian, the Team Ico follow-up that we're starting to think will never be released at all.

The format of PS4 games is also unknown; besides digital downloadable releases, it's assumed that the PlayStation 4 will use Blu-ray, though Sony didn't actually mention as much. (UPDATE: Sony revealed after the press event that it would include Blu-ray support).

They also didn't mention rumors that the PS4 will feature DRM that will make it incompatible with used games, demolishing a large portion of the video game retail market - though we didn't really expect them to.

To top it off, backwards compatibility with legacy PlayStation titles was mentioned briefly and vaguely but not expanded upon. It's possible that the PS4 will support backwards compatibility via the cloud at some point, but it seems unlikely that it will do so at launch.

A new hope?

That said, what was shown of the PlayStation 4 has us salivating for more - more games, more details, more specifics on hardware, you name it.

Sony has clearly got a drawn-out PR plan in mind for the PS4, as the absence of the actual system itself at Wednesday's announcement proves.

But with a release window of "holiday 2013," sneakily inserted right at the end of the PS4 announcement, they can only stretch it out so long before the details are revealed and the PlayStation 4 is in our living rooms.

Hi there, I discovered your website by means of Google whilst searching for a comparable subject, your website got here up, it appears great. I have bookmarked it in my google bookmarks.

Hi there, just turned into aware of your weblog via Google, and found that it is truly informative. I'm going to watch out for brussels. I will be grateful for those who proceed this in future. Numerous people will probably be benefited out of your writing. Cheers!

Here again you want to find or even create an angle or slant in which you can take headline news and 'incorporate' it into a post you are composing. Women who are planning the wedding of their dreams can find plenty of fantastic information in Bride's magazine. However, today, the wedding photographers capture photographs of moments that are precious and that you would cherish all your life; and, when you least expects the wedding photographer to capture you.

openSUSE 12.3 (2013-03-22 01:59)

KDE 4.10

3.7 kernel

libreoffice 3.6.5

x.org 1.14

Installed openSUSE 12.3 on the 32-bit PC + old 64-bit PC. KDE 4.10 runs slightly faster than KDE 4.6 on 32-bit, because the footprint is somewhat lower. The applications like Libreoffice speed up once opened on 32-bit. Installing VLC also installs codec fo Amarok.

1. The Ext4 filesystem now supports big allocation blocks (e.g. 1, 2, 3). The technique, known as bigalloc, bundles the 4K blocks used to store data into clusters of up to 1 MB. This reduces administrative overhead when saving large files and should significantly improve performance in some scenarios.
2. The kernel developers have extended the TCP stack of Linux 3.2 to provide "Proportional Rate Reduction" (PRR) support.
3. A number of changes in Linux 3.3 are intended to take care of various problems that can, in certain situations, cause systems to temporarily stall when the kernel is writing large amounts of data to a slow disk (such as a USB flash drive)
4. The new code also allows this kind of migration to be paused, cancelled and restarted after a crash. The Ext4 code gained a new mechanism for resizing Ext4 filesystems
5. From Linux 3.4, kernels that are compiled for x86-64/x64 processors can offer an "x32" ABI (Application Binary Interface) to programs (1 and others). Programs compiled for this ABI can access the 64-bit registers and data paths of 64-bit processors

6. Linux 3.5 eliminates the cause of the latest leap second bug which affected many systems earlier this month. A major development by Eric W. Biederman, "User namespace enhancements" makes possible a cleaner separation of user and group IDs between host and container. As a result, users who have root privileges in a container no longer, for example, have full access to all files in the directories /proc/ and /sys/.
7. Ext4 can now add CRC32 checksums to many parts of its metadata and use them to reveal corruptions
8. The teaming driver that was integrated in Linux 3.3 now offers a load balancing feature
9. With Linux 3.6 the ext4 code no longer stores quota information in visible files, but instead stores it in the form of hidden inodes in the metadata.
10. Device mapper is now able to utilise the RAID 10 functionality provided by the MD subsystem.
11. the kernel can now be configured to not follow hardlinks and softlinks in directories with a set "sticky" bit (such as /tmp/), when those links point somewhere higher up the directory tree. As LWN.net explains in this article, this feature, which can be activated via sysctl, puts a stop to a common trick used by attackers to escalate their privileges by using background services running as root.

Max Weber is evil (2013-03-22 04:14)

Rereading Max Weber's *The Protestant Ethic and the Spirit of Capitalism* after a gap of many years reminded me of the misguided methodology of the 'Evil Ideologists' – those who believe that the world's troubles have their roots in a 'jihadist' ideology which has suddenly and inexplicably descended on the Muslim world and infected the brains of thousands of young men, driving them to take up arms and bombs against 'Western civilisation'. Weber is rather more subtle, of course, and he qualifies his theory enough to protect himself from any charge of naivety. The thrust of his argument, in case you are not familiar with it or have forgotten it, is that the spirit of capitalism sprang from Protestant Asceticism, which combined the essential elements of frugality and sustained dedication to a 'calling' in the practical world, regardless of whether the combination led to great individual wealth. With time the religious element receded, leaving as its residue the Protestant work ethic, which holds that man's duty in this world is to do a job well, invest and take advantage of economic opportunities that arise. The link between Protestantism and acquisitive capitalism of the bourgeois kind which dominates the developed world is almost indisputable, but Weber fails to explain convincingly why Calvinism, or more generally Protestant Asceticism, became so widespread in the early modern period. He presents early capitalism as an accidental consequence of an ideology which started out as a means to secure eternal salvation, or at least which gave the adherent the illusion that he had a better than average chance of eternal salvation. But in the real world, people have a vast range of ideologies to choose from, and their choice depends less on what is currently available in the marketplace of ideas than on what suits their economic, political and social interests at any given moment. The ideology of frugality and dedication to hard work has always been available, but few people adopted it before the 16th century and even then mainly in the most advanced economies of Europe – England, Holland and parts of France. What we need to look at is the motives of the individuals who chose Calvinism over Lutheranism or Catholicism and try to establish what practical benefits it offered them in the real world, where most people live. Is it not more likely that, once economic and political circumstances made it possible for individuals without special privileges to accumulate capital through hard work, those individuals chose and adjusted a religious philosophy which justified their abandonment of traditional economic morality? I think so. Similarly, versions of militant Islamism have always been available in the repertoire of variants of Islam (historically represented by the Khawarij, the Qarmatians and Ibn Taimiya, for example) but large numbers of Muslims were not inclined to adopt those ideologies until the circumstances of the real world made them attractive. The social, political and economic conditions came first and the popularity of the ideologies followed.

Mac OS X VMware images (2013-03-24 08:04)

I had someone ask me about Mac OS 10.8. Of course, I told him about Darwin kernel, and I used an obsolete MAC OS X PowerPC and Intel Macs at school. That's why I have been searching for a VM image of Mac OS X on the internet. That is the only way I can use it other than find very risky IBM-PC version of Mac OS 10.8. VMware images of Mac OS X are hard to find. File sharing sites succeeded Torrents and no live downloads. I dislike torrenting.

Meanwhile, I just suggested I knew PC-BSD 9.1 pretty well running KDE 4.9 and Gnome 2.32.2, Libreoffice, Firefox, and WINE. Right now, PC-BSD 9.1 is installed on my fastest Intel Core 2 Extreme 980x with 8 GB RAM, Radeon HD 5970 computer.

Australian, United Kingdom same sex union (2013-03-24 17:37)

One thing that Australian Government is right and United States Government is wrong is Australians have same sex unions. They call it unions. Their Marriage Act of 1961 defines marriage as a man and a woman and that never changed in dominant Labor Party parliament numbers. Not a single society in the long history of mankind has ever attempted to substitute homosexual relationships for traditional marriage.

Causes of homosexuality

Homosexuality has a number of causal factors that influence its ultimate origination in individuals; these factors will be addressed shortly. In addition, homosexuality has a variety of effects on individuals and society. Next, some of the historical events, religious matters, and legal matters relating to homosexuality will be covered. Finally, the latter part of the 20th century has seen a large body of research on the causes and effects of homosexuality.

Biblical statements concerning homosexuality

The prophet Moses authored the book of Leviticus

For more information please see: Homosexuality and biblical interpretation and Homosexuality and the Bible and Atheism and homosexuality

Below are some Bible verses that condemn homosexuality:

- Leviticus 18:22 - You shall not lie with a male as one lies with a female; it is an abomination.
- Leviticus 20:13 - If there is a man who lies with a male as those who lie with a woman, both of them have committed a detestable act; they shall surely be put to death. Their blood guiltiness is upon them.
- Romans 1:26-27 - For this reason God gave them over to degrading passions; for their women exchanged the natural function for that which is unnatural, and in the same way also the men abandoned the natural function of the woman and burned in their desire toward one another, men with men committing indecent acts and receiving in their own persons the due penalty of their error.
- I Corinthians 6:9 (NIV) - Do not be deceived: Neither the sexually immoral nor idolaters nor adulterers nor male prostitutes nor homosexual offenders nor thieves nor the greedy nor drunkards nor slanderers nor swindlers will inherit the kingdom of God.

- I Timothy 1:8-11 (NASB) - "But we know that the Law is good, if one uses it lawfully, realizing the fact that law is not made for a righteous person, but for those who are lawless and rebellious, for the ungodly and sinners, for the unholy and profane, for those who kill their fathers or mothers, for murderers and immoral men and homosexuals and kidnappers and liars and perjurers, and whatever else is contrary to sound teaching, according to the glorious gospel of the blessed God, with which I have been entrusted."

Homosexuality - Genetics, Religious Upbringing, Culture, Sexual Abuse, and Choice

For more information please see: Causes of Homosexuality

▣ Columbia University psychiatry professors Drs. William Byrne and Bruce Parsons stated: "There is no evidence that at present to substantiate a biological theory. [T]he appeal of current biological explanations for sexual orientation may derive more from dissatisfaction with the present status of psychosocial explanations than from a substantiating body of experimental data".

Terminology

Homosexuality is sometimes also defined in terms of an attraction, preference, orientation, or identity. The term "orientation" is particularly favored by those who are promoting public acceptance of homosexuality.^[2]

Genetics and Claims of the immutability of homosexuality

For more information please see: Homosexuality and Genetics

A common argument is that an inclination to homosexuality is inborn and immutable. It is widely believed that the public will become more accepting of homosexuality if they are convinced that it is inborn and immutable. For example, neuroscientist and homosexual Simon Levay stated: "...people who think that gays and lesbians are born that way are also more likely to support gay rights."^[3]

Research into the issue of the origins of homosexuality suggests that adoptive brothers are more likely to both be homosexuals than the biological brothers, who share half their genes which suggests that homosexuality is not genetically caused. ^{[4][5]} This data prompted the journal *Science* to report "this . . . suggests that there is no genetic component, but rather an environmental component shared in families".^{[6] [7]} However, in regards to psychosocial and biological theories in regards to the origin of homosexuality, Columbia University psychiatry professors Drs. William Byrne and Bruce Parsons stated in 1994: "There is no evidence that at present to substantiate a biological theory. [T]he appeal of current biological explanations for sexual orientation may derive more from dissatisfaction with the present status of psychosocial explanations than from a substantiating body of experimental data".^[8]

Dr. Tahir I. Jaz, M.D., Winnipeg, Canada states: "The increasing claims of being "born that way" parallels the rising political activism of homosexual organizations, who politicize the issue of homosexual origins. In the 1970s, approximately ten percent of homosexuals claimed to be "born homosexual" according to a large scale survey....However, in a survey in the 1980s, with the homosexual rights movement increasingly becoming active, thirty-five percent claimed to be born that way."^[9]

Genetics, Evolutionary Paradigm, and Creation Science

For more information please see: Genetics, Homosexuality, Evolutionary Paradigm, and Creation Science and Richard Dawkins on homosexuality

☞ The atheist Richard Dawkins speculates that a "gay gene" causes homosexuality, but science has not discovered such a gene.^[10] See: Causes of homosexuality

In 1993, Professor Miron Baron, M.D., the renowned medical researcher and Professor at Columbia University, wrote in *BMJ* (British Medical Journal) that there is a conflict relative to the theory of evolution and the notion of genetic determinism concerning homosexuality. Dr. Baron wrote "...from an evolutionary perspective, genetically determined homosexuality would have become extinct long ago because of reduced reproduction."^[11] In the United States, liberals are more likely to believe in the theory of evolution.^[12] Also, in the United States, twice as many liberals as conservatives (46 % versus 22 %) believe people are born homosexual and liberals generally have more favorable opinions about homosexuality.^[13] Given Dr. Miron Baron's commentary about homosexuality, many

American liberals are inconsistent on the issues of evolution and homosexuality. The atheist Richard Dawkins speculates that a "gay gene" causes homosexuality, but science has not discovered such a gene.^[14]

An individual's beliefs regarding creation science/creationism and the theory of evolution appear to influence their views on homosexuality. Creationist scientists and creationist assert that the theory of evolution cannot account for the origin of gender and sexual reproduction.^[15] Creation Ministries International states: "Homosexual acts go against God's original design of a man and a woman becoming one flesh — see Genesis 1 and 2, endorsed by Jesus Himself in Matthew 19:3–6."^[17] In addition, the vast majority of creation scientists reject the notion of genetic determinism concerning the origin of homosexuality.^[18]

Since World War II a majority of the most prominent and vocal defenders of the evolutionary position which employs methodological naturalism have been atheists.^[19] The Barna Group found regarding atheism and morality that those who hold to the worldviews of atheism or agnosticism in America were more likely, than theists in America, to look upon the following behaviors as morally acceptable: illegal drug use; excessive drinking; sexual relationships outside of marriage; abortion; cohabitating with someone of opposite sex outside of marriage; obscene language; gambling; pornography and obscene sexual behavior; and engaging in homosexuality/bisexuality.^[20]

Religious Upbringing and Culture Can Strongly Affect Rates of Homosexuality

For more information please see: Religious Upbringing and Culture Affects Rates of Homosexuality

Dr. Neil Whitehead is a research scientist and biochemist from New Zealand and his wife Briar Whitehead is a writer.^[21] Dr. Whitehead coauthored a book with his wife entitled *My Genes Made Me Do it - a scientific look at sexual orientation* which argues that there is no genetic determinism in regards to homosexuality (homosexuals are "not born that way") and that there is abundant documentation that individuals are able to leave homosexuality and become heterosexuals.^[22]

☞ Homosexuality appears to be rare in Orthodox Jews.

Dr. Whitehead and Briar Whitehead declared:

" If homosexuality were significantly influenced by genes, it would appear in every culture, but in twenty-nine of seventy-nine cultures surveyed by Ford and Beach in 1952, homosexuality was rare or absent. It was very rare in the Siriono, even though there were no prohibitions on homosexual relationships in that culture. The researcher observed only one man displaying slight homosexual traits but apparently not sexually involved with another man. Homosexuality appears to be rare among Orthodox Jews [Orthodox Judaism forbids homosexuality], so much so that learned rabbis, the interpreters of Jewish law, usually allowed men to sleep in the same bed, because likelihood of sexual contact was considered negligible. Kinsey also found very low homosexual incidence among Orthodox Jews... This evidence comes from missionaries who commonly spend 25 years of their lives living in one culture, far more than almost any anthropologist....Overall they can be considered as reliable witnesses. For example, in contrast to groups like the Sambia in the New Guinea highlands, where homosexuality was compulsory, only about 2-3 percent of Western Dani (also in the New Guinea highlands) practiced it. However, in another group of Dani who were genetically related, homosexuality was totally unknown. Missionaries report that when they were translating the Bible into Dani for this group, their tribal assistants, who knew their own culture intimately, were nonplused by references to homosexuality in Romans 1; they did not understand the concept. Another missionary, with the same group for 25 years, overheard many jests and sexually ribald exchanges among the men, but never a single mention of homosexuality in all that time. When Dani went to help with missionary work among the Sambia, they were astounded at some of the homosexual practices they saw for the first time. Although it is always difficult for

a foreigner to be completely sure whether a rare and stigmatized behavior exists, it is certainly true that if three such different experiences of homosexuality can occur in groups of people so closely related genetically, genetically enforced homosexuality is an impossibility.^[23]

”

Dr. Alice Dreger is a professor of clinical medical humanities and bioethics at Northwestern University's Feinberg School of Medicine. She has written for *The New York Times*, *The Wall Street Journal*, *The Washington Post* and *The Atlantic*.

On December 4, 2012 Dr. Degrer wrote in the *The Atlantic*:

“ Barry and Bonnie Hewlett had been studying the Aka and Ngandu people of central Africa for many years before they began to specifically study the groups' sexuality... Is the strong cultural focus on sex as a reproductive tool the reason ...homosexual practices seem to be virtually unknown among the Aka and Ngandu? That isn't clear. But the Hewletts did find that their informants – whom they knew well from years of field work – “were not aware of these practices, did not have terms for them,” and, in the case of the Aka, had a hard time even understanding about what the researchers were asking when they asked about homosexual behaviors.

The Ngandu “were familiar with the concept” of homosexual behavior, “but no word existed for it and they said they did not know of any such relationships in or around the village. Men who had traveled to the capital, Bangui, said it existed in the city...

Given all this, the Hewletts conclude, “Homosexuality and masturbation are rare or nonexistent [in these two cultures], not because they are frowned upon or punished, but because they are not part of the cultural models of sexuality in either ethnic group.”

The finding with regard to homosexuality is perhaps not that surprising. As the Hewletts note, other researchers have documented cultures where homosexuality appears not to exist.^[24]

”

In 1976, Gwen J. Proude and Sarah J. Green published a study in the journal *Ethnology* which showed a positive correlation between cultures which accepted or ignored homosexuality in their cultures and cultures which were more likely to have homosexuality be more common.^[25]

In 1993, M. Baron wrote in the *BMJ* (British Medical Journal):

“ Some cultures - for example, the Assyrian and Graeco-Roman - were more tolerant of homosexuality. The behavior was practiced openly and was highly prevalent. Sexual patterns are to some extent a product of society's expectations, but it would be difficult to envisage a change in the prevalence of the genetic trait merely in response to changing cultural norms.^[26] ”

☞ Dennis Prager

Dennis Prager wrote the following regarding Orthodox Judaism and homosexuality: “ In the Syballine Oracles, written by an Egyptian Jew probably between 163 and 45 B.C., the author compared Jews to the other nations: The Jews “are mindful of holy wedlock, and they do not engage in impious intercourse with male children, as do Phoenicians,

Egyptians, and Romans, specious Greece and many nations of others, Persians and Galatians and all Asia." And in our times, sex historian Amo Karlen wrote that according to the sex researcher Alfred Kinsey, "Homosexuality was phenomenally rare among Orthodox Jews."^[27] "

Herbert Hendin wrote in the *Journal of American Academy of Psychoanalysis* the following:

" Anthropologists had observed that relatively uncompetitive primitive cultures such as those that do not distinguish or reward the best hunters in distinction to the other men in the tribe have virtually no homosexuality."^[28] "

Individuals Raised in Large Cities Versus Individuals Raised in Suburbs, Towns, and Countrysides

In 1994, the book *Sex in America: A definitive survey* by Robert T. Michael, John H. Gagnon, Edward O. Laumann, and Gina Kolata stated the following:

" We discovered that people who were raised in large cities were more likely to be homosexual than people who were raised in suburb, towns, or the countryside. This relationship also showed up in the General Social Survey, an independent national sample."^[29] "

The aforementioned authors Dr. Whitehead and Briar Whitehead similarly wrote:

" There is a much higher incidence of homosexuality among those who have been raised in large cities, rather than in rural areas, arguing that the environment is much more powerful than genes in the development of homosexuality."^[30] "

Failure of Experiments to Show Genetic Determinism For Homosexuality

For more information please see: Failure of Experiments to Show Genetic Determinism For Homosexuality

Dr. Dean Hamer is a researcher often cited to show that there is empirical data supporting the notion of genetic determinism in regards to homosexuality. News organizations like National Public Radio and Newsweek have done news stories regarding his work.^[31] In respect to the press trumpeting various findings genetics-of-behavior research uncritically the science journal *Science* stated the following in 1994:

" Time and time again, scientists have claimed that particular genes or chromosomal regions are associated with behavioral traits, only to withdraw their findings when they were not replicated. "Unfortunately," says Yale's [Dr. Joel] Gelernter, "it's hard to come up with many" findings linking specific genes to complex human behaviors that have been replicated. "...All were announced with great fanfare; all were greeted unskeptically in the popular press; all are now in disrepute."^[32]"

Martin A. Silverman, M.D. wrote regarding a famous study of Dr. Dean Hamer:

" On July 16, 1993, it was reported in *Science* (pp. 291, 321) that geneticist Dean Hamer and his team at the National Cancer Institute had reported on a study involving 40 pairs of brothers both of whom were gay that had led them to conclude that they had discovered a factor on the X chromosome through which gayness was genetically transmitted to them from their mothers. This was hailed as proof that homosexuality in men is biological in origin. Two years later, however, Eliot Marshall reported in *Science* (June 30, 1995, p.268) George Ebers and George Rice of the University of Western Ontario had unsuccessfully attempted to replicate Hamer's findings and had "found no evidence that gayness is passed from mother to son" genetically. He also reported that the Office of Research Integrity in the Department of Health and Human Services was investigating Hamer's work."^[33] "

In May of 2000, the American Psychiatric Association issued a fact sheet stating that "...there are no replicated scientific studies supporting a specific biological etiology for homosexuality."^[34]

Given the existence of ex-homosexuals and given the existence of human cultures where homosexuality has apparently not existed, the position that homosexuality is ultimately a choice in individuals or at the very least can be a choice in individuals has strong evidential support.

Volition as a Causal Factor of Homosexuality - Homosexuality as a Choice

In regards to the issue of homosexuality and choice, given the existence of ex-homosexuals and given the existence of human cultures where homosexuality has apparently not existed, the position that homosexuality is ultimately a choice in individuals or at the very least can be a choice in individuals has strong evidential support. In short, there is a strong argument that one can leave homosexuality. Also, in 2012 ABC News reported concerning actress Cynthia Nixon: "Cynthia Nixon stands by her statement that she is gay by choice, despite the backlash she's received from members of the gay community."^[35] In addition, given that the homosexual population has significantly higher rates of many diseases and the homosexual population also has significantly lower rates of various measures of mental health it can be strongly argued that engaging in homosexual acts is a bad choice for individuals. Another other factor that makes engaging in homosexual acts a bad choice for individuals is the significantly higher rates of domestic violence in homosexual couples. In addition, according to experts homosexual murders are relatively or quite common and often homosexual murders are very brutal. Also, the homosexual population has a greater propensity to engage in illegal drug use.

A 2003 poll done by Ellison Research of Phoenix, Arizona stated that 82 % of all American Protestant ministers agreed with the statement "homosexuality is a choice people make".^[36]

Dr. Nadia El-Awady reflects the view of many adherents of Islam when he stated the following:

" Much research has been done over the years to discover the scientific origins of homosexuality. Mostly it has been to disprove the fact that homosexuality is a matter of choice."^[37] "

The Russian Orthodox Church view is that homosexuality is a choice.

The Roman Catholic Church's position is that having homosexual desires can be a choice in individuals but having homosexual desires is not a choice in respect to all individuals.^[38]ze^[39] However, according to the Vatican individuals should not engage in homosexual acts as they are acts of serious depravity.^[40]

Jews offering new alternatives to homosexuality: *Jews Offering New Alternatives for Healing*, is a non-profit international organization dedicated to educating the world-wide Jewish community about the social, cultural and emotional factors which lead to same-sex attractions. JONAH works directly with those struggling with unwanted same-sex sexual attractions (SSA) and with families whose loved ones are involved in homosexuality. ^[41] They also serve the entire community of non-Jewish individuals and families in a manner which will not threaten their personal religious beliefs.

St. Paul defends his preaching (Giovanni Ricco)

For more information please see: Ex-Homosexuals and Overcoming Homosexuality and Resources on becoming a Christian

In regards to the question of whether or not homosexuality is a permanent condition, one of the earliest historical records regarding of the existence of ex-homosexuals is a letter of the Apostle Paul to the Corinthian Christian church. The Apostle Paul taught that homosexuality is a sin when he wrote the following:

“Do not be deceived: Neither the sexually immoral nor idolaters nor adulterers nor male prostitutes nor homosexual offenders nor thieves nor the greedy nor drunkards nor slanderers nor swindlers will inherit the kingdom of God. And that is what some of you were. But you were washed, you were sanctified, you were justified in the name of the Lord Jesus Christ and by the Spirit of our God.” - I Corinthians 6:9-11 (NIV) ”

Today people still report leaving homosexuality and becoming heterosexual through their Christian faith.^{[42][43][44][45][46] [47][48] [49]}

Ex-Homosexual and ex-"gay rights" leader Michael Glatze speaking to the mother of Matthew Shepard.

Peter LaBarbera is the President of Americans for Truth which is a organization which counters the homosexual agenda. Peter LaBarbera stated the following regarding Christian ex-homosexuals who reported being transformed by the power of God:

" Another factor from my experience as a close observer of the "ex-gay" phenomenon is that many former homosexuals do not linger in "reparative therapy" programs, or participate in them at all. They attribute their dramatic and (relatively) rapid transformation to the power of God, and likely would not show up in a study of this kind. In fact, these "unstudied" overcomers would appear to be the most successful ex-homosexuals because they've moved on with their lives — as "reborn" Christians move on after overcoming any besetting sin.^[50] "

In respect to Peter LaBarbera's statement above regarding homosexuals overcoming homosexuality through the power of God, in 1980 a study was published in the *American Journal of Psychiatry* and eleven men participated in this study. The aforementioned study in the *American Journal of Psychiatry* stated that eleven homosexual men became heterosexuals "without explicit treatment and/or long-term psychotherapy" through their participation in a Pentecostal church.^[51] The results of this study are not surprising since Christian faith has shown itself to be effective in combating drug addiction. For example, Christian group Teen Challenge reported the following:

" Teen Challenge claims of a 70 % cure rate for the drug addicts graduating from their program attracted the attention of the U.S. Federal Government in 1973. Most secular drug rehabilitation programs only experienced a cure rate of 1-15 % of their graduates. The National Institute on Drug Abuse (NIDA), part of the U.S. Department of Health, Education, and Welfare, funded the first year of this study to evaluate the long term results of the Teen Challenge program.^[52] "

Teen Challenge has a number of studies that indicate the high effectiveness of their drug treatment program compared to other programs.^[53] Studies indicate that consumers of secular counseling psychology for alcoholism receive hardly any benefit at all.^{[54][55]} The Apostle Paul in a letter to the church of Corinth indicated that Christians were able to overcome being drunkards through the power of Jesus Christ (I Corinthians 6:9-11).

Dr. Whitehead and Briar Whitehead state in their aforementioned book the following regarding ex-homosexuals overcoming homosexuality:

" The sexology literature reports a huge number of examples of change of all degrees from homosexuality to or toward heterosexuality. These studies have been so numerous that West (a gay man) in 1977 took an entire chapter in his classic book, *Homosexuality Re-examined*, to review them, and commented: "Although some militant homosexuals find such claims improbable and unpalatable, authenticated accounts have been published of apparently exclusive and long-standing homosexuals unexpectedly changing their orientation." West mentions one man who was exclusively homosexual for eight years, then became heterosexual...

Another well known author in the field, Hatterer, who believes in sexual orientation change, said, "I've heard of hundreds of ... men who went from a homosexual to a heterosexual adjustment on their own."^[56] "

The classic Biblical commentator Matthew Henry wrote the following regarding the forgiveness and sanctification in Christ for those who repent of the above sins listed in the letter of Paul to the Corinthians (which includes the sin of homosexuality):

" How glorious a change does grace make! It changes the vilest of men into saints and the children of God. Such were some of you, but you are not what you were. You are washed, you are sanctified, you are justified in the name of Christ, and by the Spirit of our God. Note, The wickedness of men before conversion is no bar to their regeneration and reconciliation to God. The blood of Christ, and the washing of regeneration, can purge away all guilt and defilement. Here is a rhetorical change of the natural order: You are sanctified, you are justified. Sanctification is mentioned before justification: and yet the name of Christ, by which we are justified, is placed before the Spirit of God, by whom we are sanctified. Our justification is owing to the merit of Christ; our sanctification to the operation of the Spirit: but both go together.^[57] "

Hate Crime Law Misapplied to Ex-homosexual

Homosexual activists and liberals have become angered in regards to ex-homosexual events and activities.^{[58]e[59]} In

addition, the Center for Reclaiming America cited the following account of how a hate crime statute was egregiously applied to an ex-homosexual:

" In Madison, Wisconsin, a recovered homosexual who had left the "gay" lifestyle to start a family got into a heated discussion with an open homosexual about homosexuality at a gas station. The ex-"gay" man, David Ott, was holding his child in his arms during the entire incident, and neither man touched the other. The homosexual activist later told police he had felt threatened by Ott, and local prosecutors charged the man with "disorderly conduct" with a "hate crimes" enhancement. The "hate crime" aspect, stemming from Ott's belief that homosexuality is morally wrong, raised the potential fine from \$1,000 to \$10,000, and jail time went up from a possible 90 days to one year. Fearing the possibility of substantial jail time, Ott settled, and received 50 hours of community service plus a mandatory attendance at "tolerance" sessions conducted by lesbians at the University of Wisconsin at Madison. A ground rule for the session was the premise that homosexual behavior is not immoral.

The entire process cost Ott almost \$7,000 in legal fees.^[60]

2006 Survey Finds Homosexual Men Seek to Become Ex-homosexuals Often Do So to Heal Emotional Pain or For Spiritual Reasons

A 2006 survey finds homosexual men seek to leave homosexual lifestyle to heal emotional pain and for spiritual reasons rather than outside pressure. In addition, there is other data that supports the above 2006 survey findings.

Dr. Alex D. Montoya wrote: "The Christian needs to befriend and witness to the homosexual with such love, compassion, and wisdom that such will respond to the saving grace of God."^[61]

Homosexuality and the Bible

In respect to homosexuality and the Bible, sound Bible exegesis and Bible exposition demonstrates that the Bible condemns homosexuality.^[62]¹ In addition, Christian apologist JP Holding refutes various arguments that assert that the Bible does not condemn homosexuality.^[66]² In his essay which examines the biblical passages regarding homosexuality, Pastor and Associate Professor of Pastoral Ministries at The Master's Seminary Dr. Alex D. Montoya states that "The Christian needs to befriend and witness to the homosexual with such love, compassion, and wisdom that such will respond to the saving grace of God."^[71]

Biblical City of Sodom, Homosexuality, and Archaeology

The Bible clearly associates the city of Sodom with homosexuality (Genesis 19:4-9), although the Bible associates with Sodom other sins as well. Claims that the primary reason for Sodom's judgment was inhospitality are not supported by sound Bible exegesis.^[72] ^[73]

The Bible states regarding Sodom:

...the LORD rained on Sodom and Gomorrah brimstone and fire from the LORD out of heaven, and He overthrew those cities, and all the valley, and all the inhabitants of the cities, and what grew on the ground. Genesis 19:24-25

Dr. Bryant Wood's Archaeological Investigation in Relation to Sodom

Destruction of Sodom by God

The following was reported in respect to Dr. Bryant Wood's archaeological work in relating to the biblical city of Sodom:

"Most intriguing was evidence that a massive fire had destroyed the city. It lay buried under a coating of ash several feet thick. A cemetery one kilometer outside the city contained charred remains of roofs, posts, and bricks turned red from heat. Dr. Bryant Wood, in describing these charnel houses, stated that a fire began on the roofs of these buildings. Eventually the burning roof collapsed into the interior and spread inside the building. This was the case in every house they excavated. Such a massive fiery destruction would match the biblical account that the city was destroyed by fire that rained down from heaven. Wood states, "The evidence would suggest that this site of Bab edh-Drha is the biblical city of Sodom."^[74]

"

Dr. Wood provides some additional material in relation to the find being the biblical city of Sodom.^[75] ^[76]

Homosexuality and Promiscuity

A 2004 study showed that 55.1 percent of homosexual males in Shoreland – known as Chicago's "gay center" – have at least one sexually transmitted disease.^{[77] [78]}

For related information see: Homosexuality and promiscuity and Homosexuality Statistics

A 2004 article by Michael Foust states:

" A new study by a group of University of Chicago researchers reveals a high level of promiscuity and unhealthy behavior among that city's homosexual male population. According to the researchers, 42.9 percent of homosexual men in Chicago's Shoreland area have had more than 60 sexual partners, while an additional 18.4 percent have had between 31 and 60 partners. All total, 61.3 percent of the area's homosexual men have had more than 30 partners, and 87.8 percent have had more than 15, the research found.

As a result, 55.1 percent of homosexual males in Shoreland – known as Chicago's "gay center" – have at least one sexually transmitted disease, researchers said.

The three-year study on the sexual habits of Chicago's citizens will appear in the upcoming book, "The Sexual Organization of The City" (University of Chicago Press), due out this spring.^{[79] [80]}

"

In September of 2006, the Agape Press reported the following regarding homosexuality and promiscuity:

" A survey by The Advocate, a homosexual magazine, revealed that promiscuity is a reality among homosexuals. The poll found that 20 percent of homosexuals said they had had 51-300 different sex partners in their lifetime, with an additional 8 percent having had more than 300. Unprotected homosexual sex is also a concern among health professionals. A survey in Ireland by the Gay Men's Health Project found that almost half of homosexuals said they were having unprotected sex....

The fact that many homosexuals appear to live their lives in sexual overdrive does not seem to concern leaders in the movement. In an editorial from the same issue (August 15) in which the survey results were published, *The Advocate* said: "[Homosexuals] have been proud leaders in the sexual revolution that started in the 1960s, and we

have rejected attempts by conservatives to demonize that part of who we are.”^[81]

”

In November of 2007 the news organization One News Now reported the following regarding Peter LaBarbera of Americans for Truth remarks about the spread of AIDS via male homosexual promiscuity and a conference on AIDS featuring Pastor Rick Warren and Senator Hillary Clinton:

“ Pro-family activist Peter LaBarbera says he shares Pastor Warren’s desire to fight the spread of HIV/AIDS but wonders what solutions a politician who is an ardent supporter of the homosexual agenda has to offer in combating the disease. ”He says that he’s a co-belligerent with people who he disagrees with on other issues,” notes LaBarbera, “[so] I guess the question would be: does he disagree strongly with Hillary Clinton’s approach to homosexuality and even the AIDS crisis?” Although he admits he is skeptical of what solutions a defender of the homosexual lifestyle like Clinton has to offer churches for fighting the HIV/AIDS crisis, the activist is calling on Warren and Clinton to use the upcoming summit to tackle the problem of homosexual promiscuity, which often results in HIV and other sexually transmitted diseases.

”We have homosexual bath houses operating in major cities across this nation,” LaBarbera notes. ”These are places where men go for anonymous sexual liaisons with other men. They’re bringing the HIV virus back to innocent women, because some of these men do not identify as ‘gay’ and they’re even married. So what about that aspect of the AIDS crisis?”^[82]

”

Another study involving male homosexuality examined the sexual profiles of 2,583 older homosexual men and was published in the *Journal of Sex Research* in 1997.^[83] This study of male homosexuality found that 2.7 percent of these men claimed to have had sex with one partner only. ^[84]

The David P. McWhirter, M.D., and Andrew M. Mattison, M.S.W., Ph.D. study reported in their 1984 work *The Male Couple: How Relationships Develop* stated that in regards to relationships involving male homosexuality that ”all couples with a relationship lasting more than 5 years have incorporated some provision for outside sexual activity in their relationships.”^[85]

Homosexual Male Promiscuity in the United States in the 1970s

Dr. Hewitt wrote the following regarding homosexual male promiscuity in United States in the 1970’s in the *Journal of Sex Research*:

“ Gay liberation in the 1970s was accompanied by an explosion of gay sexuality, especially in tolerant cities such as Los Angeles, New York and San Francisco, where gays concentrated. The director of the New York City Department of Health describes the situation as follows: ”By their own reports, many men had large numbers of sexual partners annually, often numbering in the hundreds and even in the thousands. Frenetic casual and anonymous sex was widespread among homosexual and bisexual men. Bathhouses, back rooms of bars and clubs, and other public settings such as erotic bookstores and movie theaters were, in effect, wide open...these practices and more were accompanied by extremely high rates of sexually transmitted diseases and set the scene for the rapid transmission of HIV once it appeared in the late 1970s. Rates of rectal and oral gonorrhea in males soared...”^[86] ”

Homosexual Couples and Domestic Violence

A recent study by the Canadian government states that "violence was twice as common among homosexual couples compared with heterosexual couples".

For more information please see: Homosexual Couples and Domestic Violence

Studies report that homosexual couples have significantly higher incidences of violent behavior. For example, a recent study by the Canadian government states that "violence was twice as common among homosexual couples compared with heterosexual couples".^[87] According the American College of Pediatricians who cite several studies, "Violence among homosexual partners is two to three times more common than among married heterosexual couples."^[88] In addition, the American College of Pediatricians states the following: "Homosexual partnerships are significantly more prone to dissolution than heterosexual marriages with the average homosexual relationship lasting only two to three years."^[89]

In June of 2004, the journal *Nursing Clinics of North America* reported the following regarding homosexuality and domestic violence:

" Domestic abuse is under-reported in the gay community... Male-on-male same-sex domestic violence also has been reported in couples where one or both persons are HIV-positive. Intimate partner abuse and violence include humiliation, threatening to disclose HIV status, withholding HIV therapy, and harming family members or pets.^[90]

In 2000, the pro-homosexual agenda newspaper the New York Times in an article entitled *Silence Ending About Abuse in Gay Relationships* cites some information which may indicate that domestic abuse may be under-reported in relation to couples who engage in homosexuality.^[91] The New York Times article states the following:

" But the issue of gay domestic abuse has been shrouded by silence until recently... For years, gay people have tried to keep quiet about the problem, said Dave Shannon, coordinator of the violence recovery program at Fenway Community Health, a gay and lesbian clinic in Boston.

Mr. Shannon said: *People feel, 'Why should we air our dirty laundry? People feel so negatively about us already, the last thing we should do is contribute to negative stereotypes of us.'* ^[92]

The Journal of the Family Research Institute using data from the U.S. Justice Department's Bureau of Justice Statistics and the Center for Disease Control concluded that "married men who are not separated are at least 25 times less apt to be domestically attacked than a homosexual male in an 'on-going relationship.' Even if we include all married and separated husbands, the risk of domestic violence in a male-male homosexual relationship is still at least 18 times greater." ^[93] A study published in *The Journal of Family Violence* reported in respect to homosexuality and domestic violence that among its participants "Emotional abuse was reported by 83 %" of its participants.^[94] The U.S. Department of Veterans Affairs Domestic Abuse Fact Sheet states that "11 % of women in homosexual relationships and 23 % of men in homosexual relationships report being raped, physically assaulted, and/or stalked by an intimate partner".^[95]

Commonness of Homosexual Murder

Vernon J. Geberth, M.S., M.P.S. who is a former commander of Bronx homicide for the New York City Police Department stated in 1995 concerning homosexuality and murders that homosexual murders are relatively common and these murders may involve male victims murdered by other males or may involve female victims who are in some type of lesbian relationship and they are murdered by another female.^[96] In 2005, Dr. Harnam Singh, Dr. Luv Sharma, and Dr. Dhatarwal reported in the *Journal of Indian Academy of Forensic Medicine* in respect to homosexuality and murders that homosexual murders are quite common and that these murders may involve both sexes either as victims or as assailants.^[97]

Homosexual Murders and Brutality

Forensic Journal Articles on Homosexual Murders and Overkill

The eminent pathologist Dr. William Eckert wrote concerning homosexual homicides: "Equally high is the number of homicides, many probably related to transient attachments, which often lead to suspicion, jealousy, and murder. When murder does occur it is exceptionally brutal with an overkill appearance... Overkill, as it is seen in homosexual and lesbian murders, is certainly a form of sadistic crime."

There have been a number of forensic journal articles on the issue of homosexual homicides and overkill.^[98] ^[99] ^[100] ^{e[101]} ^[102] In 1996, the forensic journal *The American Journal of Forensic Medicine and Pathology* published an article entitled *Homicide in homosexual victims: a study of 67 cases from the Broward County, Florida, Medical Examiner's office (1982-1992), with special emphasis on "overkill"*. The abstract for the journal article states: "Forensic pathologists often state that homosexual homicides are more violent than those with heterosexual victims. Overkill or wounding far beyond that required to cause death is a frequently used descriptor of these deaths. We quantified the number and extent of injuries between homosexual and heterosexual homicide victims to determine whether one group suffered more violence than the other...Homosexual homicides are more violent than heterosexual homicides when one compares the mean number of injuries (fatal sharp, blunt, and total)/case and the extent of injuries on the body."^[103] "

Dr. William Eckert on Homosexual Homicides and Overkill

According to the New York Times, Dr. William Eckert was a world-renowned authority in the field of pathology and he worked on major murder cases including the assassination of Senator Robert F. Kennedy and the Charles Manson murders.^[104] Dr. Eckert founded the *American Journal of Forensic Medicine and Pathology*.^[105] ^[106] According to *Time* magazine, Dr. Eckert was a pioneer who encouraged collaborative effort between law-enforcement and

forensics teams.^[107]

Dr. Eckert wrote concerning homosexual murders:

" Equally high is the number of homicides, many probably related to transient attachments, which often lead to suspicion, jealousy, and murder. When murder does occur it is exceptionally brutal with an overkill appearance... Overkill, as it is seen in homosexual and lesbian murders, is certainly a form of sadistic crime. In these instances multiple stabbing and other brutal injuries...are common findings...^[108] "

▣ The eminent pathologists Bernard Knight and Pekka Saukko stated that it is a fact that some of the most violent homicides seen by pathologists are among male homosexuals.

Additional Sources on Homosexual Murders and Overkill

Bernard Knight CBE, MD, BCH, MRCP, FRCPath, FHKCPath, DMJ (Path) was a Professor of Forensic Pathology in the University of Wales until he retired in 1996.^[109] In 1993 he was made a Commander of the British Empire (CBE) for his services to forensic medicine.^{[110][111]} Dr. Bernard Knight has been involved in many notorious murder cases, including Fred West and Rosemary West, Roberto Calvi (the Vatican banker), the child killer Mary Bell, and the Truscott case in Canada.^[112] Dr. Pekka Saukko is Professor and Head of the Department of Forensic Medicine at the University of Turku in Finland.^[113] Dr. Saukko is also the editor of *Forensic Science International*.^[114] Doctors Knight and Saukko coauthored a pathology textbook entitled *Knight's Forensic Pathology* in 2004 declared:

" As with heterosexual offenses, the cause of death in fatal cases is almost always some form of general trauma, such as strangulation or head injuries. Homosexual activity, however, may be a parallel event; it is a fact that some of the most violent homicides seen by pathologists are among male homosexuals.^[115] "

The previously cited article in the *Journal of Indian Academy of Forensic Medicine* declares concerning homosexual murders: "These "Lovers' quarrels" between male homosexuals manifest an increased level of violence due to the fact that the parties involved in the emotional conflict are both sexual aggressors."^[116]

The Encyclopedia of Serial Killers by Michael Newton reports:

" Homosexual slayers clearly have no monopoly on violence, but it is true that their crimes often display extremes of "overkill" and mutilation... On balance, it seems fair to say that while homosexuals sometimes fall prey to "gay bashing" violence by bigoted "straights," they are far more likely to be murdered by another homosexual than in a random hate crime.^[117] "

The previously cited pathology textbook by Knight and Saukko stated the following: "In addition, quite a number of fatal altercations arise because a heterosexual man becomes violent when importuned by a homosexual."^[118]

“ Long-time homosexual activist Frank Kameny’s claim to fame is successfully manipulating the American Psychiatric Association into declassifying homosexuality as a mental disorder, and today the Smithsonian honoree is now busily advocating bestiality ”as long as the animal doesn’t mind.” Kameny, 83, has had a long career advocating the removal of any restrictions on human acts long considered by sane societies as obscene, dangerous, and disordered...

Kameny describes his mission as ”Americanism in action” by advocating bestiality and encouraging the saturation of American culture with what he calls ”more and better and harder-core pornography.”

According to Americans for Truth about Homosexuality (AFTAH), Kameny wrote an e-mail to them saying that while he was personally opposed to bestiality, he found it an otherwise ”harmless” quirk, so long as it was consensual with the animal involved.

”Bestiality is not my thing,” Kameny wrote. ”But it seems to be a harmless foible or idiosyncrasy of some people. So, as long as the animal doesn’t mind (and the animal rarely does), I don’t mind, and I don’t see why anyone else should.”^[121]

AIDS

Human Immunodeficiency Virus attacking T4 lymphocytes

A review of the history of homosexuality and AIDS, indicates the original spread of AIDS is generally attributed to the aforementioned promiscuity of homosexual men. Originally the syndrome was called the "gay disease" because the overwhelming majority of patients were homosexual men.^[128]

In September of 2010, Reuters reported: "Nearly one in five gay and bisexual men in 21 major U.S. cities are infected with HIV, and nearly half of them do not know it".^[129] A September 2010 report of the Centers for Disease Control and Prevention (CDC) reported: "Gay, bisexual, and other men who have sex with men (MSM) represent approximately 2 % of the US population, yet are the population most severely affected by HIV and are the only risk group in which new HIV infections have been increasing steadily since the early 1990s. In 2006, MSM accounted for more than half (53 %) of all new HIV infections in the United States..."^[130] In August of 2009, LifeSiteNews reported: "An official with the Centers for Disease Control and Prevention (CDC) announced the CDC's estimate Monday that in the United States AIDS is fifty times more prevalent among men who have sex with men ('MSM') than the rest of the population."^[131] This is a dramatic recent increase. In June of 2004, the journal *Nursing Clinics of North America* reported that homosexual men and men who have sex with men "are nine times more likely to become infected with HIV than their heterosexual counterparts".^[132] Of newly diagnosed HIV infections in the United States during the year 2003, the Centers for Disease Control and Prevention (CDC) estimated that about 63 % were among men who were infected through sexual contact with other men.^[133] As of 1998, fifty-four percent of all AIDS cases in the United States were homosexual men, and the CDC stated that nearly ninety percent of these men acquired HIV through sexual activity with other men.^[134]

In relation to HIV infections in the developed world, in 2007 the German medical journal *Bundesgesundheitsblatt - Gesundheitsforschung - Gesundheitsschutz* published an article entitled *Prevention strategies to control the HIV epidemic. Successes, problems, and perspectives*. The abstract for that German medical journal stated the following: "...for several years now, in the western developed countries sexual risk behaviour, newly diagnosed HIV infections, and the incidence of various other sexually transmitted infections seem to re-increase, especially among men who have sex with men (MSM)."^[135] In 2007, the medical journal *Sexually Transmitted Diseases* reported the following: "In Western Europe, HIV prevalence among community surveys of MSM [men who have sex with men] conducted between 2000 and 2004 ranged from 5 % to 18 %."^[136]

According to the Centers for Disease Control and Prevention (CDC) from 1994 to 1997 the proportion of homosexual men stating they had anal sex increased from 57.6 percent to 61.2 percent.^[137] Although homosexual men may practice various sexual practices which may put them at risk, studies report that anal sex may be an important risk factor for the relay of many diseases.^{[138][139][140][141][142]} For example in 2004, Jeffrey D. Klausner, Robert Kohn, and Charlotte Kent reported in the journal *Clinical Infectious Diseases* the following: "Proctitis, or inflammation of the rectum, is a condition that is not uncommon among men who have sex with men (MSM), and, in HIV-negative men, greatly increases the risk of acquiring HIV infection. With the recent increases in bacterial sexually transmitted diseases (STDs) among MSM in the United States and Europe, there has been a concomitant increase in the number

of cases of clinical proctitis.”^[143] On March 15, 2004 Medscape published an article by John G. Bartlett, M.D. entitled *New Look at "Gay Bowel Syndrome"* in which they commented on the aforementioned 2004 journal article *Etiology of clinical proctitis among men who have sex with men* published by JD Klausner and C. Kent in the journal *Clinical Infectious Diseases*. The article in Medscape stated the following:

“ There were multiple studies of the newly recognized "gay bowel syndrome" in the late 1970s and early 1980s. However, subsequent attention and study has been sparse, in part attributed to reduced frequency thought to reflect changing practices by gay men in response to the HIV epidemic. This study clearly indicates that it is still an issue, since the cases were studied in 2001-2002. Also, the etiology is about the same as previously, although HSV is newly recognized as an important component. This finding not only affects management but also has HIV prevention implications. The authors note that two thirds of the participants were HIV negative and that proctitis increases the risk of HIV by up to 9-fold.”^[144] ”

Johns Hopkins HIV Guide website has a duplicate of the aforementioned article by John G. Bartlett, M.D. at Medscape which was entitled *New Look at "Gay Bowel Syndrome"*.^[145]

In 2004, the prominent medical website, WebMD, stated the following: "Men who have sex with men and women are a "significant bridge for HIV to women," the CDC's new data suggest.”^[146]

Homosexuality and MRSA

In 2008, the *Annals of Internal Medicine* reported that infection with multidrug-resistant USA300 MRSA is common among men who have sex with men, and multidrug-resistant MRSA infection might be sexually transmitted in this population.

In regards to homosexuality and MRSA, on January 15, 2008 the newspaper San Francisco Chronicle had a news article entitled *San Francisco gay community an epicenter for new strain of virulent staph*.^[147] The San Francisco Chronicle news article stated the following in regards to homosexuality and MRSA:

“ A new variety of staph bacteria, highly resistant to antibiotics and possibly transmitted by sexual contact, is spreading among gay men in San Francisco, Boston, New York and Los Angeles, researchers reported Monday.”^[148] ”

On February 19, 2008 the *Annals of Internal Medicine* published a study regarding antibiotic resistant staph infection in relation to men who have sex with men and the abstract for the article states the following in relation to homosexuality and MRSA:

“ Infection with multidrug-resistant USA300 MRSA is common among men who have sex with men, and multidrug-resistant MRSA infection might be sexually transmitted in this population.”^[149] ”

The February 19, 2008 *Annals of Internal Medicine* stated the following regarding homosexuality and MRSA:

“ Data from this study suggest that multidrug-resistant USA300 has spread rapidly among men who have sex with men in San Francisco and Boston, and that having male-male sex seems to be a risk factor for multidrug-resistant USA300 infection independent of HIV infection.... As in the SFGH HIV clinic population, having male-male sex was

a risk factor for multidrug-resistant USA300 infection among patients in the Fenway Community Health sample. All patients in this sample who had multidrug-resistant USA300 infection were men who had sex with men, and none of the more than 3000 men seen at this health center annually who did not have male-male sex had multidrug-resistant USA300 infection, suggesting the exclusive spread of the multidrug-resistant USA300 clone among men who have sex with men....

In summary, we show that multidrug-resistant USA300 has emerged as an important source of disease among men who have sex with men in 2 geographically distinct communities. The high proportion of infection involving the buttocks, genitals, and perineum suggests that community-associated MRSA may be transmitted in the setting of sexual contact among men who have sex with men. The link among USA300, multidrug-resistant USA300, and unsafe sexual risk behaviors should be evaluated further in prospective studies.^[150]

”

The Mayo Clinic states the following regarding antibiotic resistant staph:

“MRSA infection is caused by *Staphylococcus aureus* bacteria — often called “staph.” MRSA stands for methicillin-resistant *Staphylococcus aureus*. It’s a strain of staph that’s resistant to the broad-spectrum antibiotics commonly used to treat it. MRSA can be fatal. Most MRSA infections occur in hospitals or other health care settings, such as nursing homes and dialysis centers. It’s known as health care-associated MRSA, or HA-MRSA. Older adults and people with weakened immune systems are at most risk of HA-MRSA. More recently, another type of MRSA has occurred among otherwise healthy people in the wider community. This form, community-associated MRSA, or CA-MRSA, is responsible for serious skin and soft tissue infections and for a serious form of pneumonia.^[151]

”

In the January 15, 2008 newspaper San Francisco Chronicle entitled *San Francisco gay community an epicenter for new strain of virulent staph*, Binh An Diep, a researcher at San Francisco General Hospital and lead author of the aforementioned medical journal article in the February 2008 *Annals of Internal Medicine* stated the following regarding MRSA:

“We are nowhere near the peak,” Diep said. “The peak will occur when it spreads into the general population.” Diep said there is reason to believe that the more drug-resistant strain will make that leap because it is just a slight variant of USA300, which became one of the most common strains of MRSA in the United States only a few years after it was first detected.^[152]

”

In the previously cited January 15, 2008 newspaper article in the San Francisco Chronicle regarding MRSA the medical researcher Binh An Diep stated regarding the MRSA and the city of San Francisco: “We probably had it here first, and now it is spreading elsewhere.” The January 2008 San Francisco Chronicle article also stated regarding San Francisco and MRSA: “The risk of contracting this difficult-to-treat bug is 13 times greater for gay men than for the rest of the city’s population, researchers found.”^[153]

American conservative commentators and conservative news organizations have published a number of articles on the internet in relation to the homosexuality and MRSA issue.^{[154][155][156][157][158]ize[159][160]}

Homosexuality and Syphilis

A Centers for Disease Control and Prevention analysis suggested that approximately 64 percent of all adult primary and secondary syphilis cases in 2004 were among men who have sex with men.

Syphilis is an infection caused by the bacteria *Treponema pallidum*. An early publication to propose the link between homosexuality contributing to the spread of sexually transmitted disease was the English publication *Proceedings of the Royal Society of Medicine* in 1962.^[161] The *Proceedings of the Royal Society of Medicine* made the following statement: "The importance of homosexual practices in the spread of venereal diseases has attracted particular attention recently. It almost seems that these practices are keeping syphilis alive in this country."^[162]

The news organization Cybercast News Service reported the following about homosexuality and syphilis:

"The federal Centers for Disease Control and Prevention (CDC) says homosexual men accounted for 65 percent of the nearly 12,000 cases of syphilis in the United States in 2007, making them the "primary driver" of increased syphilis rates overall. In a report on sexually transmitted diseases (STDs) issued Tuesday, the government said syphilis, a disease that was almost eliminated as a public health threat less than 10 years ago, is on the rise – with cases increasing each year since 2000."^[163]

"

The CDC also stated the following regarding homosexuality and syphilis:

" "While surveillance data are not available by risk behavior, a separate CDC analysis suggests that approximately 64 percent of all adult P & S syphilis cases in 2004 were among men who have sex with men, up from an estimated 5 percent in 1999....Syphilis increases, especially among men who have sex with men, demonstrate the need to continually adapt our strategies to eliminate syphilis in the United States," said Dr. Ronald O. Valdiserri, acting director of CDC's HIV, STD and TB prevention programs."^[164] "

In 2007, the medical journal *Current Opinion in Infectious Diseases* published an article entitled *The resurgence of syphilis among men who have sex with men*.^[165] The abstract for that article states the following: "A resurgence of syphilis has occurred among men who have sex with men in many developed countries. Infection has been associated with HIV coinfection, multiple partners, and recreational drug use."^[166]

Homosexuality and Gonorrhea

5

Gonorrhea is a sexually transmitted disease (STD) caused by the bacterium *Neisseria gonorrhoeae*.

In relation to homosexuality and gonorrhea, in 2006, the American Association of Family Physicians reported: "Men who have sex with men (MSM) have high rates of gonococcal infection. In San Francisco, more than one half of these infections occur in MSM, and previous cross-sectional studies have reported a prevalence of up to 15.3 percent in this group."^[167]

In 2007, the medical journal *Sexually Transmitted Diseases* published an article entitled *Sexually Transmitted Infections in Western Europe Among HIV-Positive Men Who Have Sex With Men* which stated the following regarding homosexuality and gonorrhea:

" "Since the late 1990s, increases in diagnoses and rates of gonorrhea have been observed across the region, although recently there has been evidence of a levelling off and even a decline in some countries. In Denmark (1994–1999), gonorrhea incidence was 6 times higher among known HIV-positive MSM [men who have sex with men]... A study in a Parisian clinic showed that at least one-third (30/92) of MSM diagnosed with gonorrhea between January 1999

and May 2001 were HIV-positive... In Sweden, 5.4 % (4/74) of gonorrhea cases were in HIV-positive MSM in 2000. By comparison, at sentinel sites in England and Wales, 32 % (123/381) of MSM with gonorrhea were HIV-positive in 2004.^[168]

”

Homosexuality and Lymphogranuloma Venereum Outbreaks

Lymphogranuloma venereum is a sexually transmitted disease that mainly infects the lymphatics.^[169] According to the recent medical literature, there have been recent outbreaks of lymphogranuloma venereum in Europe and North America and the outbreaks have been limited to the homosexual community.

Homosexuality and Parasites

50

Throughout the world, high rates of intestinal parasitism are found in men who have sex with men.

Concerning the issue of homosexuality and parasites, anal sex can be an important risk factor for intestinal parasitism.^[170] In 2006, the *The Medical Journal of Australia* reported the following:

“ High rates of intestinal parasitism are found in MSM [men who have sex with men] throughout the world. Amoebiasis has become endemic in MSM in Japan and causes significant morbidity and mortality; complications such as colitis and liver abscesses occur more frequently in homosexual and bisexual men than in heterosexual men. Similar findings on amoebiasis are reported from Taiwan, with MSM at increased risk for invasive amoebiasis and intestinal colonisation with *E. histolytica*.^[171]

”

In 2001, The journal *Internal Medicine* (Tokyo, Japan) published an article entitled *Amebiasis in acquired immunodeficiency syndrome* in which they stated the following the following:

“ While the overall prevalence of amebiasis is approximately 4 % in the United States, certain high-risk groups have a much higher incidence of infection and disease. Prevalence of *E. histolytica* or *E. dispar* in the gay population of New York City and San Francisco approached 40-50 % . Some Japanese literature also showed homosexual contact was an important risk factor for amebic infection.^[172]e^[173] ”

In 1990 SD Wexner wrote in a article published in *Diseases of the Colon and Rectum* that mentioned the subject of homosexuality and parasites and the abstract for that article states: “....a host of parasites, bacterial, viral, and protozoan are all rampant in the homosexual population.”^[174]

In 1985, the peer reviewed medical journal *Gut*, which is an international medical journal for gastroenterology and hepatology, had an article entitled *The Gay Bowel* authored by I V Weller which stated the following: “*Giardia lamblia* and *Entamoeba histolytica* have long been regarded as ‘exotic’ organisms, but are ‘hyperendemic’ among gay men attending STD clinics with up to 20 excreting cysts.”^[175]

A 1980 article in the *Canadian Medical Association Journal* stated the following in its abstract: "In a controlled study 67.5 % of 200 homosexual men but only sixteen percent of 100 heterosexual men were found to be infected with intestinal parasites"...These findings suggest that the male homosexual community may be an important reservoir of potentially pathogenic protozoa."^[176]

Higher Rates of Syphilis, Gonorrhea, Lymphogranuloma Venereum, and Amebiases Elaborated

Sexually transmitted diseases that cause proctitis include syphilis, gonorrhea, lymphogranuloma venereum, and amebiasis and as noted earlier the homosexual community has significant problems in regards to these illnesses.^[177]^[178]^[179] In addition, as mentioned earlier proctitis significant risk factor in respect to HIV infection.^[180]^e^[181] According to the Mayo Clinic, "proctitis in general mainly affects adult males".^[182] Proctitis, syphilis, gonorrhea, lymphogranuloma venereum, and amebiasis are all maladies that are associated with gay bowel syndrome which why John G. Bartlett, M.D. stated at the Johns Hopkins HIV Guide website and at Medscape that gay bowel syndrome is still currently an issue.^[183]^[184]

Homosexuality and Hepatitis

Hepatitis C Virus

For more information please see: Homosexuality and Hepatitis

In relation to homosexuality and hepatitis, according to the Centers for Disease Control and Prevention (CDC) both Hepatitis A and Hepatitis B disproportionately affects men who have sex with men (MSM).^[185]^e^[186]

In a 2007 article entitled *Advances in the Management of Viral Hepatitis B and Hepatitis C Infection in HIV-Coinfected Patients* Vincent V. Soriano, MD, PhD reported in Medscape the following regarding homosexuality and Hepatitis C viral infections:

"Hepatitis C virus (HCV) has not been thought to be efficiently transmitted through sexual contact. However, recent reports of outbreaks of acute hepatitis C among men who have sex with men (MSM) have changed this view. British researchers examined 7223 MSM who attended a single clinic in Brighton, United Kingdom, since 2000. The study investigators reported that highly risky sexual practices along with multiple sex partners explained the increase in episodes of acute HCV infection in this population."^[187]

Viral hepatitis is one of the illnesses of gay bowel syndrome.

Homosexuality and Shigellosis

Shigella bacteria cause shigellosis

Men who have sex with men (MSM) appear to have a greater incidences of the malady shigellosis. Shigellosis is a condition associated with gay bowel syndrome.

Peter LaBarbera and His Calls to Shut Down Homosexual Bathhouses

For more information please see: Gay bathhouses

Peter LaBarbera, president of Americans for Truth, stated the following about gay bathhouses:

" Why isn't there a concerted government effort — akin to the current anti-smoking campaigns — to reign in homosexual promiscuity — beginning with closing down all sex businesses (bathhouses) that facilitate homosexual perversion? (Of course, we favor closing down straight prostitution businesses as well.) We know that bisexual behavior (men on the "down low") help spread dangerous diseases to the general population: how many deaths and illnesses have to result from "second-hand sodomy" before authorities take corrective action?^[188] "

As mentioned earlier, in 2004, the prominent medical website, WebMD, stated the following: "Men who have sex with men and women are a "significant bridge for HIV to women," the CDC's new data suggest."^[189]

In relation to the closing of a San Diego homosexual bathhouse Peter LaBarbera stated the following:

" There are hundreds of homosexual bathhouses across the United States. Men who frequent bathhouses contract deadly diseases which tragically cut short their own lives, the lives of their male sex partners, and the lives of girlfriends and wives. We hope this victory in San Diego will inspire many more citizens to complain and prompt prosecutors to enforce our laws.^[190] "

In 2004, Christian activist James Hartline, on an international broadcast of the 700 Club, took reporters on a tour right up to the front doors of the former San Diego homosexual bathhouse, in the hopes that more citizens would be involved in shutting its front doors (the 700 Club video is available on the CBN.com website)^[191]^[192] Christian activist James Hartline and fellow Christians opposed the homosexual bathhouse in San Diego for four years before it shut down.^[193]

Cleveland Health Official and the Opening of a Homosexual bathhouse

The Beacon Journal of Akron reported the following on July 16, 2006 regarding the opening of a homosexual bathhouse:

" City leaders say the club could help spark the economic revival of a desolate commercial block, but they also worry that the bathhouse could fuel a growth of HIV/AIDS and other diseases. "I think it's going to be a big mess in the not-too-distant future," said William Tiedemann, AIDS director for the Cleveland Department of Public Health.^[194] "

Mayor Naugle and His Concerns Regarding Homosexual Bathhouses

In 2007, Peter LaBarbera reported on Fort Lauderdale Mayor Naugle expressing public health concerns about homosexual bathhouses and he asked Florida tourism officials to stop promoting homosexual bathhouses. ^[195]

Homosexuality and Mental Health

Studies have long indicated that homosexuals have a substantially greater risk of suffering from psychiatric problems (suicide, depression, bulimia, antisocial personality disorder, and substance abuse).^[196]

In respect to homosexuality and mental health, studies have long indicated that homosexuals have a substantially greater risk of suffering from psychiatric problems (suicide, depression, bulimia, antisocial personality disorder, and substance abuse).^[197]

For example, a national survey of female homosexuals was published in the *Journal of Consulting and Clinical Psychology* which found that 75 percent of the approximate 2,000 respondents had pursued psychological counseling of some type, many for treatment of long-term depression or sadness.^[198]

In contrast to claims by gay rights activists blaming this heightened incidence of mental issues on discrimination, John R. Diggs, M.D. states the following regarding homosexuality and mental health:

“An extensive study in the Netherlands undermines the assumption that homophobia is the cause of increased psychiatric illness among gays and lesbians. The Dutch have been considerably more accepting of same-sex relationships than other Western countries — in fact, same-sex couples now have the legal right to marry in the Netherlands. So a high rate of psychiatric disease associated with homosexual behavior in the Netherlands means that the psychiatric disease cannot so easily be attributed to social rejection and homophobia.^[199]”

In addition, the late Harold I. Lief, who was a leading sex therapist who was an early defender of having medical schools put greater emphasis on sex education in training doctors, conducted a 1977 survey of members of the American Psychiatric Association and 73 % of the psychiatrists responding said that they thought that homosexual men are less happy than others. ^{[200][201]} Also, seventy percent of the psychiatrists surveyed stated they believed that the homosexuals' problems were due more to personal conflicts than to social stigmatization.^[202] In relation to personal conflict, as stated earlier studies report that homosexual couples have significantly higher incidences of violent behavior. As noted earlier, these studies are not surprising given what pathologists have stated regarding the commonness and brutality of homosexual murders.

The late Charles Socarides wrote regarding homosexuality:

“For most of this century, most of us in the helping professions considered this behavior aberrant. Not only was it “off the track”; the people caught up in it were suffering, which is why we called it a pathology. We had patients, early in their therapy, who would seek out one sex partner after another-total strangers-on a single night, then come limping into our offices the next day to tell us how they were hurting themselves. Since we were in the business of helping people learn how not to keep hurting themselves, many of us thought we were quietly doing God's work.^[203]”

Richard Fitzgibbons stated the following regarding homosexuality:

“The failure to understand the actual causes of homosexuality impacts those who counsel teenagers and adults with this disorder. Therapists regularly tell those seeking help that the Church's teaching on homosexuality is insensitive to homosexuals, unscientific, and erroneous. They are advised to accept themselves as being created homosexual by

God. [204] ”

It Gets Better Project

See also: Atheism and suicide

The It Gets Better project is a misguided liberal project to prevent young homosexuals from committing suicide and it does not encourage young people to become ex-homosexuals. In January of 2012, Vox Day reported that two homosexual males who promoted the It Gets Better project committed suicide. (see also: Mental Health and Homosexuality).[205]

Homosexuality and Cigarette Smoking

The recent medical literature states the homosexual men and lesbians in the United States have significantly higher rates of cigarette smoking than heterosexuals.

In relation to homosexuality and smoking, the recent medical literature states the homosexual men and lesbians in the United States have significantly higher rates of cigarette smoking than heterosexuals.[206]size[207]

Homosexuality and Anal Cancer

In June of 2004, the journal *Nursing Clinics of North America* reported the following regarding homosexuality and anal cancer:

“ One of the more pressing issues for gay men is anal carcinoma. Several recent studies have indicated the rate of anal dysplasia to be increasing in men with and without HIV. Ninety percent of men with HIV have the human papilloma virus (HPV), while 65 % of men without HIV have HPV. HVP type 16 is the most troublesome for developing cancer and is found in a significant portion of gay men.[208] ”

In 1997, Concerned Women of America reported the following regarding homosexuality and anal cancer:

“ Homosexual men’s practice of anal sex has left many of them victims of anal cancer. One article in the *New England Journal of Medicine* commented, “Our study lends strong support to the hypothesis that homosexual behavior in men increases the risk of anal cancer: 21 of the 57 men with anal cancer (37 percent) reported that they were homosexual or bisexual, in contrast to only one of 64 controls.” The Journal of the American Medical Association also published similar findings: “Epidemiological studies have shown that risk factors for anal cancer include homosexuality, history of receptive anal intercourse, presence of anal condylomata, and smoking.” And the *International Journal of Cancer* stated, “Being single and having practised anal intercourse appears to be associated with anal cancer and case reports have suggested a recent increase in the number of cases of anal cancer.” Other studies have yielded the same conclusions.[209] ”

Peter LaBarbera wrote:

"The National Youth Risk Behavior Surveys are given to high schoolers, and the Centers for Disease Control looked at the data from 2001 to 2009 in the states of Connecticut, Delaware, Maine, Massachusetts, Rhode Island, Vermont, Wisconsin and the cities of Boston, Chicago, Milwaukee, New York City, San Francisco and San Diego, locales where the schools permitted questions about homosexual identity/behavior, which isn't always the case in less "progressive" areas. Teens who called themselves "gay, lesbian or bisexual," or who were unsure, as well as those who didn't use those labels but had sexual contact only with same-sex people or with both sexes, were found to be more likely than heterosexually identified students to engage in seven out of the 10 risk behavior categories. These were: 1) behaviors that contribute to violence; 2) behaviors related to attempted suicide; 3) tobacco use; 4) alcohol use; 5) other drug use; 6) sexual behaviors; and **7) weight management.** (emphasis added)^[210]"

Peter LaBarbera also wrote: "Anyone who has researched the subject of homosexuality knows that many of the most staunch advocates of homosexuality are those who hold a decidedly secular outlook." (For more information please see: Atheism and obesity).^[211]

American Lesbian Women More Than Twice as Likely to Be Obese Than All other Female Sexual Orientation Groups

In April of 2007, the *American Journal of Public Health* analyzed data from 2002 National Survey of Family Growth and the data suggested that American lesbian women were 2.69 times more likely to be overweight and 2.47 times more likely to be obese than all other female sexual orientation groups. [213] The abstract for this study indicated that "lesbians are at greater risk for morbidity and mortality linked to overweight and obesity." [214]

In 2009, the *PubMed* article abstract for the Polish psychiatry journal *Psychiatria Polska* article *Body Image in Homosexual Persons* declared:

" Homosexual women are less concentrated on physical appearance and more satisfied with their bodies while being more tolerant to obesity.... For lesbian women the ideal body image is more massive than for heterosexual women.[215] "

In 2007, a purported lesbian wrote to Andrew Sullivan, the political commentator and administrator of *The Daily Dish* blog:

" And - oh heck, I'll admit it - aesthetics have value, too! As a woman, I may not be as focused on looks as men are predisposed to be, but I sure am tired of seeing so many queer ladies out there who are way past 200 pounds. Way, way past. Sorry, but no amount of "fat acceptance" is going to make that a pleasant sight - gay, straight, butch, femme, male or female.[216] "

Bible Prohibition Against Homosexuality and Sound Health Practices

Given the many diseases associated with homosexuality, the biblical prohibition against homosexuality is arguably one of the many examples where the Bible exhibited knowledge that was ahead of its time.

In January of 2007, the journal *AIDS (London, England)* in an article entitled *Use of illicit drugs among gay men living with HIV in Sydney* stated the following: "Higher rates of illicit drug use have been reported among gay men than among similar populations of heterosexual men..."[218]

In June of 2004, the journal *Nursing Clinics of North America* reported the following regarding homosexuality and illegal drug use:

“...the increased use of recreational or party drugs such as ecstasy, “poppers”, and methamphetamine (“crystal meth”) influence unsafe sexual behaviors in gay men. Many of these illicit drugs are used during “circuit parties,” in which gay men from various geographical locales congregate in one large metropolitan community over an extended 2- or 3-day period for the purposes of intense partying and sexual activity.^[219]”

Homosexuality and the Suppression of Religious Liberty

▫ The book *When the Wicked Seize a City* recounts how Pastor Chuck McIlhenny and his church were terrorized by homosexual activists.

There have been a notable number of incidents involving the issue of homosexuality and the suppression of religious liberty in regards to dissent and the objectionableness of homosexuality.

- Dr. Chuck McIlhenny served as pastor of San Francisco's First Orthodox Presbyterian Church for numerous years.^[220] In 1978 Dr. McIlhenny co-authored a book which recounted how he was threatened and his church and home firebombed by homosexual activists subsequent to a lawsuit he won regarding the church's right to fire its organist who was homosexual.^[221] Dr. McIlhenny's home was firebombed while his family was sleeping inside.^[222]
- The documentary film *A Nation Adrift* chronicles some of the events that took place during the Hamilton Square Baptist Church riot in San Francisco in which a angry group of male homosexuals and lesbians vandalized church property, assaulted church members, terrorized church congregates, screamed profanity, threw rocks, harassed and scared children, and disrupted a church service.^[223] ^[224] ^[225] ^[226] See also: [\[\[Homosexual Public Indecency Tolerated in San Francisco\]](#)
- In 2005, David Parker was arrested and put in handcuffs at his child's school in relation to a lesson promoting homosexuality called the "King & King" being taught to first graders in the Massachusetts school.^[227] ^[228] David Parker desired parental rights but the principal at Esterbrook Elementary School in Lexington defended the "King & King" lesson and denied parents the right to be informed about it and to opt their kids out.^[229] The "King and King" violated David Parker and his wife's religious beliefs regarding homosexuality.^[230] The Massachusetts anti-homosexual agenda organization MassResistance has a webpage devoted to the events surrounding the David Parker issue and the ongoing legal battle associated with the matter.^[231]

- In 2004, eleven Christians, who have been dubbed the "Philly 11", were arrested at a Philadelphia event promoting homosexual-rights and some of the charges were felonies.^{[232][233]} Among those who were arrested were Arlene Elshinnawy, a 75-year-old grandmother of three, and Linda Beckman, a 70-year-old grandmother of 10 who were arrested for sharing their faith on the public sidewalk.^[234] In 2005, after national publicity led to widespread criticism of the arrests (especially the heavy penalties being threatened) a judge dismissed all criminal charges.^[235] In 2006, a United States federal judge ruled the group of homosexuals could not dismiss a lawsuit against the homosexual activist group Philly Pride Presents which was brought against them by the Christian protestors.^[236]

Hamilton Square Baptist Church

- In October of 2001, a 69 year old street preacher named Harry Hammond from Bournemouth, England was subjected to assault by an angry crowd of 40 people while he proclaimed his Christian views in the town center which included a call to repentance in respect to homosexuality.^[237] Mr. Hammond was arrested, prosecuted and fined but no arrests were made in respect to those who assaulted him.^[238] Appeals to overturn the verdict, which included an appeal to the European Court of Human Rights, were dismissed. ^[239]
- WorldNetDaily reported the following regarding the famous St. Patrick's Cathedral Incident involving homosexual and abortion activists:

" One infamous incident was the assault on New York's famed St. Patrick's Cathedral on December 10, 1989. While Cardinal John O'Connor presided over the 10:15 Sunday morning Mass, a multitude of "pro-choice" and "gay rights" activists protested angrily outside. Some, wearing gold-colored robes similar to clerical vestments, hoisted a large portrait of a pornographically altered frontal nude portrait of Jesus.^[240] "

- Time Magazine reported the following incident regarding the Roman Catholic Church and homosexual activists: "In San Francisco gay activists smeared handprints in paint and hung posters depicting sex acts in the Cathedral of St. Mary of the Assumption and the archdiocese chancery."^[241]
- In Canada and France legislators have been fined for publicly criticizing homosexuality.^[242]
- In Canada a printer was fined several years ago for refusing to print a homosexuality related contract that he said violated his traditional Christian beliefs.^[243]

- According to WorldNetDaily: "A website featuring comments by, for and about "principled conservatism" is being investigated by the Canadian government, and could be fined or ordered shut down for some postings about Islam and homosexualityThe Human Rights Commission is appointed to investigate complaints that "hate speech" or other illegal activity has been detected, and issue rulings or recommendations to the national Human Rights Tribunal, which has yet to find any defendant innocent in such a case."^[244]

The First Baptist Church in Gravois Mills was vandalized and threatened by homosexual activists and received obscene phone calls. An FBI agent refused to list the incident as a hate crime.

- A Swedish hate crimes law was used to jail for 30 days Pastor Ake Green who preached that homosexuality is a sin.^[245]
- In March of 2000 in New York City, a pastor was compelled to remove a billboard display from a city street because it violated the city's homosexuality related anti-discrimination law. The billboard simply quoted Leviticus 18:22: "Thou shall not lie with mankind as with womankind. It is abomination."^[246]
- The First Baptist Church in Gravois Mills was vandalized and threatened by homosexual activists and received obscene phone calls. An FBI agent refused to list the incident as a hate crime. The incident involved an anti-homosexuality Bible verse on the churches' sign.^[247]
- A British couple were told they were denied the chance to adopt because it was determined that their Christian religious faith might 'prejudice' them against a homosexual child put in their custody.^[248]
- According to WorldNetDaily: "Already in the United States, Catholic Charities of Boston halted all adoption operations in the state after being told under Massachusetts' pro-'gay' nondiscrimination law, only agencies that placed children in homosexual-led households would get licensed by the state."^[249]
- Five Christians in St. Petersburg, Florida which included two pastors were arrested at a homosexual rally for merely stepping onto the public sidewalk instead staying caged in their officially designated "free speech zone."^[250]
- In Elmira, New York police arrested seven Christians for praying in a public park where a homosexual festival was getting started.^[251]
- The It Gets Better Project is currently a national embarrassment. In 2012, homosexual activist Dan Savage was supposed to deliver an anti-bullying message to high school students. However, as many as 100 students walked out on his speech as he shouted vulgarities about the Bible and mocked Christians. ^[252] It was reported that Savage engaged in verbal bullying as well. ^[252]

Roman Catholic Church, Homosexuality, and the Sexual Molestation of Minors

See also: Homosexuality and pederasty

Throughout the 1970s and 1980s, the American Roman Catholic bishops and the Vatican had noted a growing problem with clerical sexual abuse in the U.S.^[253] In addition, Ireland and other European countries have experienced problems relating to instances of Roman Catholic priests sexually abusing children.^[254]

Catholic League president Bill Donohue declared concerning the scandals of priests molesting minors:

"The latest attempt to silence me comes from GLAAD (Gay & Lesbian Alliance Against Defamation), Call to Action and the Interfaith Alliance. The three left-wing organizations have joined hands demanding that the media "ignore Bill Donohue." Their complaint? My telling the truth about the role homosexual priests have played in the abuse scandal. The data collected by John Jay College of Criminal Justice show that between 1950 and 2002, 81 percent of the victims were male and 75 percent of them were post-pubescent. In other words, three out of every four victims have been abused by homosexuals. By the way, puberty, according to the American Academy of Pediatrics, begins at age 10 for boys.

No problem can be remedied without an accurate diagnosis. And any accurate diagnosis that does not finger the role that homosexuals have played in molesting minors is intellectually dishonest. The cover-up must end. And so must attempts to muzzle my voice. Everything I am saying is what most people already know, but are afraid to say it. It's time for some straight talk.^[255]

"

Bill Donahue published in the New York Times:

"The Times continues to editorialize about the "pedophilia crisis", when all along it's been a homosexual crisis. Eighty percent of the victims of priestly sexual abuse are male and most of them are post-pubescent. While homosexuality does not cause predatory behavior, and most gay priests are not molesters, most of the molesters have been gay.^[256]"

HIV Infected Adolescents and Young Adults in America and Infection by Older Men

In 2006, the noted pediatric journal entitled *Journal of Adolescent Health* published a position paper entitled *HIV infection and AIDS in adolescents: An update of the position of the Society for Adolescent Medicine*.^[257] The aforementioned 2006 position paper of the *Journal of Adolescent Health* stated the following: "Among adolescents and young adults with HIV or AIDS, most infections are acquired by having sex with HIV-infected men."^[258] In addition, the *Journal of Adolescent Health* stated the following:

"As of December 31, 2003, almost 38,500 cases of AIDS had been reported in adolescents and young adults 13–24 years old in the United States of America. Previous studies demonstrating that the risk of AIDS increased with the age at infection suggest that a large proportion of people developing AIDS in their third decade of life became infected

with HIV as teens.^[259] ”

Homosexuality and Older Homosexuals Preying on Vulnerable Youth

See also: Homosexuality and pederasty

The pro-homosexuality publication *The Advocate* in 1992 made the following admission in regards to homosexuality and HIV infection in American youth:

“ Gay boys and straight girls who are having sex for money, shelter, love - they are at risk. And our community, the gay and lesbian community - and I particularly fault gay men here - has done nothing to try to help our youth. Gay men view these boys as recreational toys to be used. I have heard many stories of HIV-positive men having unprotected sex with boys. They don't think it matters.^[260] ”

In 1991, the medical researcher Kruks reported the following in the *Journal of Adolescent Health* regarding homosexuality and HIV infection among youth:

“ Gay male street youth, as well as nonlesbian female street youths, seem to be particularly vulnerable for emotional as well as sexual exploitation... These relationships are often extremely damaging for a number of reasons. The "sugar daddy" usually presents himself to the youth in a loving caretaker role. For a street youth who has a past history of rejection and/or abuse, the promise of being loved and cared for is a compelling one. However, these relationships in many ways have similar dynamics to incest.

Many gay youths coming to YSD [Youth Services Dept. of Los Angeles Gay and Lesbian Community Service Center] for services have long histories of being involved in a succession of "sugar daddy" relationships. Each of these is a cycle of falling in love, believing that life will now be wonderful forever and that this older adult truly loves the young person, discovering that in fact it is just sex that the adult wants, feeling the impact of one more betrayal, and ending up on the streets again. The whole cycle last an average of 1-2 months, and the youth often becomes extremely suicidal at the end of each cycle.^{[261][262]}

”

In 1995, the medical journal *Archives of Pediatrics and Adolescent Medicine* stated the following:

“ Another group at high risk for HIV infection is young men reporting sex with other men....Many young gay men tested in homeless youth centers reported exchanging money or drugs for sex, which may place them at high risk for HIV infection. Young men who are homeless or runaways who barter for sex with same-sex partners may not consider themselves gay and thus may be beyond the reach of prevention messages targeting the gay community.^[263] ”

Homosexuality and Pedophilia - Journal of Homosexuality, International Lesbian and Gay Federation (ILGA) and NAMBLA

see also: Homosexuality and pederasty

There are notable instances of prominent homosexual organizations being permissive towards pedophilia or condoning/promoting pedophilia. For example, the *Journal of Homosexuality* is a academic journal which has featured material that looks upon pedophilia in a generally approvingly manner.^{[264] [265]} For example, an article by Dr. Brongersma stated that parents should not view a pedophile "as a rival or competitor, not as a thief of their property, but as a partner in the boy's upbringing, someone to be welcomed into their home..."^[266]

The International Lesbian and Gay Association was founded in 1978 and is a world-wide network of national and local homosexual groups has more than 620 member organizations.^[267] In 1993 the ILGA obtained consultative status on the UN Economic and Social Council (ECOSOC) but in 1994 they lost their status due to groups within their membership, most notably the North American Man/Boy Love Association (NAMBLA) and Vereniging MARTIJN, advocating pedophilia or expressing solidarity with pro-pedophilia groups.^[268] ILGA expelled the groups associated with pedophilia but they were denied ECOSOC decided against restoring ILGA's consultative status in 2002 and once

again in January 2006.^[269] NAMBLA had been a member of the ILGA for a decade before it was expelled by the ILGA. NAMBLA calls itself a homosexual organization.

Many consider Harry Hay to be the founder of the American homosexual movement.

Homosexuality and Pedophilia - Other Ties of NAMBLA to the Homosexual Community

Steve Baldwin published the following in the Regent University Law Review regarding homosexuality and pedophilia: "Indeed, some NAMBLA chapters meet at mainstream gay centers such as Philadelphia's Gay and Lesbian Community Center. NAMBLA's meetings and conferences always feature mainstream gay leaders and speakers. For example, Don Kilhefner, of the Los Angeles Gay Community Service Center, gave a speech to Los Angeles NAMBLA members on the subject of "The Significance of Man/Boy Love in the Gay Community. The most comprehensive gay networking website, the Queer Resource Directorylinks every gay group in the country including NAMBLA and other homosexual groups that focus on youth. NAMBLA marches in gay pride parades with the consent of the gay leadership. Many of the homosexual movement's most prominent leaders endorse NAMBLA and its goals. Gay authors and leaders such as Allen Ginsberg, Gayle Rubin, Larry Kramer (founder of ACT-UP), Pat Califia, Jane Rule, Michael Kearns, and Michel Foucault have all written in favor of either NAMBLA or man-boy relationships. Harry Hay, whom many consider the founder of the American homosexual movement, invited NAMBLA members to march with him in the 1993 "March on Washington" gay rights parade. He also marched in the 1986 Los Angeles gay parade wearing a shirt emblazoned with the words "NAMBLA walks with me."

Leading mainstream homosexual newspapers and magazines such as the Advocate, Edge, Metroline, The Guide, and The San Francisco Sentinel have not only published pro-NAMBLA articles and columns but also many have editorialized in favor of NAMBLA and sex with children.^[270]

1. The atheist and homosexual David Thorstad was a founding member of the North American Man-Boy Love Association (NAMBLA).^[271]
2. **Harry Hay** (1912 - 2002) was an liberal advocate of statutory rape and the widely acknowledged founder and progenitor of the activist homosexual agenda in the United States. Hay joined the Communist Party of the United States (CPUSA) in 1934. ^[272] Harry Hay was an atheist.^[273] He was a vociferous advocate of man/boy love. ^{[274][275]} In 1986, Hay marched in a gay parade wearing a shirt emblazoned with the words "NAMBLA walks with me."^[276]

Homosexual Parenting and the American College of Pediatricians

In 2004, the American College of Pediatricians stated the following regarding homosexuality and parenting:

“ Children reared in homosexual households are more likely to experience sexual confusion, practice homosexual behavior, and engage in sexual experimentation. Adolescents and young adults who adopt the homosexual lifestyle, like their adult counterparts, are at increased risk of mental health problems, including major depression, anxiety disorder, conduct disorder, substance dependence, and especially suicidal ideation and suicide attempts... The research literature on childrearing by homosexual parents is limited. The environment in which children are reared is absolutely critical to their development. Given the current body of research, the American College of Pediatricians believes it is inappropriate, potentially hazardous to children, and dangerously irresponsible to change the age-old prohibition on homosexual parenting, whether by adoption, foster care, or by reproductive manipulation. This position is rooted in the best available science.^[277]”

Homosexuality in the Media

Reverend Louis Sheldon is a founder of the Traditional Values Coalition

The Traditional Values Coalition states the following regarding the reporting of homosexuality and the United States media:

“ The National Lesbian and Gay Journalists Association has hundreds of members and is heavily funded by Hearst

newspapers, Knight-Ridder, CBS News, CNN, Gannett, NBC, Los Angeles Times, Fox News, and more. Major newspapers throughout the U.S. have homosexual activists on their staffs who filter what you read about homosexuality.^[278]

Accuracy in Media declared concerning the Fox News Channel:

“Media organizations which underwrote the convention included NBC News, Times Inc., Turner Broadcasting, Knight-Ridder, the Washington Post and Fox News Network. That’s right - Fox News. This is supposed to be a conservative network. ABC, NBC, CBS, the New York Times, and USA Today all sent recruiters to the event, to hire open gays as journalists. Fitzpatrick comments, “By treating the National Lesbian and Gay Journalists Association as a legitimate counterpart to black and Hispanic journalists’ associations, these media organizations showed that they agree with the notion that homosexuals, a group defined by behavior rather than immutable characteristics, constitute a bona fide minority.”^[279]”

Currently, the Fox Broadcasting Company website declares concerning the National Lesbian and Gay Journalists Association (NLGJA):

“NLGJA Annual Conference and Job Fair Fox News is a regular exhibitor at these annual Job Fairs. News Corp sponsored the opening reception for first time attendees in 2006, as well as sponsoring workshops on Journalism in various colleges in 2007.”^[280]

In 2010, the National Lesbian and Gay Journalists Association declared that Kelly Wright, a Fox News Channel representative, attended NLGJA’s 15th Annual New York Benefit.^[281] According the Fox News Channel website: “Kelly Wright is co-anchor of “FOX & Friends Weekend” as well as a general assignment correspondent for FOX News Channel (FNC).”^[282] Kelly Wright is a graduate of the Christian university Oral Roberts University.^[283] In January of 2010, the pro-life website published by Jill Stanek claimed Mr. Wright is a pastor.^[284] According to Christianity and the Bible, homosexuality is a sin.

Joseph Farah

Joseph Farah, who founded WorldNetDaily, wrote an article on the National Lesbian and Gay Journalists Association (NLGJA) in which he stated that he had covered the group for some time.^[285] However, it wasn’t until their 10th anniversary that the shed the guise of portraying themselves as an objective professional organization that promotes higher journalistic standards in regards to the issue of homosexuality and showed themselves as promoters of a homosexual activist agenda that attempts to gain special rights.^[286]

In September of 2000, Mr. Farah stated the following regarding the National Lesbian and Gay Journalists Association: “It is...a group that has bent so far toward changing the newsroom culture that the big debate in San Francisco was whether journalists should even bother getting other points of view on homosexuals’ issues and stories. Did you catch that? What was on the table at the NLGJA conference was the question of whether those with differing

viewpoints on homosexuality and the special "rights" activists are asserting for them based on their behavior should even have a say in news stories.

CBS correspondent and NLJGA member Jeffrey Kofman made his thinking clear: "The argument (is): Why do we constantly see in coverage of gay and lesbian, bisexual and transgender issues the homophobes and the fag-haters quoted in stories when, of course, we don't do that with Jews, blacks, et cetera?"

Paula Madison, vice president of diversity at NBC and news director for the NBC's New York City affiliate WNBC, added: "I agree with him. I don't see why we would seek out ... the absurd, inane point of view just to get another point of view."

Kofman rejoined: "All of us have seen and continue to see a lot of coverage that includes perspectives on gay issues that include people who just simply are intolerant and perhaps not qualified as well."

This was political correctness gone wild. ^[287]

John Stossel is an author, consumer reporter, and a co-anchor for the ABC News show 20/20. Cybercast News Service states the following regarding the influence of the New York Times and Washington Post:

"While the newspapers reach only a fraction of people compared to the television networks, he said radio and television producers rely heavily on their contents. "The reason the Times, and to a lesser extent the Post, are so important, and they are, is because the TV and radio - all of the media - copy it sycophantically," he [John Stossel] said. "That's how bias at the Times becomes bias in other media."^[288]

In April of 2009, Peter LaBarbera of Americans for Truth wrote:

"How fascinating that Wayne Besen (left) is given the opportunity to appear on FOX News, of all places..., to critique alleged "homophobic" attitudes and speech toward homosexuals — when he has such a well-deserved reputation for being one of the nastiest "queer" activists in the business."^[289] "

☞ Peter LaBarbera

In March of 2009, Peter LaBarbera declared:

"Temple U. Professor Dr. Marc Lamont Hill (left), a frequent guest on FOX News, believes Americans are "homophobic" because most still don't like to see homosexuality (compared to heterosexuality) on TV or the big screen. We say Prof. Hill should get off his liberal high horse and stop lecturing Americans for their normal reaction to unnatural and immoral behavior.... Enough already. Gay sex is wrong, unhealthy (especially between men), and my hunch is it's still pretty off-putting to most FOX viewers who are honest with themselves. And that's OK. But I'll go further: if there is a growing acceptance of homo-sexual behavior, especially among young people, that's not a good thing but a sign of America's descent into decadence, and our departure from a transcendent Judeo-Christian moral code that

has served this nation well.^[290]

”

In 2006, Peter LaBarbera wrote:

“ Fox News and Wal-mart are among the high-level (\$10,000) sponsors of the National Lesbian and Gay Journalists Association’s (NLGJA) 2006 Convention in Miami (Sept 7-10 at Loew’s Miami Beach Hotel). Every year, the NLGJA garners hundreds of thousands of dollars in Big Media sponsorships for its convention; this year it appears (based on the sponsorship list below) that the total is around half a million dollars in corporate support... Our question for Fox News executives is: if you are truly “fair and balanced,” will you now give an equal and corresponding grant to Americans for Truth or another pro-family organization, say, Accuracy in Media, that counters the ubiquitous pro-“gay” spin in the media? We’ll be awaiting your answer.^[291]

Homosexual Agenda

For a more detailed treatment, see Homosexual agenda.

United States Supreme Court Justice Antonin Scalia wrote regarding the following regarding homosexuality and the law:

“ Today’s opinion is the product of a Court, which is the product of a law-profession culture, that has largely signed on to the so-called homosexual agenda, by which I mean the agenda promoted by some homosexual activists directed at eliminating the moral opprobrium that has traditionally attached to homosexual conduct.^[293] ”

Focus on the Family stated the following regarding the issue of the homosexual agenda in respect to the homosexual community:

“ It is an agenda that they basically set in the late 1980s, in a book called “After the Ball,” where they laid out a six-point plan for how they could transform the beliefs of ordinary Americans with regard to homosexual behavior — in a decade-long time frame...there is an agenda. They admit it privately, but they will not say that publicly. In their private publications, homosexual activists make it very clear that there is an agenda. The six-point agenda that they laid out in 1989 was explicit...^[294] ”

There were publications in 1987 and 1989 by homosexual activists Marshall Kirk and Hunter Madsen which outlined a strategy to change America’s perception of homosexuality and it included the following six strategies:

1. Talk about homosexuals and homosexuality as loudly and often as possible. (Through sheer perseverance the opposition will be worn down).^[295]
2. Portray homosexuals as victims, not aggressive challengers..^[296]
3. Give homosexual protectors a “just” cause..^[297]
4. Make homosexuals look good..^[298]
5. Make the “victimizers” look bad..^[299]
6. Solicit funds. For example, get corporate America and major foundations to financially support the homosexual cause..^[300]

Arguments Against Homosexuality are branded by homosexual activists and liberals as irrational and hateful with the use of terms like “homophobia”. However, this term itself can also be a form of intimidation against opposition.

Rather than attack their arguments they use a personal attack, labeling the opposer simply afraid. Pastor Darryl L. Foster, a former homosexual, states that homosexual activists are afraid of the testimony of ex-homosexuals to the public at large and that they suffer from "exgayphobia".

Peter LaBarbera

As noted earlier, Peter LaBarbera is the founder of Americans For Truth (AFT) which is a national organization in the United states devoted solely to confronting the homosexual agenda.^[302]

Peter LaBarbera said the following regarding the need for the organization Americans for Truth:

" Homosexual, bisexual, and transsexual groups spend tens of millions of dollars every year to market and normalize their aberrant lifestyles, yet after all these years there is not a single, serious national group dedicated specifically to exposing and countering their agendas... It's time for Americans to unapologetically resist the demands of this lobby, and to counter the lies upon which it is built-the foremost being that certain people are inherently or 'born' homosexual and that this is a civil rights issue.^[303]

"

Matt Barber

Matt Barber of Concerned Women of America is one the more notable figures in regards to opposing the homosexual agenda. Matt Barber wrote the following regarding the homosexual agenda:

✉ Matt Barber

“ Ironically, sexual relativists are anything but relative. They are quite affirmative in principle. But the principles they foist demand comprehensive acceptance of homosexual conduct — by force of law — through federal edicts such as “hate crimes” legislation, the so-called “Employment Non-Discrimination Act” (ENDA) and by imposing government sanctioned “same-sex marriage.” All such government mandates grant special protected “minority” status to those who define themselves by aberrant sexual preferences and changeable sexual behaviors. These laws put people with traditional values directly in the crosshairs of official government policy. Throughout society, homosexual activists demand that homosexual behaviors not only be “tolerated,” but celebrated. (That’s what the euphemistic slogan “celebrate diversity” supposes). They have masked their true political agenda by hijacking the language of the genuine civil rights movement and through the crafty and disingenuous rhetoric of “tolerance” and “diversity.” Anyone who believes the Biblical directive that human sexuality is a gift from God, to be shared between man and wife within the bonds of marriage, is branded “homophobic,” “hateful” or “discriminatory.” They are to be silenced by all means possible.^[304]

For many years, the American Psychiatric Association listed homosexuality as a mental disorder. However, the organization de-listed homosexuality in 1973.^[305] Since the late 1960s, many people, both homosexual and heterosexual, have lobbied for more favorable laws for homosexuals.

Legal “marriage” between same-sex couples is now recognized in Canada, Spain, South Africa, Belgium, Israel and the Netherlands. Most other western European nations and several US states recognize a more limited marriage or civil union. 26 US states have passed constitutional amendments banning recognition of same-sex marriages, and federal law does not recognize same-sex “marriage”.

The Homosexuality and Animals Myth

For more information please see: Homosexuality in Animals Myth

Dr. Carl Wieland - Managing Director of Creation Ministries International.

In respect to the homosexuality and animals myth, there is currently interest on whether homosexual behavior is or is not zoologically "natural." This is largely a sterile debate because behavior is not necessarily moral even if "natural;" because the nature of human beings is not necessarily the same as the nature of other species, and because it is not at all clear when an observed behavior can be counted as "sexual," or as implying a sexual "orientation." Also, Creation Ministries International wrote on this subject of whether or not there is homosexuality in the animal kingdom: "There is...documented proof of cannibalism and rape in the animal kingdom, but that doesn't make it right for humans."^[306]

A 1996 article, published by an organization committed to the treatment of homosexuality, musters the arguments against interpretation of animal behavior as sanctioning homosexuality.^[307] It notes that "homosexual scientist Simon LeVay" stated that the evidence pointed to isolated acts, not to homosexuality:

"Although homosexual behavior is very common in the animal world, it seems to be very uncommon that individual animals have a long-lasting predisposition to engage in such behavior to the exclusion of heterosexual activities. Thus, a homosexual orientation, if one can speak of such thing in animals, seems to be a rarity. "

In addition, Dr. Antonio Pardo, Professor of Bioethics at the University of Navarre, Spain, wrote:

"Properly speaking, homosexuality does not exist among animals.... For reasons of survival, the reproductive instinct among animals is always directed towards an individual of the opposite sex. Therefore, an animal can never be homosexual as such. Nevertheless, the interaction of other instincts (particularly dominance) can result in behavior that appears to be homosexual. Such behavior cannot be equated with an animal homosexuality. All it means is that animal sexual behavior encompasses aspects beyond that of reproduction."^[308] "

In July of 2009, an alleged homosexual penguin in a California zoo was debunked. Peter LaBarbera reported:

"San Francisco's Fox affiliate KTUV reports: "The San Francisco Zoo's popular same-sex penguin couple has broken up. "Male Magellan penguins Harry and Pepper have been together since 2003. The pair nested together and even incubated an egg laid by another penguin in 2008, but their relationship hit the rocks earlier this year when a female penguin, Linda, befriended Harry after her long-time companion died.

"Zookeepers say Harry and Linda are happy and were able to successfully nest this year," reported KTUV.

In July of 2009, an alleged homosexual penguin in a California zoo was debunked.^[309]

But not everyone is celebrating Harry and Linda's newfound love. Some believe there can be no such a thing as an "ex-gay" penguin. Upon news of Harry's decision to fly the same-sex-coop, outspoken pro-homosexual activist and anti-ex-gay crusader Wayne Besen cried fowl:

"Attempts to change sexual orientation are patently offensive, discriminatory by definition, theologically shaky, uniformly unsuccessful and medically unsound!" exclaimed a visibly angry Besen. "There is no 'ex-gay' sexual orientation. Harry is simply in denial. He's living what I call the 'big lie.'"^[310]

Lastly, a notable article was created on the subject of whether or not animal homosexuality exist entitled *The Animal Homosexuality Myth* and it was written by Luiz Sérgio Solimeo.^[311]

Claims of Hate Crimes

It is claimed that about 1100 hate crimes against homosexuals or their property occurred in 2004.^[312] But most of those offenses occurred against property rather than individuals, often the result of drugs or alcohol. Only a tiny percentage even involved aggravated assault or worse, and those classifications are not based on any proof at trial.^{[313][314]} 74 % of hate crimes are either crimes against property (e.g., theft, vandalism or graffiti) or a vague "intimidation".^[315]

The degree of accuracy of statistics regarding homosexual hate crimes is debatable. For example, there are the homosexual hate crime hoaxes where homosexuals deceitfully faked hate crimes which never occurred.^{[316][317][318]} An other example would be national statistics in the United States regarding homosexuals committing hate crimes against heterosexuals may be underreported and non-hate crimes against homosexuals are classified as hate crimes when they should not be (see: hate crimes for further details).

Homosexuality Statistics - Percentage of Individuals Who Are Homosexuals

For additional homosexuality statistics please see: Homosexuality Statistics

The Traditional Values Coalition stated the following regarding homosexuality statistics:

"A NEWLY RELEASED REPORT from the Centers for Disease Control's National Center for Health Statistics reveals that only 2.3 % of the population considers themselves homosexual. The statistics come from a 2002 National Survey of Family Growth and are based on 12,571 interviews with men and women ages 15-44 years of age. (The findings were reported in WorldNetDaily, September 16, 2005).^[319] "

There have been a number of studies inside and outside the United States which have estimated the percentage of homosexuals in the human populations they studied.

History of homosexuality

For additional information please see: History of homosexuality

As alluded to earlier, one of the most interesting matters regarding the history of homosexuality is that it has been rare in a number of cultures or been absent in some cultures. For example, Dr. Neil Whitehead and Briar Whitehead state regarding various cultures: "If homosexuality were significantly influenced by genes, it would appear in every culture, but in twenty-nine of seventy-nine cultures surveyed by Ford and Beach in 1952, homosexuality was rare or absent."^[320]

Two areas of historical inquiry in relation to ancient occurrences of homosexuality which have been studied by historians are Roman homosexuality and Greek homosexuality.

Historical Critical Method - ELCA (2013-03-28 20:09)

Will we

trust in a wise God or 'wise guys'? Have you ever sat in church, about to 'doze off', when the pastor throws a zinger at you like, "

Jona

h wasn't

really

swallowed by a whale

”

,

“

th

e Lord

didn't

really

part the

Red

Sea

”

?

“

God didn't really create all things in six days

”

?

Or “what God calls ‘sin’ in His Word, really isn't sinful anymore”?

Not only do you wonder if you

‘

really

,

heard what you ‘thought’ you he

ard, but

just

then

your spouse jabs

you in the ribs,

so the pastor do

esn't catch you dozing. Y

ou

then

hear

your pastor

give you all the reasons why science, history and archaeology have proven Scripture wrong in parts ; but , the pastor consoles, ' Scripture can be factually wrong, and still meaningful to your faith life '! At that point your head's spinning , so you jab your spouse back, to see if she heard the pastor say what you 'thought' he just said. So you leave church, grit your teeth and say ' nice sermon pastor , as you try to find comfort from a Bible that your own pastor told you, " you can't trust it completely ". So then, when you visit your pastor on Monday and ask him how you can discern what parts of the Bible are true and what parts are not true, your pastor gives you a long

,
convoluted answer
of a
“
theory
”
he learned at the seminary,
about how we need to ‘find the real story behind t
he written text of the Bible
,
You’
re told
that you can’t just read God’s Word at face value, and
trust all that you’re reading. He might even toss in a ‘zinger’ like:
“Don’t you know that science has proven much of it to be untrue?”
Although your pastor doesn’t come right out and say so,
what you are actually being told is
:
“
you nee
d to replace your belief in the inerrancy of God and His Word, with the inerrancy of man and his
theories
.”
Y
ou need to ‘leave it to the
seminary-trained
professionals’
(mainly
of the last 50 years),
to tell you what God’s Word says, because y
ou can’t trust what the Bible
clearly says
, or what your pastors
more than
50 years ago taught you

!

What you have just experienced is the invasion of the

“

Historical Critical

M

ethod

”

of

i

nterpreting the Bible! T

his ‘

new method’

of studying the Bible

has only been around in the last 200 years of Christianity, but for the most part, only

in

the last 50-70 years in American Christianity.

It’s the “new kid on the block”, but i

t is this method that is the

enemy

of the Historic Christian faith that

y

our parents and grandparents were taught from pastors and professors who were faithful to God’s Word. Many laypeople wonder

:

“

what has happened

to our church?”

And the answer is:

the “

Historical Critical Method”.

It

has led

countless churches,

denominations

, pastors and laypeople away from the

rock-

solid foundation of God

's life-giving Word, to doubt

and question the Bible

and the

faith

of prior generations of believers.

Sadly, many

laypeople remain in churches where they are convinced from t

he Bible that their

pastor is teaching wrong, but the

y

co

nsole themselves

: “

Well, it must just be th

is

pastor. W

e'll get a new pastor

someday

, and all will be well”

.

Yet,

their denomination only continues to fall further and further away from God's Word, regardless of how many pastors the

ir

church gets

.

What happened to the chu

rch of our grandparents?

I don'

t know how to say it

more clearly, but the problem is

that most of the mainline denominations, and most of the seminaries, and most of the pasto

rs

have adopted the “

Historical Critical Method”

of interpretation – and much of
this has only taken place in
the last 50

-70 years. This method is why you hear things being preached and taught that are contrary to God's Word, and to what prior faithful generations learned!

So what's the solution?

There is no "easy" solution any longer. Most of the seminaries of the mainline churches have made their bed with the

"Historical Critical Method"

, and

what they

are

teaching our

future

pastors is that you "

cannot take the Bible at face value";

whenever you find something in science, history, archaeology, culture,

etc.... that questions it. So is there any solution? About the best solution is this: FAITHFUL LAYPEOPLE. "

It's time for laypeople to stop being married to a church body

, a denomination, or a

building

; but to be married

to Christ and His Word!"

The church needs faithful lay

people to

start measuring

their church's doctrine,

the

ir

pastors

' preaching, and

and their Sunday School's lessons

by the Word of God. We see a great example of this in Acts 17 with the Christian church at Berea, where we're told: "

Now the

Bereans

were of more noble character than the Thessalonians, for they received the message with great eagerness

,

and examined the Scriptures every day to see if what Paul had said was true.”

In I John 4:1 we read, “

Do not believe every spirit, but test the spirits to see whether they are from God, because many false prophets have gone out into the world.”

Sadly,

I've heard many examples of churches where the members will argue whether or not to

buy this

item for the church kitchen,

whether or not to buy new hymnals

for the pews

; but when the church is teaching false doctrine, these same laypeople will not utter a sound, but keep attending the church, which send

s

a

terrible mixed message to our

children of holding onto God's Word. The faith of your children and grandchildren is largely dependent on what you the parents will do in defending or taking a stand for the truthfulness of God's Word.

On

c

e faithful laypeople begin to measure their church's

doctrine,

and

their

pastors' teaching

s,

with the Word of God,

if the truthfulness and complete reliability of God's Word is being questioned

by the pastors, professors,

or

leaders of you

r church, then first try to

work with them to try to call them

, yourself,

and your congregation
 to repentance, forgiveness in Jesus, and a return
 to the
 truth
 of God's Word. However,
 there may come a point, where "IF" your pastor or church
 body
 refuses to
 repent, turn from false doctrine,
 and te
 ach ALL that God's Word teaches
 , then faithful laypeople will fo
 llow Christ and look for a faithful
 church, rather than being married to a denomination or building.
 Paul warns Timothy and us in 2 Timothy 4:3-4, "

The time will come when men will not put up with sound doctrine. Instead, to suit their own desires they will gather around them a great number of teachers to say what their itching ears want to hear. They will turn their ears away from the truth, and turn aside to myths."

MAC OS X is pretty stupid right now. Mac OS X is the most vulnerable and most expensive. Any Mac OS X is easy to hack. The US military and Government use the Linux operating system. Linux and FreeBSD have way too many free upgrades to ever get an virus. Linux and FreeBSD is the future. Android Linux phones are even going to surpass iPad and iPhone in the future. Firefox Linux is going to be competitor to Android in the near future. Mac OS X cannot compete with free upgrades, Windows applications in Wine, and virtualization.

My cousin (Sheree) loves cats, Tomb Raider and The Nightmare before Christmas. I think that is her book collection. She said she owned less PS2 and PS3 games than me, but still a lot more than average including every Tomb Raider videogame made for at least Playstation 1,2,and 3. She does not own Tomb Raider for Sega Saturn or Dreamcast.

They used to own this buick sports car

I only own two cats.

Playstation 4 specs (2013-04-02 11:43)

Yesterday, Sony officially revealed the PlayStation 4 at an event in New York City. Although Sony announced a number of specs and highlighted some upcoming features, it didn't really break down what those components meant. We take a look back at the details and highlight the important parts of what Sony did — and did not — say at yesterday's event.

First and foremost, Sony highlighted the PlayStation 4's similarity to a PC. This emphasis was more for developer benefit than consumers. One of the biggest complaints with previous Sony consoles has been the custom hardware. Yes, the hardware was solid, but developing for the PlayStation 3 while also developing for the Xbox 360 and PC was not a simple task. Now that the underlying hardware is basically a gaming PC, developers won't need to learn a whole new set of hardware. This is similar to the approach that many current arcade games use.

Breaking down the hardware

CPU: 8-core x86-64 AMD "Jaguar"

GPU: 1.84 TFLOPS integrated Radeon

The PlayStation 4 is set to use a custom version of one of AMD's APU processors. Recently introduced by AMD, these chips combine a traditional CPU and GPU on a single die. Initially they were used in laptops, but the APUs are also used in desktop machines. Jaguar chips are not currently available in the marketplace, though AMD did show off working samples at CES in January. Those were "Temash" chips, which are low-power versions and meant for tablets. The Jaguar targeted for the PlayStation 4 will likely be part of the "Kabini" family. Initial versions of the Jaguar APU will be 28nm, though AMD expects to get that down to 20nm.

Assuming Sony does use a Kabini family APU, one of the key advantages will be low power consumption. Low power consumption means less heat, and less heat means less cooling is required. If Sony can keep heat generation to a minimum, fans need to run less often, keeping system noise to a minimum.

One key feature of the Jaguar APU is the fact that each core is completely independent. In the standard version announced by AMD (which features four cores), the only shared component is L2 cache. The stock version features 2 MB of L2, with each core getting one quarter of that. Since the PlayStation 4 version is slated to have eight cores, it is likely that the PlayStation 4 APU will feature at least 4 MB of L2. This is because the each Compute Unit on the Jaguar contains four cores and the L2 cache. An eight-core version of the APU will simply contain two full CUs.

Because the Jaguar APU is a full system-on-a-chip design, it supports all of the instruction sets found on standard

64-bit x86 compatible processors. Additionally, the Jaguar includes AES-NI, which is used to accelerate AES data encryption. It is likely that AES will be an integral part of the PlayStation 4's security features.

Comparatively speaking, there are no public benchmark numbers for the PlayStation 4 processor; however, the fastest AMD APU currently available is the A10-5800K. On the PassMark CPU Mark test, it rates an average score of 4,439, which is comparable to an Intel i7-3520M and an AMD Phenom II X4 970. Keeping in mind that the A10 is a previous generation APU and it has fewer cores than the Jaguar, the PlayStation 4 CPU should rate significantly higher. We're including the performance number above in order to give a baseline performance estimate.

As far as the GPU is concerned, Sony was mum on specifics, but since it is using the Jaguar APU, the GPU component will likely be derived from the Radeon 8000 line. Comparing specific features isn't really possible at this time, but the stated 1.84 TFLOPS of performance allows for a general comparison with current PC graphics cards. AMD's own Radeon HD 7850 currently boasts 1.76 TFLOPS, and that is considered a mid-range video card. On the high end, nVidia's GeForce GTX Titan boasts 4.5 TFLOPS.

It is likely that even faster cards will be available in the PC market by the time the PlayStation 4 hits retail shelves at the end of this year. Still, the stated performance is nothing to laugh at. Just don't expect the PlayStation 4 to surpass a high-end gaming PC in terms of image quality or performance.

RAM: 8 GB of GDDR5, Unified System Memory

While many will focus on the PlayStation 4's processor, it is the inclusion of 8 GB of GDDR5 that will make developers take notice. Along with the APU, it is also likely one of the most expensive components in the PlayStation 4. Rough estimates based on numbers from Mercury Research place the cost of 1 GB of GDDR5 between \$16-19 and 2 GB of GDDR5 between \$37- \$49.

GDDR5 RAM is desirable because it's fast. Really fast. You won't see it used as system memory in gaming PCs (the vast majority use DDR3), but all of the high-end video cards come with GDDR5 standard. Since the PlayStation 4 is going to use a unified memory model, game developers will be able to allocate memory as they see fit, giving them a greater deal of flexibility than the PlayStation 3.

HDD: Unknown Size

Like the PlayStation 3, the PlayStation 4 will ship with a hard drive as standard. No size was announced, but given hard drive prices, we would be surprised if anything less than 500 GB was standard.

Disc Drive: Blu-ray (6X Speed)

The press conference didn't focus on it, but the PlayStation 4 will definitely have a Blu-ray drive inside for playing both movies and games. The primary reason this is worth noting is the increased speed. This means higher transfer rates, so installing games from disc won't be as annoyingly long as it currently is on the PlayStation 3

Networking: Gigabit Ethernet and 802.11 b/g/n Wi-Fi

Most consumers likely won't care about Gigabit Ethernet, but the inclusion of 802.11n Wi-Fi support will be a welcome addition.

Connections: USB 3.0, Bluetooth 2.1, HDMI, Optical Audio, Analog-AV, AUX

Though the USB and Bluetooth specs have been updated, from a usability standpoint, they should work the same as the current ports on the PlayStation 3. The main difference with USB 3.0 is a faster transfer rate. HDMI and Optical Audio are standard connectors, and unless Sony decides to change just for the sake of change, the Analog-AV connection should be the same multi-out that Sony has used since the original PlayStation. The AUX port is for the PlayStation 4 Eye.

PlayStation 4 Eye:

An updated version of the PlayStation Eye, the new unit contains two cameras with an 85 degree field of vision. Each camera runs at a resolution of 1280x800. It also features four microphones. The updated Eye does not appear to use an IR camera, unlike the Kinect, which uses IR for depth. There is also no visible motor on the Eye, though the large field of view likely makes that unnecessary.

DualShock 4:

An evolution of the DualShock 3, the most notable changes are the concave analog sticks, the touchpad and the inclusion of a headset jack. A chat headset will ship with the PlayStation 4. There is also a multi-colored light bar at the top of the controller that can be used to indicate pre-defined status messages as well as act as a tracking indicator for the PlayStation 4 Eye.

Breaking down the software features

Backward Compatibility:

The PlayStation 4 will not be backward compatible out of the box. This means that it will not play any prior PlayStation games, whether they were released on disc or purchased digitally from PSN. Sony did mention the possibility of using the Gaikai technology to stream older games in the future, but this was just a possibility.

From a feature perspective, the lack of any backward compatibility appears to be a mistake on Sony's part, as the company has prominently featured backward compatibility in its prior systems. While PlayStation 3 backward compatibility is likely not possible due to emulation overhead, there is no reason why the PlayStation 4 shouldn't be compatible with PSone, PlayStation 2 and PSP software. The hardware is more than powerful enough to run those titles via purely software emulation.

With no definite backward compatibility plan on the horizon, PlayStation 3 owners (especially those with large PSN libraries) should plan on keeping their current console and not selling it in order to upgrade.

Remote Play:

Remote Play will allow you to run a game on the PlayStation 4 but view it and control it via the Vita. If this sounds familiar, it should. Sony previously announced the feature for the PlayStation 3 but never fully rolled it out due to technical issues. Unless you have a modded PlayStation 3, it's a feature you have probably never used. Assuming the technical issues are resolved for the PlayStation 4, this alone could be a reason to purchase a Vita. Bonus points if Remote Play also supports streaming movies to the Vita.

Share:

It is a button on the DualShock 4, but the magic is in the software. Pressing that button allows you to broadcast your gameplay directly from the system, no video capture box required. As live-streaming game footage becomes more popular, this is a feature that has the potential to catch on like wildfire. Yes, a handful of games, such as Call of Duty: Black Ops II, currently offer integrated live streaming, but that is dependent on the developer for support. With the PlayStation 4, you'll be able to do it in any game.

The PlayStation 4 will also allow game spectating, just like OnLive. Players will be able to view the game you're playing as well as leave comments. Taking things a step further than OnLive, the PlayStation 4 will also offer a remote help feature. If you're having trouble playing a game, you can ask a friend for help and let them control your system remotely. Your PlayStation 4 will still be running the game, but it will be controlled by your friend's PlayStation 4. Once you've gotten past the trouble spot, your friend can pass the controller back.

The help system sounds like an innovative feature, though it will be interesting to see how it gets exploited (and if Sony can do anything to stop it). Such a feature could potentially allow for enterprising individuals to offer paid-for-leveling services. It could also potentially allow someone to virtually "rent" a game they purchased to others. After all, if you're not going to be using your PlayStation 4, why not subsidize a new game by letting someone connect remotely and pay for the privilege? Gamers found a way to monetize the game-sharing feature on the PlayStation 3. It would be folly to assume the same won't happen with the PlayStation 4.

Social:

Social was a major component of the PlayStation 4 presentation, and Sony announced both Facebook and Ustream as partners. There was talk of a gaming-specific social network, so it is possible that Facebook integration isn't as bad as it sounds, though we wouldn't be wholly surprised if a Facebook account is required to use the social features on the PlayStation 4.

Sony also plans on extending the social features to other devices, such as tablets and smartphones, so you can be connected to PSN even while away from your PlayStation 4. We got the sense that this would be similar to what Microsoft is doing with SmartGlass on the Xbox 360.

Playstation 4 will have an offline mode unlike Xbox 720! (2013-04-03 00:01)

I love the Playstation 4, it will have a hard drive that will record everything as you play. It will be offline for anti-social gamers, and Sony understands this. It will be reasonably priced. It won't have the rings of death. You can have a

remote gameplay where a friend can unstuck you. PS4 going to have Final Fantasy XV on it! You can buy used games at a thrift store and play on any Playstation 4. Games will be on blurays.

Xbox 720 will be always online which is a bad thing. It'll have three rings of death. It may be less powerful. The always online mode wil kill Xbox 720. The always online MMORPGs like World of Warcraft and Diablo 3 only have a couple million playing online at any given time. Xbox 720 sales are going to be screwed unless Microsoft changes it to offline mode.

I love this controller. I love Dual Shock. I would love Dual Shock 3 for PS4, but this touch screen is a bonus.

I have seen Killzone: Shadow Fall and Destiny screenshots. They look superb. I'd pay \$500 for PS4 and Dual Shock 4 tomorrow. Playstation 4 is TWO YEARS LATE! I had my Radeon HD 5970 Black Edition (DirectX 11 GPU) for over Three years. CONSOLES ARE SUPPOSED TO HAVE 5 YEAR LIFESPANS, NOT OVER SEVEN YEAR LIFESPANS!

I hear on other [stupid] websites, how the games don't look good enough. PS4 is over two years late, and the graphics are clearly better than a hypothetical PS4 released in 2010. The reality is PS4 is late to market and nobody has the same amount of income as they did in 2010. It seems the longer Sony drags out PS4, the less games people buy. The President Bush tax cuts have ended in 2012. Nintendo was brilliant in seeing Bush tax cuts ending and releasing Wii U before 2013.

Turks and Caicos Islands vacation (2013-04-06 05:47)**Bought Game of Thrones (2013-04-11 19:34)**

I was at Best Buy where I bought season 1 & 2 of Game of Thrones. I own the novel series. Do not believe any of those negative reviews. I honestly cannot understand why some reviewers have given this such a low rating. I think some people love the sound of their own voice and think their opinion is worth something and will be disagreeable simply for the sake of it. Having said that, this show is stunning. I have never read the books and now I want to. There is so much crap on TV that is renewed year after year (CSI, House etc.) which uses cheap gags, pointless and sometimes ridiculous plots, unbelievable and many times one dimensional characters and yet all the truly great shows get cancelled. There is enough brain-dead television. But once in a while a show comes along that transports you

to another world and makes you believe in the magic of television again. Game of Thrones is one such show. It is complex, multi-layered, surreal, vibrant, imaginative and it draws your eye in to the surprising level of detail, from the sweeping vistas, to the narrow dungeons, from the beautiful castles and magnificent trees, to the contrasting landscapes. It is worth watching just for the scenery alone. Yes the acting seems a little cold and even wooden at times, but this is perfectly in keeping with the medieval look and feel of the show. Yes it is dark and gloomy, but again in keeping with the narrative. The scripting is intelligent and well delivered by competent acting, led by Sean Bean perfectly cast as Lord Edard. Although Sean Bean is better known for brooding bad guys, he strikes the perfect balance between father, husband and Lord and soldier. He is well supported by other well known actors and many new to the scene. After watching and sometimes enjoying Camelot, this show makes that one look more like "Merlin" by comparison. And where Camelot lacks in depth and scripting, Game of Thrones strikes the perfect balance between brooding medieval angst and wonderful fantasy story telling.

Gamerankings and Metacritic matter a lot (2013-04-14 07:10)

Metacritic Matters: How Review Scores Hurt Video Games

Bugs in Fallout: New Vegas might have eaten your save file. Maybe they took away a few hours of progress, or forced you to reset a couple of quests. Maybe game-crashing bugs pissed you off to the point where you wished you could get your \$60 back. But they probably didn't cost you a million dollars.

Why Are Game Developer Bonuses Based On Review Scores?

Last night, Obsidian's Chris Avellone tweeted an interesting detail about his roleplaying game ... Read...

Perhaps you've heard the story: publisher Bethesda was due to give developer Obsidian a bonus if their post-apocalyptic RPG averaged an 85 on Metacritic, the review aggregation site. It got an 84 on PC and Xbox 360, and an 82 on PS3.

"If only it was a stable product and didn't ship with so many bugs, I would've given New Vegas a higher score," wrote a reviewer for the website 1up, which gave New Vegas a B, or 75 on Metacritic's scale.

"It's disappointing to see such an otherwise brilliant and polished game suffer from years-old bugs, and unfortunately our review score for the game has to reflect that," said The Escapist's review, which gave the game an 80.

If New Vegas had hit an 85, Obsidian would have gotten their bonus. And according to one person familiar with the situation who asked not to be named while speaking to Kotaku, that bonus was worth \$1 million. For a team of 70 or so, that averages out to around \$14,000 a person. Enough for a cheap car. Maybe a few mortgage payments.

Those sure were some costly bugs.

This is not an anomaly: for years now, video game publishers have been using Metacritic as a tool to negotiate with developers. And for years now, observers have been criticizing the practice. But it still happens. Over the past few months, I've talked to some 20 developers, publishers, and critics about Metacritic's influences, and I've found that the system is broken in quite a few ways.

There is something inherently wrong with the way publishers use Metacritic. And something needs to change.

Why Metacritic Matters

Hop into a debate with some video game fans on your favorite message board, and there's one subject that will always come up: review scores. Which game scored the highest? Which scored the lowest? Which are the best review websites? Which are the worst?

Inevitably, at some point, someone will jump into the fray and say something like "lol review scores mean nothing anyway." To some people, maybe that's true. But to the people who make and sell video games, review scores are more important than many casual fans realize. Mostly because of Metacritic.

For the uninitiated: Metacritic is an aggregation website that rounds up review scores for all sorts of media, including video games. The people who run Metacritic take those scores, convert them to a 100-point scale, average them out using a mysterious weighting formula (more on that later), and spit out a number that they call a Metascore, meant to grade the quality of that game. The Metascore for BioShock Infinite, for example, is currently an 94. Aliens: Colonial Marines? 48.

To people who work in gaming, these Metascores can mean a lot. Say you're a developer who needs money. You've got some ideas to pitch to publishers. You take some meetings. They're going to ask: just how good have your games been?

"Typically, when you go into pitch meetings and whatnot, publishers are going to want to know your track record as far as Metacritic," said Kim Swift, a game designer best known for helping create games like Portal and Quantum Conundrum. "As a company, what is your Metacritic average? As an individual, what is your Metacritic average?"

Swift works for Airtight Games, an independent studio that is tied to no publishers. Their Metacritic history: Dark Void, which has a 59 on Metacritic, and last year's Quantum Conundrum, which sits at 77.

In order to survive, studios like Airtight have to negotiate deals with big companies like Capcom and Square Enix. Often that means talking about Metacritic. Sometimes that means wearing their history of Metacritic scores like a scarlet letter.

This is common. An employee of a well-known game studio told me about a recent pitch meeting with a publisher, during which the publisher brought up the studio's last two Metacritic scores, which were both average. The studio employee asked that I not name the parties involved, but claimed the publisher used the Metascores as leverage against the studio, first to negotiate for less favorable terms, and then to turn down the pitch entirely.

Often, developer bonuses or royalties are tied to game review scores. Fallout: New Vegas is one high-profile example, but it happens fairly often.

"It's pretty common in the industry these days, actually," Swift told me. "When you're negotiating with the publisher for a contract, you build in bonuses for the team based on Metacritic score. So if you get above a 90, then you get X amount for a bonus. If you get below that, you don't get anything at all or get a smaller amount."

In other words, a developer's priority is sometimes not just to make a good game, but to make a game that they think will resonate with reviewers.

"When you're working on a game, part of what you want to do is have a high score," said Swift. She said she'd never seen a developer change part of a video game just for the sake of raising scores, but the influence is undoubtedly there.

"It's usually some other thing like, 'Hey, we could use another couple hours on this game because people perceive a longer game to be a higher value,'" Swift said. "It's never directly pointing back to, 'This is gonna improve our score by X number of points.'"

Matt Burns, a longtime game designer who worked for a number of big shooter companies and now makes indies with his company Shadegrown Games, wrote about his personal experiences with Metacritic back in 2008. Burns said he watched firsthand as a development studio worked as hard as possible to make a game that would snag high review scores.

"Armed with the knowledge that higher review scores meant more money for them, game producers were thus encouraged to identify the elements that reviewers seemed to most notice and most like—detailed graphics, scripted set piece battles, 'robust' online multiplayer, 'player choice,' and more, more of everything," Burns wrote.

"Like a food company performing a taste test to find out that people basically like the saltiest, greasiest variation of anything and adjusting its product lineup accordingly, the big publishers struggled to stuff as much of those key el-

ements as possible into every game they funded. Multiplayer modes were suddenly tacked on late in development. More missions and weapons were added to bulk up their offering—to be created by outsource partners. Level-based games suddenly turned into open-world games.

“Before you cry in despair, keep in mind that all these people wanted in the end was the best game possible—or, more precisely, the best-reviewed game possible.”

And then there’s this wry joke by Warren Spector, talking about the words that influenced his career during a talk at the DICE conference earlier this year. Powerful words. Legacy. Mentor. And...

While chatting with Obsidian head Feargus Urquhart for the profile I wrote last December, I asked him about what had happened with *Fallout: New Vegas*. For legal reasons, he couldn’t get into the specifics.

“I can’t comment on contracts directly,” he said. “But what I can say is that in general, publishers like to have Metacritic scores as an aspect of contracts. As a developer, that’s challenging for a number of reasons. The first is that we have no control over that, though we do have the responsibility to go make a brilliant game that can hopefully score an 80 or an 85 or a 90 or something like that.”

According to Metacritic’s rating scale, any game above a 75 is considered “good,” but realistically, according to multiple developers I spoke with, publishers expect scores of 85 or higher. Sometimes, Urquhart told me, the demands can get unreasonable.

“A lot of times when we’re talking to publishers—and this is no specific publisher—but there are conversations I’ve had in which the royalty that we could get was based upon getting a 95,” he said. “I’ve had this conversation with a publisher, and I explained to them, I said, ‘Okay, there are six games in the past five years who have averaged a 95, and all of those have a budget of at least three times what you’re offering me.’ They were like, ‘Well, we just don’t think we should do it if you don’t hit a 95.’”

That’s the developer’s perspective. Now let’s look at this from the other side. Say you’re a publisher. You’re about to sign a seven- or eight-figure deal with a development studio, and you want to make sure they’re not going to hand you a clunker. Why not use Metacritic as a security blanket in order to minimize risks and ensure you get yourself a great game?

Here’s some very reasonable rationalization from a person who worked at a major publisher and asked not to be named:

“Let’s say that [a publisher] wanted to pay \$1 million up front (through milestone payments over the course of development), but the developer wanted \$1.2 million. If they wouldn’t budge, sometimes we would offer to make up the difference in a bonus, paid out only if the game hit a certain Metacritic.

“That conversation could happen during development too. Maybe a developer wanted more time and money in the middle of the production, to make a better game. So the counter was, ‘If you’re so sure it will make the game better, we’re gonna tie the additional funds to the Metacritic score.’ It was a way to minimize risk.”

But a different person who once worked for major publishers says that Metacritic scores are just an excuse publishers use in order to deprive developers of the bonuses they deserve.

“Well, generally the whole Metacritic emphasis originated from publishers wanting to dodge royalties,” that source said. “So even if a game sold well, they could withhold payment based off review scores... The big thing about Metacritic is that it’s always camouflaged as a drive for quality but the intent is nothing of the sort.”

Multiple developers I spoke to echoed similar thoughts, although nobody could share hard evidence to back up this theory. I reached out to a number of major publishers including Activision, EA, and Bethesda, but none agreed to comment for this story.

Marc Doyle, the former lawyer who co-founded Metacritic in 2001 and keeps it running every day, told me during a phone conversation last week that he feels no responsibility for what video game publishers or developers do with his website.

“Metacritic has absolutely nothing to do with how the industry uses our numbers,” he said. “Metacritic has always been about educating the gamer. We’re using product reviews as a tool to help them make the most of their time and money.”

But gamers aren’t the only ones who use Metascores. Not by a long shot. Even the massive Japanese publisher Square Enix recently cited Metacritic as one of the factors they used to predict sales for their games.

”Let’s talk about *Sleeping Dogs*: we were looking at selling roughly 2.25 million units in the EUR/ NA market based on

its game content, genre and Metacritic scores,” former Square Enix president Yoichi Wada wrote in a recent financial briefing. “In the same way, game quality and Metacritic scores led us to believe that Hitman had potential to sell 4.5 5 million units, and 5 6 million units for Tomb Raider in EUR/ NA and Japanese markets combined.”

“Review scores are a part of our industry and it’s something we pay attention to as developers,” said Swift. And they lead to trends. “Review scores of this year are gonna drastically affect what’s gonna be seen next year,” she said. Even big retailers like Walmart and Target ask publishers for Metacritic predictions when deciding whether or not to feature certain games.

“One of the criteria [retailers] have is, ‘What’s the review score gonna be?’” said Tim Pivnicny, vice president of sales and marketing at Atlus USA. “That comes up a lot... They’re concerned if it’s going to be a good game.”

Metacritic has a significant influence on the way games are produced today. That’s a problem.

The House Speaker leader (2013-04-17 09:52)

Page Two --

While we Republicans are committed to fixing the broken tax code, solving the debt problem and growing the economy, Democrats are out campaigning to take back the House and give President Obama total control of our federal government.

You've probably seen the President on TV recently.... he's picking fights and using Head Start kids, firefighters and our military as political props in his push to raise taxes.

President Obama has a whole laundry list of second-term priorities -- like a "cap and trade" national energy tax -- that he knows he can only get with Nancy Pelosi holding the Speaker's gavel. That's why he's directed his billion-dollar political machine to target Republicans in Congressional Districts across America.

Your continued support is critical to ensuring that Democrats don't retake the 17 seats needed to win control of the House.

And that's what your **Pledge of Support** is all about.

While the liberals rely on Big Labor Bosses and Hollywood millionaires, House Republicans depend on hard-working NRCC members like you.

That is why I hope you will return your pledge today.

Asking for your support doesn't come naturally to me -- I never dreamed I'd one day serve as Speaker of the House.

You see, my days used to revolve around raising my two daughters and my small business in southwest Ohio. My job wasn't all that glamorous, but it put food on the table, and bought presents at Christmas.

Still, running a small business was one of the proudest moments of my life. And it gave me perspective on the role of government in our economy that still drives me to this day.

So when we Republicans talk about the need for a balanced budget, it's not just about adding up numbers.

It's about creating jobs and increasing wages.

It's about a more secure retirement for seniors, and more opportunities for young Americans.

And it's about making it easier for millions of small business owners, who -- like me -- just want the opportunity to chase their American Dream.

It's up to us to lead the fight to improve the lives of the American people, grow our economy, and expand opportunities for everyone.

With one voice, we must continue to call for common-sense proposals like "No Budget, No Pay," the Keystone pipeline and Paul Ryan's balanced budget.

Next page, please...

Page Three -- Ian

We've turned some heads these past few weeks... we forced Senate Democrats to agree to pass a budget for the first time in four years and we've put the President on defense.

This isn't the way the liberal media said 2013 was supposed to be. This was supposed to be the president's honeymoon, and our nightmare.

Instead, he's been the one on the ropes. Why? Because of patriots like you who are standing up, and joining our fight.

And because he can't respond to our simple question: we're going to balance the budget. How will you?

But still, don't think for a minute that we can afford to let up in our fight for a smaller, less costly government.

The President and his newly reorganized political operation, Organizing for Action, are going to spend millions trying to destroy our party.

And if Organizing for Action wins... If President Obama gains complete control of Washington again, Democrats will have unchecked power to double-down on his liberal agenda that produced the "stimulus," ObamaCare, and trillions of dollars in new debt.

We can't allow that to happen.

Please sign the enclosed **Pledge of Support** today and send it back in the postage paid envelope so I know you are with us.

Make sure to include with your pledge a gift of \$50, \$75 or even \$100 to help Conservatives stay on the offensive.

Thank you for your dedication and hard work.

Sincerely,

John A. Boehner
Speaker of the House

P.S. Ian, please say you will fight for freedom by signing your Pledge of Support today. We must speak out against President Obama's policies together to ensure that the United States remains the land of opportunity.

I also ask that you include a gift of \$50, \$75 or even \$100 with your signed pledge. If you respond by June 4th I will match your gift dollar for dollar. Thank you.

Today Gamespot, Tomorrow Youtube (2013-04-20 03:33)

Post humoristly, I waited since January 2010 to become officially popular at Gamespot. That's great, yet I wanted to be popular sooner in 2010. The PS4 offline console blog entry made me popular. I want 1000 subscribers on Youtube as well. I want 100 subscribers on IGN.com. I am jealous of wall comments the mass majority had for multiple years on their Youtube, IGN.com, and Facebook. It's ironic I get my popular icon in April since I've had Netscape in 1996. It's sad that it took me 15 years after N64 ownership to be [just barely] popular status. I should be popular at a number of places a lot sooner.

Best 5 SNES SHMUPs (2013-04-22 16:17)

5. Macross: Scrambled Valkyrie (1993)

I didn't discover this one until fairly recently as it was only released in Japan but I was certainly glad I did find it! It's based on an older anime and as such you can choose between three characters, each of whom has their own variation of the 'Valkyrie' fighter with unique weapons, all of which can be upgraded. The ships have an energy meter rather than lives and they can also switch between three different forms at will too, each of which is more useful in certain situations than others, as you might expect. There's a good few other nice features here too (including enemies with tractor beams - grrr!) and that, combined with the superb graphics and decent soundtrack, makes this a pretty damn fine shmup. It would be higher on the list if only it wasn't so bloody difficult though!

4. UN Squadron (1994)

I heard of this growing up but only played the arcade version (SNK Neo Geo, anybody). The arcade game didn't stand out to me and I never seen the SNES version in stores or at the video rental place. That means I wouldn't play this thing until 2011. I have to say, this is one of those rare special games that is so awesome, I have to wonder why I never found it till so late in life? Let us count the ways. Play control- This plays alot like gradius or maybe choplifter in that its left to right and sometimes right to left shooting things along the ways. Where this kicks Gradius's ass is, besides cusomizing what you power up, you also get to buy and change jets. Now think Gradius meets Grand Turismo. I had a strong preference towards the A-10 Warthog. Sure, you're flying a bomber against fighter jets but its the only aircraft that shoots diagonally downwards. You also have a wide array of ordnance that you can buy and equip to each aircraft you have. Difficulty- fairly steep. You will get used to starting over often if you spend any amount of time with this. That is the price of the old school for you, though. It is a scientific fact that engineers have been researching and streamlining games for years to make games impossible to loose at so the normal idiot gamer won't feel like less a man for continuing.

3. R-Type 3 (1994)

Despite its name, this is actually the sixth game in the great R-Type series and for many people the best. It would be nearly impossible for it to have anywhere near the impact of the first title but it adds a lot to the existing games. Not least is the ability to choose from three different Forces, each with its own weapons, and it must also surely rank as the finest shmup on the SNES, graphically. It features none of the slowdown that blighted the otherwise awesome Super R-Type but adds bigger sprites, some fantastic backgrounds, and superb bosses. The levels, too, are pretty creative with not only the usual kinds of enemies but also all manner of moving scenery which actually causes more problems than the enemies do. Indeed, this is a notoriously tough game and one that I've never managed to finish but I've sure enjoyed trying!

2. Axelay (1992)

Konami unleashed this amazing game pretty much out of the blue and it took SNES owners by storm, myself included! There could be many reasons for this including the graphics which are at worst good, and at best jaw-dropping, or the fantastic soundtrack, but it must surely be the innovative and varied stage design that clinched it - there's a few new ideas here which work really well. For starters the game alternates between vertically and horizontally-scrolling stages. The former makes use of a pseudo-3D viewpoint combined with Mode 7 graphics to create an amazing scrolling landscape effect and the latter is packed full of moving scenery, barriers, and lots of crafty enemies that try to halt your advance in any way possible! Axelay hasn't aged at all and remains a superb and varied shmup that still commands a strong following today. Just one question... Why no sequel?

1. Super Aleste (1992)

Some may disagree with me but I still think this is one of the best vertical-scrollers of all time, and certainly the best shmup for the SNES generally, and the reason for this is simple - there's pretty much nothing about it that isn't awesome! The graphics may not be quite as flashy as some other shmups but they're still superb, detailed, and varied. The second stage in particular is noteworthy, featuring a distant enemy base that gradually gets closer and closer (using some splendid Mode 7, of course), all the while firing missiles at you from afar, until it finally gets close enough for you to shoot up! The sound is also fantastic too, with some great music, speech, and some very bassy explosions. There's also eight varied and customisable weapons which can all be powered-up, twelve long, well-designed stages, but best of all it has the most perfectly-pitched difficulty curve of any shmup I've played. A truly awesome shooter. watch a slideshow

More F-22A Raptors needed (2013-04-26 12:29)

The U.S. Air Force has concluded it needs more Lockheed Martin Corp (LMT.N) F-22 Raptor fighter jets than have been ordered so far, but fewer than it previously sought, the service's top uniformed officer said on Tuesday.

Gen. Norton Schwartz, Air Force chief of staff, said he would not dispute a characterization that over the coming three years the service was seeking to add 60 of the premier fighter jets to the 183 now on order, for a total of 243.

The revised request would be for a fleet totaling fewer than 381 Raptors, the previous Air Force goal, Schwartz told reporters, without disclosing the new number.

The Air Force once sought to buy as many as 750 F-22s, which it reckoned cost about \$142 million apiece in fiscal 2008, not including development costs.

The revised requirement is "driven by analysis as opposed to some other formulation," Schwartz said. "And I think it will withstand scrutiny."

The administration must make critical decisions about the F-22 by about March 1 or Lockheed Martin says it will start phasing out the production line, threatening tens of thousands of jobs during the current recession.

Schwartz said he expects to present the Air Force's new F-22 analysis to Secretary of Defense Robert Gates within a few weeks. He said the analysis did not factor in jobs, which he called the responsibility of other U.S. officials.

Pressed on why the Air Force was giving up on the 381 F-22s it had long stated it needed to make sure it could dominate the skies from Day One of any future major conflict, Schwartz spoke of going from a "low risk" to a "moderate risk" number.

"And there are few things in our armed forces that we have, you know, a low-risk posture, simply because of the overall demands across the force," he said.

Lockheed Martin, the Pentagon's No. 1 supplier by sales, said, "We're encouraged to read that based on an analysis of needs, the Air Force wants to purchase additional F-22s beyond the current 183..."

"We stand ready to work with the Air Force and (Department of Defense) ... whatever the final number is determined to be," said Sam Grizzle, a Lockheed spokesman.

He said some suppliers had already been notified that Lockheed would start shutdown activities on March 1 unless President Barack Obama "certifies that continued production of the F-22 is in the national interest."

To date, 135 Raptors have been delivered to the Air Force. Lockheed says more than 95,000 Americans owe their jobs to the F-22 program.

Gates and other Pentagon holdovers from the administration of the previous president, George W. Bush, have resisted buying more F-22s. Instead, they have favored the less costly F-35 Joint Strike Fighter being developed by Lockheed with eight foreign partners: Britain, Italy, the Netherlands, Turkey, Canada, Australia, Denmark and Norway.

Schwartz made clear the Air Force was prepared to sacrifice on other, unspecified weapons acquisition priorities in exchange for funding for more than 183 F-22s.

"Our basic approach is if we want something, we're going to pay for it," he said.

Schwartz showed scant interest in any effort to reverse a ban on F-22 exports mandated by Congress to keep its advanced radar-evasion and other capabilities in U.S. hands alone.

Referring to costs related to developing an export version, he said: "I don't see that as in the cards right now."

FreeBSD, best server OS (2013-04-27 12:35)

When talking about operating systems, there are a lot of points to debate about. The big deal used to be which one was more stable and which one supported the crazy file system configurations none of us normal people will ever use. Well, they are all fairly stable now (yes, even Windows) and honestly who is going to set up 10 machines with a distributed ReiserFS? People today seem to be obsessed with micro kernel details such as the process scheduler, something you may never understand and probably will never see a significant performance change from switching on. This leaves me with the real issues, such as:

1) Upgrades

How hard is it to upgrade software?

How seamless is it?

How much pain must you go through?

How much specialized knowledge is involved?

2) Software Compatibility

Does software compile/run easily for this platform?

Where do I get it?

Does it integrate easily?

Do I need specialized knowledge to do this?

3) Configurability

How hard is it to make the changes I want to?

How do I help myself learn the OS?

Is everything fairly standard?

Do I lose my changes when I upgrade?

Obviously

different distributions of Linux have different scripts and standard locations so it's slightly difficult to compare apples to apples here but I'll do my best basing my experience off of Slackware, Debian, Redhat, Gentoo, Mandrake and Ubuntu. I'd also like to note that Windows isn't included in this comparison simply because it follows a completely different paradigm. One of my serious server OS requirements is that the OS allows for extensibility, that is, adding functionality easily where it didn't previously exist, which, through Windows, is virtually impossible without purchasing additional software. UNIX-based operating systems are fundamentally extensible. I'll write another article on that later.

FreeBSD has a very standard directory structure:

/boot -> kernel and any other bootable files
/root -> The user, "root", home directory
/bin -> System binary executables runnable by root and normal users
/sbin -> System binary executables runnable only by root
/lib -> System shared library files
/var -> Logs, runtime process locks
/etc -> System configuration
/tmp -> Temporary files
/usr -> Userland files (non-system)

/usr/home -> Users' homes

/usr/lib /usr/bin /usr/sbin -> Same as previous except non-system

/usr/local -> Userland files specific to the local installation

/usr/local/lib /usr/local/bin /usr/local/etc -> Same as previous except for locally installed applications

Given this, I could tell you where any configuration file may be depending on if it's system-level (such as a boot-up sequence) or if it's an installed application (like apache). While Linux distributions also support this, they often times don't strictly adhere to it, as in, you will find many packages' binaries installed into /usr/bin where in FreeBSD they'd certainly be in /usr/local/bin. Linux also tends to put all configuration for almost everything in /etc. For this reason I feel that FreeBSD is more disciplined and easier to work with.

Here is the official FreeBSD directory structure description

Configuring and updating the operating system:

rc.conf.

/etc/rc.conf is the file read by all startup scripts to determine if they are allowed to start and if so, what the flags are for starting.

rc.conf is very human readable and you can easily turn on and configure any supported service in it. If you need to know what flags or options are available, you just look at /etc/defaults/rc.conf. I always find what I need for start up there.

FreeBSD can be fully updated and recompiled via CVS. There is a utility called CVSUP which allows for you to update just one part of the operating system or the entire system. I've known people to script a nightly update and build that downloads the latest source for their branch of FreeBSD, recompiles and reboots every single night.

Installing applications via the ports tree:

FreeBSD

pioneered the ports tree and it still works well. What is the ports tree? It's a collection of software sources configured and patched for FreeBSD. The way to install one is to go to the port and run "make install." It's very simple. It also installs all dependent applications as it goes. Gentoo had a similar system in which you could emerge ports. It was based on the same basic concept as this. Ports tree too old? Update it in one command with CVSUP (mentioned previously).

Other Technologies:

Linux

Compatibility: Yes, FreeBSD offers Linux Compatibility. You can natively run linux binaries with the support installed and enabled. I've done this to run versions of Java that aren't able to be compiled natively for BSD.

Networking & Files: FreeBSD's ipfw is a fantastic tool. I use it for all my packet queuing, firewalls, logging and any other network gateway-related activity. It can do almost anything. FreeBSD also features a journaled filesystem and some recovery tools which have saved me from devastating data loss in the past.

Summary:

I'm not going to get into all of the other reasons I prefer using UNIX, because there are too many, but specifically for FreeBSD, these small things add up to big savings in administration time and less headaches. I try not to get too focused on one specific technology when evaluating an operating system. I try more to look specifically at where the savings are for me. I simply want the operating system to support what I'm trying to do in the least amount of time feasible and I believe FreeBSD does that for me. If you're pragmatic and functional and are willing to learn a little UNIX, I highly recommend giving FreeBSD a try as your server operating system.

The Bush legacy (2013-04-27 14:59)

Clare Boothe Luce liked to say that "a great man is one sentence." Presidents, in particular. The most common "one sentence" for George W. Bush is: "He kept us safe."

Not quite right. With Bush's legacy being reassessed as his presidential library opens in Dallas, it's important to note that he did not just keep us safe. He created the entire anti-terror infrastructure that continues to keep us safe.

That homage was paid, wordlessly, by Barack Obama, who vilified Bush's anti-terror policies as a candidate, then continued them as president: indefinite detention, rendition, warrantless wiretaps, special forces and drone warfare, and, most notoriously, Guantanamo, which Obama so ostentatiously denounced — until he found it indispensable.

Quite a list. Which is why there was not one successful terror bombing on U.S. soil from 9/11 until last week. The Boston Marathon attack was an obvious security failure, but there is a difference between 3,000 dead and three. And on the other side of the ledger are the innumerable plots broken up since 9/11.

Moreover, Bush's achievement was not just infrastructure. It was war. The Afghan campaign overthrew the Taliban, decimated al-Qaeda and expelled it from its haven. Yet that success is today derogated with the cheap and lazy catchphrase — "He got us into two wars" — intended to spread to Afghanistan the opprobrium associated with Iraq.

As if Afghanistan was some unilateral Bush adventure foisted on the American people. As if Obama himself did not call it a "war of necessity" and Joe Biden, the most just war since World War II.

The dilemma in Afghanistan was what to do after the brilliant, nine-week victory. There was no good answer. Even with the benefit of seven years' grinding experience under his predecessor, Obama got it wrong. His Afghan "surge" cost hundreds of American lives without having changed the country's prospects.

It turned out to be a land too primitive to democratize, too fractured to unify. The final withdrawal will come after Obama's own six years of futility.

Iraq was, of course, far more problematic. Critics conveniently forget that the invasion had broad support from the public and Congress, including from those who became the highest-ranking foreign-policy figures in the Obama administration — Hillary Clinton, John Kerry, Chuck Hagel and Biden.

And they forget the context — crumbling sanctions that would, in short order, have restored Saddam Hussein to full economic and regional power, well positioning him, post-sanctions, to again threaten his neighbors and restart his WMD program.

Was the war worth it? Inconclusive wars never yield a good answer. Was Korea worth it? It ended with a restoration of the status quo ante. Now 60 years later, we face nuclear threats from the same regime that was not defeated in a war that cost 10 times as many American lives as Iraq.

The Iraq War had three parts. The initial toppling of the regime was a remarkable success — like Afghanistan, rapid and with relatively few U.S. casualties.

The occupation was a disaster, rooted in the fundamental contradiction between means and ends, between the "light footprint" chosen by Gen. George Casey and the grand reformation attempted by Paul Bremer, who tried to change everything down to the coinage.

Finally, the surge, a courageous Bush decision taken against near-universal opposition, that produced the greatest U.S. military turnaround since the Inchon landing. And inflicted the single most significant defeat for al-Qaeda (save Afghanistan) — a humiliating rout at the hands of Iraqi Sunnis fighting side-by-side with the American infidel.

As with Lincoln, it took Bush years of agonizing bloody stalemate before he finally found his general and his strategy. Yet, for all the terrible cost, Bush bequeathed to Obama a strategically won war. Obama had one task: Conclude a status-of-forces agreement and thus secure Iraq as a major regional ally. He failed utterly. Iraq today is more fragile, sectarian and Iranian-influenced than it was when Bush left office — and than it had to be.

Like Bush, Harry Truman left office widely scorned, largely because of the inconclusive war he left behind. In time, however, Korea came to be seen as but one battle in a much larger Cold War that Truman was instrumental in winning. He established the institutional and policy infrastructure (CIA, NATO, the Truman Doctrine, etc.) that made possible ultimate victory almost a half-century later. I suspect history will similarly see Bush as the man who, by trial and error but also with prescience and principle, established the structures that will take us through another long twilight struggle and enable us to prevail.

Soul Blazer, Herzog Zwei, and Thunderforce II (2013-04-28 23:58)

Although I bought Monster Hunter Ultimate two weeks ago, there is nothing out for Wii U. Been researching the SHMUP top ten lists again and found Herzong Zwei and Thunderforce II, both top SHMUPs on Sega Genesis. Herzog Zwei is a real time strategy game released in 1989. Thunder Force II is a launch SHMUP for Sega Genesis.

Soul Blazer is on the top 10 RPG SNES lists. It may be my last SNES game for a while. Those SNES games just double in price after a while. Last year mainstream SNES games were half as much! Someone tell the sellers that SNES shouldn't meet Neo Geo games in price. If all the thrift stores own Chrono Cross and Soul Blazer, then why is this a supply and demand issue.

Soul Blazer got an 8 out of 10 for RPG SNES. Thunderforce II got a 8 out of 10 in Genesis scores. Herzog Zwei got a 9 out of 10.

Homo-Europiens (2013-04-30 16:43)

The Last of the Homo-Europiens ;

Whites don't have any reason to feel guilt. It's a sentiment that has been cultivated by the status quo through their doctrine of political correctness, and it is leading to the genocide of the white race through interracial breeding.

As a white man, I'm extremely proud of our forefathers achievements, achievements which have been responsible for the development of mankind. Unfortunately, non white elements within our society have taken control of our developmental direction, and as such, we find ourselves in a precarious position today.

Whites don't owe the other races anything. On the contrary, they owe us a debt of gratitude for dragging them kicking and screaming out of the dark ages.

As a white man who believes it is genocidal to support interracial relationships, I will oppose the general acceptance of this practice even if it means I am labeled a racist.

There is a theory put forward a few years ago in AD 9540 , that the earlier native white Europeans were wiped out in Europe , North America and Australasia and became extinct very suddenly between AD 1950 and AD 2200 over a comparatively short period of time by a calamitous combination of several simultaneous converging factors .

1)A mysterious sudden massive sudden drop in the reproductive rate to below replacement level , which appears to have created up side down 16-8-4-2-o family trees .

2) This would lead to an unavoidable and irreversible progressive economic / industrial/ technological/ military/domino collapse .

3) This seems to have coincided with a massive unregulated nomadic migration of Homo Asiaticus , Homo- Africanus , Homo-Hispanicus , and Homo-Arabicus from the south and east in search of more fertile and game rich northern environments with a more benign economic climate .

Evidence shows the newcomers had a far higher reproductive rate .

Although earlier experts have always put forward the theory that Homo Europien must have been overwhelmed by a far more technologically advanced influx of humans with a higher I.Q. , new evidence has come to light which shows that the very opposite may have been the case , which has stirred up a great deal of controversy and ridicule in scientific circles

.

The new theory is ;

" that they were simply victims of their own success "

The discovery of many bone fragments with evidence of multiple skull fracture and all from different locations indicates that the final demise of Homo Europien was a very violent affair .

Other theories point to an unusual genetic susceptibility as indicated by DNA samples to a form of neurological virus which may have infected those areas of the brain which regulate the hard-wired natural survival instincts which humans use to form a sense of tribal identity , extended family , and normal precautionary fear of strangers reflex which exists in all present day modern humans.

This would have put Homo-Europien at a evolutionary dead-end .

It maybe that this lead to Homo-Europiens inability to recognise the appearance of a new species competing for the same resources when confronted with one .

A surprising number of complete skeletons have been recovered showing fatal injuries and the jaw bones frozen in a permanent

rigor-mortis grin , which would mean that on many occasions

Homo-Europien may have been smiling ironically as he was beaten to death .

Little Ice Age II (2013-05-01 15:32)

Bought Axelay, Gaiares (2013-05-03 23:56)

have seen some Youtube videos of Axeley, one of the top SNES shmups. The Mode 7 looks really nice. I also got Gairares for Sega Genesis. Both fine shmups. Axelay looks like Radiant Silvergun for Saturn! The arcade was released 2 years after. Axeley was not expensive at \$35! It comes with 7 levels. Axelay is pretty hard. Gairares is a hardcore shmup that is in the top six Genesis shmups after Twinkle Tale, Eliminate Down, Lighening Force, and MUSHA and Thunderforce III. It's really cheap, that's why I picked it. I played these two games in an emulator on PC about seven years ago.

Bought Star Trek Deep Space 9 (2013-05-04 13:05)

Today, I got Star Trek Deep Space 9. I only watched it a little, but not as much as Star Trek The Next Generation or Voyager. I saw this series when it first aired and I have seen it in syndication many times since. I even watch it now on the Spike channel. It is by far one of my favorite Star Trek's or any TV series for that matter. The last few seasons were especially exciting. It is amazing how you watch the characters grow over the years. I can't say enough positive things about this series. Sisko, Nerys, Odo, Jadzia, Worf, Quark, Bashir, and Garak added wonderful characters that really made a difference to me. The guest stars were great too. The directing, cast, stories, sets, music, and the rest the production are first class all the way. If you are a fan of SciFi and not buying a number of other TV series, buy this set.

Now that said, I would like to say Paramount needs to be slapped up side the head for being so greedy, and that is saying it nicely. I can buy a season of ANY other Non-Paramount series for half or less the price. Why are you making us fans of Star Trek suffer? Do you think, oh they are Star Trek fans, they will pay anything? Give us some credit. I am not buying this series unless you lower the price. I bought all the original Star Trek series and even three seasons of Next Generation. But after spending over \$650 for six seasons I realized this is absurd. I bought six seasons of Stargate SG-1, a great series, for under \$300 with tax. Here's a concept Paramount, sell it reasonable so you will make more sales and your customers will appreciate you.

I decided to go ahead and get this set since they at least give a break for buying all seven seasons together. Do not use Amazon overnight or two day shipping unless you are home all day. I paid for two day shipping but I didn't know Amazon would insist the package be signed for in person. UPS took four days to finally bring it by when I was home after work after they said they couldn't except a signed receipt and I then told them to come after 5 PM.

This set is FANTASTIC. Even better than I remembered. For some odd reason my wife and I thought the first couple seasons weren't all that good. Now that we are watching them again, we are very impressed with all the episodes. The only thing I can figure is at the time they were originally shown we were more interested in TNG since they were exploring space and we thought a space station was not as interesting. Seeing them now I realize that was just not true and we did it an injustice thinking that way.

Ten Favorite Episodes

- 1.Duet (first season)
- 2.The Way Of The Warrior (fourth season)
- 3.In The Pale Moonlight (Sixth Season)
- 4.The Visitor (Fourth Season)
- 5.The Seige at AR-558 (Seventh Season)
- 6.Trials and Tribble-ations (fifth season)
7. ...You Are Cordially Invited(sixth season)
- 8.Looking For Par'Mach In All The Wrong Places (fith season)
- 9.Take Me Out To The Holosuite (seventh season)
- 10.Far Beyond The Stars (sixth season)

Jiggimi openBSD review (2013-05-06 16:20)

I found an openBSD 5.0 Distro called Jiggimi loaded with Gnome 2.32, KDE 4.7, LXDE 0.5.6 and XFCE 4.6 that can be installed to a UFS partition. openBSD is supposed to be the most secure OS out there. You get Gnome 2.32, Firefox, libreoffice with the Gnome distro. Usually openBSD doesn't come with a nice GUI unlike Jiggimi.

PC-BSD 9.1 Isotope Edition (2013-05-11 16:54)

I would like to begin the new year by talking about a project which I had the chance to play with in the final weeks of 2012. This project is PC-BSD, an effort sponsored by iXsystems which places a polished desktop layer on top of the FreeBSD operating system. Though at first glance it might appear as though PC-BSD 9.1 is a simple point release over last year's 9.0 release, the project's blog paints a very different picture. Some of the key features to PC-BSD's 9.1 release include the introduction of TrueOS, a server edition of PC-BSD. Basically, TrueOS is FreeBSD with a nice graphical installer, PBI tools and various modern conveniences which we will get to later. The new release of PC-BSD includes support for ZFS pools that include swap space, this allows users to create installs that are exclusively ZFS based and we will also touch on the benefits of this later.

PC-BSD 9.1 expands on its Warden feature. The Warden is a graphical (and command line) solution for managing FreeBSD jails. This release of PC-BSD adds a feature which will let the Warden create a variety of useful jails, including Linux jails. Also in this version we find the EasyPBI utility, a graphical program which makes it easy to create PBI modules from the FreeBSD ports tree. This lowers the bar for contributing new software to PC-BSD's PBI collection. This version introduces boot environment administration (beadm), a feature which allows administrators to create snapshots of their operating system prior to applying upgrades and allows the admin to then roll back to previous OS versions if something breaks. We also see improved wireless support in this release and updates to various features and to the documentation.

Installation and first impressions

The current version of PC-BSD comes in a number of different builds. There is a large installation DVD (3.5 GB), a large USB install option (3.4 GB), a live USB image (1 GB to download, 4 GB once expanded), a light USB image (1 GB) and there are VirtualBox and VMware images. Each download option is offered in 32-bit and 64-bit builds. The live CD option from previous releases has been removed in favour of the larger live USB option. I decided to download the 32-bit build of the DVD edition.

(full image size: 193kB, screen resolution 1024x768 pixels)

Booting from the DVD brings up a graphical environment and automatically launches the PC-BSD graphical installer. The first thing the installer asks for is our preferred language. We can then choose what sort of installation we would like to perform and there are quite a few options. The default choice in my case was to install PC-BSD with KDE. Other options included the PC-BSD base with our choice of GNOME, Xfce or LXDE. There is another option called TrueOS which is essentially FreeBSD with the addition of some nice command line tools developed by the PC-BSD team. There is also an option to install plain FreeBSD, useful for people who want to try FreeBSD, but who wish the convenience of a graphical installer.

What I like about this selection screen is each bundle comes with a description explaining why we might want to go with that option. For instance, we're told KDE is full featured and will require more RAM. The LXDE environment is recommended for lower end machines such as netbooks. Opting to take one default bundle over another is not an exclusive choice. There is a "Customize" button on the page which allows us to declare which packages and graphical environments we want. We can use this easy to navigate tree of software to add or remove specific parts of an environment, for example I can remove the Games section of KDE. We can also add additional drivers, development tools and (officially) unsupported graphical environments such as IceWM, Openbox and Enlightenment.

The next screen of the installer covers disk partitioning. By default I found the installer would try to take over available free space on the drive and it suggested reasonable partition layouts. On lower end machines the installer will recommend we use UFS for our file system and, on machines with more RAM, the installer recommends ZFS. Should we wish to customize our partition layout we can take one of three options: beginner, intermediate or advanced. The beginner option is very simple, the installer just asks which disk partition we want to use and whether our data should be encrypted. The middle option lets us set more options including whether to use UFS or ZFS, disk encryption and RAID options. The advanced partitioning option will let us dig around the system using FreeBSD's command line partitioning utilities. I decided to go with the defaults and set up a plain ZFS-based system without encryption.

At this point we are pretty much done for a while and we can sit back, watching the progress bars as the installer copies its files to the hard drive. Something I'd like to add here is that each screen of the installer has four buttons along the bottom. One of these brings up a window which shows which hardware devices PC-BSD is able to recognize and which devices it cannot match with drivers. This allows us to check our hardware compatibility before we commit to an install. Another button brings up an on-screen keyboard and the third brings up an option to change our default keyboard map. The forth button will provide documentation for the current screen of the installer. The documentation provides helpful hints as to how to get through each step. I suspect most people won't need the documentation as many people can get through the installer by just clicking the "Next" button a few times. The "Customize" button for advanced options is on each screen, but we can ignore it and just sail through with the defaults if we like.

Once the installer finishes copying files to the hard drive we reboot the machine and are brought to another graphical screen where we are asked some configuration questions. First we are asked to test and confirm our display settings, then a quick full screen video plays letting us know whether the video and sound settings work. We're asked to confirm the system is using the correct language and then we can confirm our time zone. The last two steps in the process are setting a root password and creating a regular user account. From there we are brought to a graphical login screen.

The first time we login to PC-BSD a welcome wizard pops up and shows us how to get on-line (if we are not already) and how to find the package manager and Control Panel. The welcome wizard also provides tips for setting up backup jobs, acquiring software updates and where we can get further help. Specifically, the welcome screen mentions the PC-BSD website, Wiki and community forum as places where we can get assistance. Once we dismiss the welcome screen we find ourselves presented with a traditional desktop layout with an application menu in the lower-left corner of the screen and icons on the desktop. These icons can be used to launch PC-BSD's package manager (called App-Cafe), open the Control Panel or open a PDF version of the project's Handbook. I feel the Handbook deserves special mention. It contains over 300 pages of detailed information on how to use PC-BSD and it features numerous screen shots, step-by-step instructions and, perhaps most importantly, a table of contents. I found it a very useful resource. During my trial with PC-BSD I tended to swap between two desktop environments, namely KDE and LXDE. I hoped this would give me a general feel for what the two environments had in common and what would be presented differently. While both desktops have their unique styles, I found the overall presentation is pretty much the same. Both

environments present us with convenient desktop icons, both place the application menu and task switcher at the bottom of the screen and both have similar themes and wallpaper. The KDE environment is heavier and a bit slower, at least with the default settings. I found once desktop file indexing was turned off, KDE responded smoothly. The LXDE desktop is quite light and very responsive. Since each desktop environment comes with its own bundle of applications and since the user can customize their software selection during the install process, there doesn't seem to be any reason to talk about the many possible combinations of default software. Instead I would like to cover the utilities which exist commonly across environments. What is it that comes with PC-BSD, regardless of our graphical environment?

Software selection

The first piece of software I'd like to look at is Life Preserver, the PC-BSD backup utility. This program sits idle in the system tray. Clicking on its icon brings up a graphical wizard which walks us through providing a hostname, username and password for another computer. I suppose it could be a machine anywhere on the Internet, but I chose to use a machine on my local area network. We can specify any remote machine so long as it runs an OpenSSH server and we have an account on that machine. Once we have filled in all the fields Life Preserver synchronizes our home directory with a folder on the remote machine. Should we wish to we can specify how often our local files are copied to the remote computer and we can tell Life Preserver how many of these snapshots to keep on the remote machine.

What I really like about Life Preserver's approach is it will perform its backups on a set schedule and automatically clean out older backups once it has hit its maximum number of snapshots. All of these snapshots are stored on the remote machine in a folder called "life-preserver", separating our backup data from the rest of our account on the remote machine. It's really quite straight forward and we can click on the Life Preserver icon at any time to discover when the last backup ran and whether it completed successfully. The only concern I had with using this tool arose when it came time to restore files. If we use the Life Preserver GUI we need to be able to provide the exact path name of the file to be restored. Alternatively we can login to the remote machine using any OpenSSH client, such as Filezilla, to browse for and restore our file if we do not know the file's full path name.

Package management is handled by a program called AppCafe. This application provides users with a web-like interface for browsing through applications. We can locate software either by browsing through categories of packages or by searching for software by name. Clicking on a package brings up a screen with the software's name, license, size and a brief description. We can queue a package for installation by pressing a button. Once we have selected a package to install AppCafe begins downloading the software in the background while we continue to use the package manager. AppCafe organizes software a little differently than most Linux package managers.

Where on Linux we typically use filters to see what software is installed, what is available and what can be upgraded, AppCafe is effectively split into two parts or tabs. The first tab lets us find and install software. The second tab displays software which has already been installed and, next to each package, is a status indicator letting us know if the package can be upgraded. I found this separation of packages in the repositories vs. software on the local machine to be fairly intuitive. One feature I especially like is once a package has been installed we can opt to set that package to automatically update in the future. For instance, if we always want to have the latest version of Firefox, but we want to manually update all other packages, it is possible to set Firefox to update on its own whenever a newer version enters the repository.

Speaking of updates, whenever the system detects newer versions of software in the repositories, an icon in our system tray lets us know updates are waiting. Clicking on the notification icon opens the AppCafe and displays the packages currently installed, with notices next to the packages we can upgrade. Here we can choose to update any (or all) available packages. One feature I was happy to see included in this release of PC-BSD is delta updates. The PBI packages PC-BSD uses tend to be larger than their Linux counterparts and having delta updates greatly reduces the amount of bandwidth required to install new versions. For instance, installing Firefox the first time required a download of approximately 100MB, however the following update for Firefox took a mere 2 MB.

Software management and system configuration

Software management on PC-BSD is a bit different than on most other operating systems so I'd like to talk a bit about what goes on behind the scenes. There are, in effect, three categories of software PC-BSD users can access. The first group is system software, those are packages which are part of the base FreeBSD operating system or which PC-BSD comes with out of the box. This collection of software is generally handled for us behind the scenes and requires little to no effort on our part. The second group is made up of PBI packages which are handled by AppCafe. We just talked about how to access these. A PBI package is special in that it carries its dependencies with it. This allows us to run multiple versions of software and install third-party software without concern for missing dependencies or running into conflicts where package A needs one version of a library, but package B needs another version. These built in dependencies make PBI packages bigger, but it also means they are fairly atomic. The third collection of software available to us is the FreeBSD Ports Collection. This optional group of software can be added to PC-BSD using the FreeBSD package handling tools and may be convenient for users seeking greater flexibility or special configurations. The Control Panel deserves a quick mention. Regardless of which desktop environment we install, the PC-BSD control centre is always available to us. This control centre looks quite a bit like KDE's System Settings panel and, in some ways, there is a functionality overlap. The PC-BSD Control Panel gives us the ability to configure most aspects of the operating system. From this panel we can launch the AppCafe, manage the firewall, adjust the display settings, create new PBI packages, launch the Warden (more on the Warden in a moment), change Adobe Flash settings and get information on the system's hardware. In addition we can gain access to the Life Preserver backup tool, set up printers and scanners, and set default applications. I like this unified approach which works across desktops as it makes getting help on forums and through the documentation more straight forward.

One more feature I want to touch on as I feel it brings a lot of convenience to PC-BSD users is the Warden. On FreeBSD (and derived systems) system administrators can make use of jails, a sort of virtual environment roped off from the rest of the operating system. While jails have always been powerful, they have also been a bit cumbersome to use. The Warden is a management system for jails and it makes creating and manipulating jails a simple experience. The Warden has two interfaces, the command line for server systems and a graphical interface which can be accessed through the PC-BSD Control Panel. There are three types of jails the Warden can manage, traditional jails for system and network services, ports jails which allows us to install third-party software safely while still giving those installed packages access to the desktop environment and, finally, Linux jails.

Using the Warden we can create a jail which will bootstrap either a Gentoo or a Debian environment, handy if we want to run software that has been ported to Linux, but not to BSD. I tried setting up a Debian jail and found the required packages downloaded and installed in about ten minutes, making the jail set up faster than if I had downloaded and installed Debian GNU/Linux myself. Aside from the security and convenience of being able to run these isolated systems, the Warden will allow administrators running ZFS to make regular snapshots of jails. Let's say we installed Debian and added a LAMP service. We could take a snapshot of this jail as soon as the set up was completed and create regular snapshots in the future. This would let us roll back to a previous point in time that was known to be good in the event of the jail becoming corrupted or infected. All of this is handled by a very simple graphical interface where creating or destroying a jail happens with a few mouse clicks.

Hardware support

I tried out PC-BSD on two physical machines, my desktop and a laptop, as well as in a VirtualBox virtual machine. Things went pretty well on the laptop (dual-core 2 GHz CPU, 4 GB of RAM, Intel video card, Intel wireless card). My display was set up properly and audio worked out of the box. I did have a few moments of trial and error getting my wireless card working, but it eventually all came together. I had slightly less luck with my desktop box (dual-core 2.8 GHz CPU, 6 GB of RAM, Radeon video card and Realtek network card). Again, sound worked and I had no trouble getting on-line, but PC-BSD had trouble working with my Radeon card. I found the only way I could get the operating system to boot was to force the system to use the fallback VESA graphics driver. This worked fairly well, but it meant I could not make use of my screen's maximum resolution and video performance was a bit lacking.

When running in the virtual environment PC-BSD worked quite well. I did find that, again, video resolution wasn't optimal, but otherwise I encountered no problems. Memory wise I found PC-BSD to be a touch heavier than its Linux counterparts. When I was running KDE the system's active memory usage was approximately 330MB and when running the lighter LXDE interface the operating system used about 200MB of memory. The boot times I experienced with PC-BSD were noticeably slower than with most Linux distributions, but the performance once the system completed booting was very good. The desktop environments were always responsive and tasks completed quickly even when I was juggling several items at once.

Conclusions

After a couple of weeks of running PC-BSD I have to say I am impressed. In part because of the number of new features the developers have managed to stuff into this point release, but mostly because these features are so polished. People in the BSD community tend to emphasize the point that FreeBSD is a complete operating system, developed in unity, whereas Linux distributions are better described as a collection of separate parts assembled by the distributor. I believe we are seeing the benefit of centralized development in PC-BSD. Most of the tools, the package manager, the Warden, the ZFS support, the backup solutions, etc, all of these are put together by a unified team for a single platform. This gives the developers a chance at making a smooth, integrated experience. It's nice to be able to read the documentation and know that the instructions for adjusting a setting are the same for a person running KDE as they are for a person running LXDE. Having recently spent time reviewing Linux Mint, where there are multiple spins based on multiple bases it is nice to know that if I ask for help on the PC-BSD forum I don't first have to specify which platform and spin I'm using, with PC-BSD the base is always FreeBSD and the controls are all the same across spins. Another important aspect of PC-BSD which stood out was the way it makes many administrative tasks simple and streamlined. Backups are a prime example. To set up a regularly scheduled backup of my account took all of about ten seconds, accomplished simply by providing the hostname and login credentials of another computer to which I had access. From there PC-BSD will continue to perform regular backups and rotate out stale backups from the remote machine. Package management is likewise straight forward, allowing users to find and install software with just a few clicks and software queued for installation gets processed in the background, out of the way. Having ZFS as an integrated file system option is a nice addition. In the past PC-BSD could use ZFS, but it wasn't as smooth an experience as setting up UFS partitions. Now creating ZFS pools is almost entirely automated and users will be able to quickly set up regular snapshots of the entire file system quite easily. Having ZFS as a front-and-centre option also means users will be able to quickly add new storage space to their operating systems simply by plugging in a new hard drive and adding the device to their existing ZFS pool. There are nice little touches with boot environment administration too. For example, if we create a boot snapshot, perform an upgrade and then, a week later, decide we want to roll back to a previous snapshot, beadm will let us to that. The beadm tool also knows not to roll back our data files or settings to last week's state, the rollback only affects the operating system itself.

Lastly, I want to touch on the Warden. Being able to set up FreeBSD jails with just a few clicks and make regular snapshots of them via an elegant GUI is a really great feature. It makes managing and migrating FreeBSD jails straight forward. I particularly love that I could get a Debian jail up and running in about the same amount of time as it would take to download the Debian net-install ISO. This is a welcome feature and I suspect it will be especially useful for cross-platform development.

Nothing is perfect and PC-BSD does have an Achilles' heel, specifically hardware compatibility. As much as I enjoyed the polish and the features and the wonderful ease of use, I suspect hardware support will be the make or break issue for most people. On my desktop machine I could get PC-BSD working, but only with reduced resolution and video performance. On my laptop things basically worked well, but it took a little tinkering to get my wireless card up and running. When running the operating system in a virtual machine I installed the VirtualBox guest additions, but couldn't get PC-BSD to display its desktop at full resolution. Luckily hardware support with PC-BSD is not a trial and error process, the hardware compatibility tool takes the surprises out of testing the distribution, even when running from the plain installation media.

I definitely recommend trying PC-BSD. This new release has really taken a step forward in usability and features compared to where the project was even a year ago. I would say 9.1 brings to the table a level of ease of use and trouble-free administration only found in a few of the top ranking Linux distributions. It is well worth the time to test drive this latest release.

National Republican Congressional Committee letter (2013-05-16 08:11)

Page Two

And his second term agenda looks a lot like his first one: higher taxes, more spending, bigger debt, fewer jobs, less freedom for you and your family -- and a redistribution of wealth that pits one group against another.

That's why he transformed his re-election campaign into a new social welfare organization that can take unlimited contributions from the big labor unions, environmental extremists, the ultra-wealthy liberal elites and the Hollywood crowd.

President Obama hasn't given up on his goal to fundamentally transform America into a carbon copy of the failed European socialist state. And you can be sure the crowd that funded his billion dollar re-election campaign are ready to keep the money pouring in.

But the NRCC is not playing defense. We're staying on offense just as we did last year when we helped win a second straight GOP House Majority -- a victory you made possible through your loyal support.

Right now, my projections show that we can make up our \$742,500 budget shortfall and keep our programs fully funded if we have the maximum support from key leaders like you.

Remember: The NRCC is the only organization in the country solely dedicated to re-electing our Republican House Majority. That's why your additional contribution of \$50, \$75 or even \$100 is so urgently needed.

Without your help, Ian, we will fall dangerously behind and won't be able to respond to all the negative attacks coming from the White House and the Democratic Party.

So please. Rush your Member Statement back to the NRCC along with the most generous gift you can make.

The Democrats and their left-wing allies -- especially those in the mainstream media -- are determined to retake Washington so they can resume their budget busting, big government agenda.

We cannot delay our critical programs for one day. Please help today.

Sincerely,

Keith Davis
NRCC Treasurer

P.S. The Democrats only need to gain 17 seats to take back the House majority, install Nancy Pelosi as Speaker again -- and give President Obama a rubber stamp for his left wing agenda. We cannot let that happen. Your immediate contribution is urgently needed so we can close our budget shortfall and stay on track to build the most aggressive campaign ever. A postage-paid courtesy return envelope is enclosed for your convenience -- or go to nrcc.org/track to make your gift on-line. Thank you for your loyal support.

PS2 SHMUPS (2013-05-16 14:16)

DoDonPachi Dai-Ou-Jou

(JP, DVD) The third (or fourth, if you count the outside-developed Bee Storm) entry in Cave's marquee "DonPachi" series, Dai-Ou-Jou (roughly "peaceful death") abandons the relatively accessible style of its forebears; this sucker is among the company's most challenging offerings, if not one of the toughest shmups ever, period. The traditional trio of selectable craft is replaced by a Progear-esque lineup of two planes and three stat-altering cyber-loli "co-pilots", but shooting, lasering, bombing, and chaining are much as you remember them, with one major addition: the "Hyper". As you rack up sequential kills and collect hidden bee medals (which now must be snatched mid-chain for worthwhile rewards), a "hyper meter" fills up, and once topped out a "Hyper" item will appear; up to five can be stocked. The next time you push the "bomb" button, all stored "Hypers" will be spent at once to boost your weapon power (and the resulting hit count) to ridiculous levels; careful though, as frequent hyper use makes enemies even angrier at you.

There are only five stages to traverse (if you don't count the super-difficult second loop), but they're more than nasty enough to keep even the best players busy: the onslaught of big flashy baddie bullets is unrelenting, and you'll be amazed at the effort it takes to weave your pint-sized hitbox out of so much trouble. And that's just when playing to survive: if you thought putting together high scores in the first two DonPachis was difficult, be prepared to train like a Shaolin monk before so much as glimpsing a respectable point total here. Thanks to Hypers it's now possible to extend chains much longer than before, but success on this front still demands split-second timing and incredibly precise movements; if you DO somehow manage to tame this monster, the blazing flames engulfing your formerly-fierce adversaries seem to shine brighter than ever.

It's a perilous journey no matter how you play, but at least you don't have to worry about the technical end giving you any problems. While Arika, the company behind this port, is probably best-known for the less-than-stellar Street Fighter EX series, they definitely hit a home run here. The gloomy, post-apocalyptic atmosphere (which, to be fair, might not appeal to those who like a bit more color), slowdown level, and almost everything else are very faithful to the arcade original; they're accompanied by some nifty extras too, most notably a cracked-out boss rush mode aptly titled "Death Label" (not to be confused with the game's "Black Label" arcade revision, later ported to the 360). You also get a wide array of display options, an image gallery, optional arranged music, a full-featured "simulation" mode (including a "no-bullet" mode ideal for chaining practice), replay saving, and a viewable superplay on the game disc; more is available on the second "Special DVD" that comes packed in. If the admittedly harrowing challenge doesn't put you off, consider this one of the PS2's essential shmup imports.

(JP, DVD) On the other hand, if you like Cave's style but Dai-Ou-Jou sounds like too tall an order, ESPGaluda ought to be right up your alley: though its name is reminiscent of 1998 arcade exclusive ESP Ra.de, it has little in common with that game, save the fact that you still control a flying person instead of an aircraft. You've also got the expected shot/laser/bomb setup going, but now all killed enemies leave behind green gems: these shiny stones aren't worth much in terms of points, so what's their purpose? Glad you asked: they fuel the game's primary gimmick, "kakusei (awakening) mode", which is basically Matrix-style "bullet time". Hit the "B" button to switch into kakusei, and everything onscreen except your character slows down drastically, making your life a lot easier: the catch is that you need gems to use it, and being in this state constantly drains your supply. Watch out if your reserves run completely dry before you swap back into "normal" mode – enemy bullets become faster, and tougher to dodge.

"Kakusei", as it turns out, is also the key to scoring – whenever you dispatch a slowed-down adversary, all of its onscreen bullets are transformed into shiny gold pieces, your main source of points. Moreover, the greater the amount of gold you can pile up in one "shift" before switching back to "normal" mode, the more each piece is worth, so to hit the jackpot you'll want to look for spots where you can either stay in Kakusei awhile or cancel a big pattern all at once (or both) to rake in maximum profits. The beauty of ESPGaluda's system lies in the fact that almost any player type can tailor it to his own needs: less-experienced shmuppers can save up gems for rough spots where the reduced bullet speed can help them pull through, while seasoned shooter fans can blow it all on mining that sparkly gold. On that note, Galuda's inherent difficulty level lies on the lower end of the scale (for Cave, anyway), but the presence of even more advanced scoring techniques (check an FAQ for further details) gives just about every shmupper something to love.

Arika handled this port as well, and did at least as good a job as on Dai-Ou-Jou: the standard Arcade mode is again just about perfect, and accompanied by the same gallery, practice, and replay options as their previous effort (plus another supplementary DVD). The biggest bonus here, though, is a full-fledged "Arrange" mode, featuring meaner baddies and two exclusive playable characters. The level layouts haven't changed, but these new recruits have access to both kakusei mode and the secondary "piercing shot" from Ra.de, which multiplies the value of enemy kills when used correctly; combine the two and some truly insane scoring possibilities open up (if you can juggle all the required buttons with enough skill). It's unfortunate that neither this nor Dai-Ou-Jou ever saw release outside of Japan, but trust me: if you're a shmup fan you definitely have to try them.

(JP/US/PAL, CD) It took the combined efforts of Konami, Treasure and G. Rev to make it happen, but lo and behold, the fifth “numbered” Gradius game: like its immediate series predecessor the graphics are polygonal, but the action remains classically two-dimensional. Players again have four (slightly-)varying weapon setups to choose from, but thanks to the new “Option Type” affixed to each one this decision is more important than ever – depending on the “type” you choose, your “option” helpers will do different things when you hold down the R button, such as freezing in place, spreading out/clustering together, or rotating around your ship. These handy abilities drastically alter how the game is played: each comes with distinct advantages and disadvantages, but no matter which you pick you’ll need to make good use of it to survive. This, however, is not the biggest change in store for longtime fans: Treasure’s influence on the formula is strongly felt, and not just in the big, beautiful explosions. Gradius V plays more like a “bullet hell” shmup than any of its forebears: enemy shots and other obstacles frequently clog up most of the screen, forcing players to rely on precise maneuvering and a newly-tiny hit area to stay in one piece.

Once you’ve adjusted to these anomalies, things start to look more familiar: the standard power-up bar, “core” bosses, and lack of any real scoring system are all accounted for, not to mention that you’ll still occasionally get swatted by a hard-to-see gray bullet or an unannounced enemy approaching from the rear, so this is definitely still a Gradius game. It is fair to state, though, that it’s a different breed of Gradius than any other, and while many fans won’t mind the shakeup others might prefer to stick to the classics (if only for the ambience; the scenery here is decidedly less varied than its predecessors’). If you do decide to take the plunge into this flashy new brand of Bacterion extermination the game isn’t hard to find, but it IS hard to beat (and as if finishing one run isn’t tough enough, infinite loops await those stubborn enough to get to them). Hanging in there will eventually unlock some extra “custom” weapon configurations, a la Gradius III, while similar doggedness on the secondhand market might net you the “History of Vic Viper” booklet or “Options” DVD included with first-print Japanese (and Asian) editions. If you really want to round out the collection you can also seek the Konamistyle-exclusive “Perfect” superplay DVD or the USA preorder “Breakdown” DVD...the “Director’s Cut” edition or other super-rare prizes awarded to winners of the official Western scoring competition, however, are likely beyond your grasp, so for your sanity’s sake you might just want to enjoy the game instead.

Shikigami no Shiro (Series)

(JP/US/PAL, CD) Alfa System, a small developer comprised largely of ex-Taito

employees, has been an esoteric industry presence for a number of years, but shmuppers know them best for their Shikigami no Shiro shooters (a “shikigami” is a sort of helper spirit, while “shiro” means, among other things, “castle”), two of which made appearances on the PS2. The first game lays out the basic premise: you take control of one of several super-powered human characters in an effort to exorcize the creepy monsters appearing all over Tokyo. Tapping the fire button activates your “normal” weapon, but holding it down unleashes a more specialized “shikigami” attack, and focuses your movement speed: defeated enemies drop coins, which boost both your offensive abilities and your score. Finishing baddies off with your shikigami auto-collects the resulting loot, so you’ll want to utilize the former as much as possible.

Things get far more interesting, though, once you factor in the series’ main claim to fame, the “Tension” system: the closer you are to enemies or their projectiles at any given time, 1) the stronger your “normal” shot gets, 2) The more coins enemies leave behind, and 3) The more points you earn for both kills and coinage (up to 8 times base value). For optimal results you’ll want to bring down as many targets as possible with your secondary weapon, deliberately cheating death while doing so: of course, this is much easier said than done, and you’ll likely need to unload a bomb or two to get out of tight spots (use them sparingly, though, as these do NOT restock after dying). On the periphery players can access a practice mode, boss rush, image gallery and story recap, as well as a healthy selection of gameplay options: thankfully, all of these extras were carried over into the sequel.

The first Shikigami no Shiro is built around an intriguing concept (and features a cameo character from gun shooter Elemental Gearbolt), but its mixture of 2-D sprites and 3-D backgrounds is somewhat unsightly, and being powered down upon death serves to compound players’ frustrations, since this makes it increasingly difficult to earn coins and power back up. Moreover, while the game received both a limited edition (which included a figure of one of the characters) and a reprint in Japan, US and PAL gamers had to make do with the dreadful localization “Mobile Light Force 2”, which saw fit to ditch all of the story segments and many of the options, replacing them with abysmally bad redubbed voices and utterly nonsensical cover art: it’s cheap to buy, but still not recommended.

Thankfully, Shikigami no Shiro II improves things on almost every front: the graphical style is more unified (though still nothing too impressive overall), new “Easy” and “Extreme” modes and an arranged OST have been added, the playable cast is larger, everyone’s attack options have been expanded, and you no longer need to worry about being gimped offensively after messing up. Again, Japanese shmuppers got an LE (with a different model figure) and a reprint, but the rest of us didn’t make out too badly this time either: the localized edition, simply dubbed “Castle Shikigami 2” (the PAL version tacks on a weird “War of the Worlds” subtitle), leaves all of the most important original features intact, though the text translations and dubbed voices are still laughable. It’s a bit more slowdown-laden (if you don’t turn “wait” off) than ports to other systems and lacks a few of their extras, but is also much less pricey: if the risk/reward contrast of the “tension” system sounds appealing to you, by all means spend a few measly bucks to pick this up.

As a final note, there is a third Shikigami no Shiro game on the PS2, subtitled “Nanayozuki Gensoukyoku” (“Fantasy of the Seven-Moon Night”), but it is an offshoot, not a “true” Shikigami title: most of its content is in the “visual novel” style, with only a handful of pared-down shmup segments sprinkled throughout.

(JP/PAL *, CD) The Psyvariar series, which comes to you courtesy of Korean developer Skonect, centers around the so-called “buzz” mechanic, which is similar in spirit to Shikigami no Shiro’s “tension”. As you both shoot down baddies and closely “graze” them and their bullets, not only does your score increase, but a “level” bar at the top of the screen gradually builds – upon reaching maximum capacity you’ll “level up” and get a moment or two of invincibility, during which you can bullet-scratch with impunity and ram baddies for damage. Level up enough times and your craft will change form, gaining extra firepower as well as access to tougher (and more lucrative) branching stage paths in the process – you can also make the ship “roll” by rapidly moving the joystick back and forth, which alters its movement speed, focuses its shot, and widens its “buzzing” range. Individual areas are short in length, but boss battles are the real highlight: you can shoot (or smart bomb) them into submission if you want, but to fully exploit these harrowing encounters you’ll want to let them live (and “buzz” as many of their bullet-rich patterns as you can) until they self-destruct instead.

The first Psyvariar, subtitled “Medium Unit”, pioneered the features detailed above, but a closely-following update, “Psyvariar Revision”, puts a slightly different spin on the action: not only have the visuals and overall layout been remixed, but while Medium Unit only allowed you to “buzz” each onscreen bullet once, in Revision you can linger around and leech off of shots infinitely as long as they’re visible, fueling your “level-up” meter to the point where you can (and should) “chain” invincibility bursts together at length in quite a few places. Players can also opt to use “small” bombs instead of screen-filling ones if they want to slip out of a jam without eliminating enemies or their buzz-able attacks. “Medium Unit” and “Revision” were originally ported to the PS2 together, as “Psyvariar Complete Edition” – while somewhat spartan, each includes a handy “roll” button, which allows you to spin your ship without killing your controller or your thumbs (though some purists refuse to utilize it). Japan scored not one but two limited editions, a “Sound Box” which packs in a soundtrack CD, and a “Capture Box” with a superplay DVD – later on the two games got individual reprints under the “SuperLite” budget label. Europe was lucky enough to rate a well-handled localization of the “regular” Complete edition, but the other side of the Atlantic was shafted completely.

A few years later, along comes a bona fide Psyvariar sequel: not only have the graphics been dramatically improved, but you now choose between either a “shooter-type” or “buzz-type” mech at the beginning to correspond with your play style (though you’ll still need skill in both areas to succeed, regardless of your preference). In most other respects this followup is similar to Revision, though now the difficulty level of each stage is automatically chosen based on your performance in the previous one; moreover, your craft will no longer “evolve” mid-stage, but will wait until the current mission is finished to do so. The PS2 version, subtitled “Ultimate Final”, is widely considered the best port available: though load times are a bit longer and some of the graphical effects aren’t as flashy as in the Naomi or Dreamcast originals, the exclusive extra content more than makes up for it. Along with the return of the “roll” button, you get a stage select, a “mission” mode, a gallery, a “visible hitbox” option, and a pack-in replay DVD – sadly, unlike its predecessors this one never left Japan, and is a ways trickier to track down.

Shop for Psyvariar Series on eBay

(JP/PAL, CD) While the Psyvariars have managed to garner themselves a bit of a cult following, only a handful of shmuppers are familiar with Skonec's "other" shooter, Homura ("flame" or "blaze"): a shame, as it's rather good too. You play as some sort of fallen angel/samurai, who not only fires off shots but slashes with a close-range sword: in similar fashion to Giga Wing the latter attack can knock shots back at enemies, but you'll need to "recharge" for a few seconds between strikes. Your blade has another, more impressive function as well: if you take a swing directly at a (non-boss) enemy instead of a bullet, your character will go nuts and zoom invincibly all over the place, insta-killing all adversaries present. This technique is not only a handy "screen wipe", but your key to high scores: the number of enemies you bring down in one berserker rush becomes your point multiplier (i.e., kill 20 enemies and everything's now worth x20). This value slowly decreases over time, so once you come across another big group of drones you'll want to slice them up to keep the value high: don't just decimate everything you see, though, because the multiplier is reduced every time you slash, and not every screenful of enemies will be crowded enough to make up for the difference.

Otherwise, Homura is pretty straightforward: defeated enemies leave behind fixed-value tokens which both add to your score tally and power up your bullets, while pressing both "shot" and "sword" at the same time will set off a smart bomb (you can map this function to a separate "bomb" button, but need to refrain from pressing any other keys at the same time for it to work, which feels awkward). There are only a handful of stages (with one hidden final level if you can 1CC the first few), but you do have the choice of an "easy" or "hard" route halfway through each, which injects a bit of variety. Apart from an image gallery there's not much to see in terms of add-ons, but the game is a solid bet just as it is: moreover, thanks to a capably-handled PAL localization and a "Best" edition in Japan, it's not a prohibitively elusive acquisition either.

Twinkle Star Sprites (Series)

(JP, DVD) ADK's unique mid-90's "versus puzzle shmup" enjoys a devoted fan base to this day, but surprisingly few are aware that it eventually received a PS2-exclusive sequel: publisher SNK's disappointing decision against localization (despite early hints to the contrary) certainly didn't help matters. Anyway, apart from new 3-D graphics and a reshuffled cast, "La Petite Princesse" follows closely in the footsteps of its elder sibling: players get a half-screen to fly around in, and one's main goal is to take out patterned enemy formations in one shot by setting up chain reactions. This, in turn, sends fireballs (which can be volleyed back and forth) and other nuisances over to the opponent's territory, while simultaneously building up a "charge" meter which can be expended for additional attacks: of course, you've still got a supply of smart bombs, occasional floating items, and

the “Fever” mode power-up to keep things interesting. The play modes (Story, Character, and Versus) are also the same as before, though the presence of a gallery and lots of voice acting spruce the place up a bit – online play is technically supported, though it’s largely a moot point by now, especially for non-Japanese gamers.

Based on what’s been written so far you might be inclined to think that La Petite Princesse is a straight-up reskin, but spend some time with it and you’ll start to notice a handful of changes. In a nutshell, you might say that LPP is a bit more “mellow” than its ancestor: the overall pace is a tad slower, fireballs can’t be “juggled” as many times as before, and the CPU difficulty has been toned down. This is nowhere near enough to totally kill the experience, but TSS veterans should still be advised that this sugar rush is a bit less of a buzz than they’re probably used to: don’t let that discourage you too much, since anyone remotely interested in this sort of thing (basically, any gamer who can stomach the art style, which is somehow even more sickeningly cute than the first’s) still ought to pick this up, and thanks to a budget reprint that shouldn’t be very hard to do. But dangit SNK, I’m still a bit miffed at that judgment call back there...and your undying determination to bring us Samurai Showdown Sen does not improve my mood.

By the way, readers might have noticed that the above subheading mentions the Twinkle Star Sprites “series” – the reason for this is that the original Neo-Geo version is also available (twice over, actually) on the PS2, though sadly it hasn’t survived the transition unscathed. First and foremost it’s packed in as an unlockable extra on La Petite Princesse, but you’ll probably end up ignoring it, since the graphics have been garbled up somewhat and slowdown levels are ridiculously high (and non-adjustable, unlike on the superior Saturn and Dreamcast ports). Your second retro option is “ADK Tamashii”, a Japan-only set of five ADK arcade titles, TSS included: the gameplay is more faithful here, but the visuals are still a bit of a mess. If you crave the sprite-based Twinkle Star Sprites experience (and who doesn’t?) you’re probably best-served seeking it on a different system.

Mushihime-sama

(JP, DVD) Shmuppers familiar with the anime/manga Nausicaa of the Valley of the Wind might recognize some of the superficial concepts at work in Cave’s Mushihime-sama (roughly “insect princess”), which stars a young lady astride a gigantic beetle: her job? To shoot down even BIGGER insects, of course (one thing not borrowed from Miyazaki is any hint of nuance). “Mushi” does little you haven’t seen before as far as the core experience is concerned: collect power-ups to earn better weaponry (plus switch your shot/speed “mode” if you let them float around long enough), drop the odd bomb to get out of trouble, and deploy up to four laser-equipped “option” helpers for a bit of supporting fire. One admittedly handy new feature, a standard in later Cave games, is your hit area’s becoming openly visible while the “shot” button is held down: this helps to take a lot of the guesswork out of tap-dodging.

That said, the real draw here, apart from the attractive graphical and aural styling, is the disparate trio of play modes to choose between: the first, “Original”, emits something of an “old-school” vibe, what with its bare-bones scoring system (just shoot stuff and collect what’s left behind), fast enemy bullets, and a slightly larger hit area to protect. “Maniac”, on the other hand, plays more like your “standard” Cave title, with lots of slow enemy patterns to weave through and a modified DonPachi-esque chaining system (which can be exploited in a rather unusual fashion; check an FAQ for more info). “Ultra” has the same basic rules as Maniac, but enemies are much, MUCH nastier – the game even displays an ominous warning if you try to select it. Want to prove your worth as an elite shmupper? Mastering

Ultra mode ought to do the trick...best of luck with that, by the way.

Instead of outsourcing the project, as they did with Dai-Ou-Jou and Galuda, Cave ported this game themselves, with Taito handling the publishing end: while the conversion is passable, it's definitely not in the same league as Arika's work. For starters, those exquisite visuals have been converted lazily from the original hardware, leaving them looking particularly blurry on some screen setups; more importantly, slowdown levels don't match those of the arcade version, and certain areas feel jerky to navigate as a result. The options menu provides the bare essentials (and a gallery), but the practice and replay options are pretty limited – the rapid-fire adjust, which replicates the “full auto” hack on some cabinets, is a boon to score attackers though.

There is an Arrange mode too, though it's also something of a disappointment – it plays closest to Maniac, with some of Ultra's shenanigans thrown in (including the stupidly hard “true” final boss), but you start off with extra options, can swap your weapon's “type” at any time, and automatically “bomb” when you're hit. In most respects it's basically a “beginner” mode, but at least it offers (non-credit-feeding) lower-tier players an opportunity to see more of the game than they might have otherwise. Warts and all, Mushi's PS2 port got a “Taito Best” reprint which makes it a bit easier to find, though collectors will be most interested in the pricey first-print Limited Edition, which came in a cardboard outer box and included a figurine of Reco (the heroine) as a young child, plus a phone card: a separate “grown-up” statuette was available as an accompaniment to the game's soundtrack, if you want to complete the set. Ibara

(JP, DVD) Fans of cult developer Raizing could only lament the end of an era in the year 2000, when the team was folded into sister company 8ing and ceased producing its own games. Some time down the line, though, former rival Cave decided to bring Raizing bigwig Shinobu Yagawa on board for a new shooter, and Ibara (“rose”, “thorn”, or “briar”) was the result of this once-unlikely partnership. As might be expected, in many ways this isn't really a “Cave game”; it's best-described as a spiritual sequel to Raizing's iconic Battle Garegga. Once again the main keys to scoring (and, by extension, survival) are expending your bombs (which you must “build” by collecting shards) on specific score-rich targets, dismantling (and greatly angering) the bosses, and weaving through enemy fire to snatch falling medals. The game's “rank” level, which bumps up the challenge, tends to increase quickly, and the only way to knock it back down a peg is to die, so you'd better keep racking up those points (and resulting extra lives) if you want to last very long.

Even when you've got a good “rank-control” rhythm down this game is no easy clear, but it does offer players some concessions that its unofficial predecessor didn't: while you can't manually shift the formation of your helper gunpods anymore, you can collect different ammo types for each, and thus have a variety of attacks at your simultaneous disposal. For another, if you're having trouble with one of the game's impractically-dressed lady bosses/mascots (trust me, you will) you can “charge up” a bomb before release to launch a “hadou burst”, and inflict big damage to your target. Finally, while bullet visibility is still less than ideal, it's been improved a ways over Garegga's layered neutral tones, so you're less likely to wonder what the heck just killed you – you'll still be dying a lot, mind, but at least you'll (probably) know why. If you somehow still find the regular game too easy, “Harder” and “Extended” modes are also available – how nice of them. Ibara's reboot of one of gaming's most unusual and counter-intuitive design mentalities didn't result in a major commercial hit, but the villainous “Rose sisters” became popular enough to later star in their own game.

As for the PS2 version, it was handled by the same coalition that ported Mushihome-sama, and the overall quality is about the same: not awful, but hardly great. The lovingly-detailed graphics have again been muddled up some (though not quite so much as in Mushi), slowdown is still off-kilter, and the option settings aren't as robust or user-friendly as they could be. On a brighter note, there's another Arrange mode here, and it's substantially more interesting than Mushi's – it plays a little like Ibara's later "Black Label" arcade version. The player hitbox is smaller, bullets can be made brighter, the soundtrack has been remixed, the main shot can be "focused", and both option formations and secondary weapons (once collected) can be cycled through at will. Most importantly, the current "rank" level is (finally) openly displayed, and works differently than before: the difficulty now goes up only as you collect items, and can be lowered by bombing away large masses of bullets. This process also awards lots of points, so Arrange players can either limit their pickups for a relatively "safe" journey, or get greedy and tempt fate for last-second screen clears and massive score boosts. Ibara received a relatively low PS2 print run (certain pre-order copies came with a collectable hint booklet) and plans for a "Best" re-release were eventually scrapped, so expect to fork out handsomely for this payload of digital masochism; more importantly, make sure you're up for it before you do. Of course, the separately-released official figurines of all six Rose sisters will bankrupt you even more quickly, should you covet them...

Double Shienryu

(JP/PAL, CD) If you've looked through the Saturn or PS1 shooter lists on this site, you might remember coverage of Shienryu ("purple flame dragon"), a vertical shmup most directly comparable to the Raiden series; rumors once circulated that developer Warashi was working on a sequel, but nothing concrete ever came of it. Then one day, out of the blue, the company re-releases Shienryu for the PS2 as Volume 37 of the "Simple 2000" budget series, and bundles a completely new "vertizontal" shmup with 3-D graphics, "Shienryu Explosion", onto the disc with it. Whether this latter title was ever intended as a true sequel is unclear, especially considering how differently the two games play.

Let's start with Explosion, which has more in common with modern "bullet hell" shooters than anything else, though it's a much less challenging entry than most, thanks in part to a generous extend rate. After choosing one of three ships at the beginning (plus a pilot, which only has cosmetic effects), you have constant access to "light", "medium", or "heavy" weapon fire, each of which affects your speed and spread as well as your strength – these can all be set to a single button, which will vary shot output based on how hard you press it, or to separate "fixed" keys. This gimmick is tied nicely into the scoring system, which awards you more handsomely for killing enemies with "stronger" shots, but will reduce the points gained if you collect the "star" items they leave behind while continuing to fire heavily: this means you'll be juggling your shot status back and forth a lot to maximize your score as you zoom around the screen. Two "hidden" stages are your reward for a bit of extra effort, but otherwise the game is solid if unexceptional: definitely not a bad acquisition for the asking price though.

Its companion port of the "original" Shienryu, for that matter, is pretty nice too, complete with tate mode and low-res screen options: the one thing it's missing (besides a way to get back to the main title screen without resetting the PS2) is a high-score save, which is especially odd considering that both these features (and a practice mode to boot) are accessible in Explosion. Later on the two were again packaged together in Volume 5 of the Simple series' "2-in-1"

collections (simply retitled “The Shooting”) and paired with some sort of 3-D “Helicopter” game – the suggested retail price remains the same, so just pick up whichever one you can get cheaper and disregard the bits you don’t care for. European gamers did receive a localization dubbed “Steel Dragon EX”, but it’s plagued by borders, slowdown, and a (further-) reduced challenge level, so spring for the import if you can.

Strikers 1945 I & II / Gunbird 1 & 2

(JP/PAL, CD) Prolific shmup developer Psikyo put together no fewer than four “double packs” of its arcade shooters on the PS2, most of them under the “Psikyo Shooting Collection” label – Strikers 1945 I & II came first, featuring (obviously) the first two entries in the alternate-WWII series (sorry, Strikers III fans – your wait continues). The games play very much alike in most areas: fast orange bullets, slightly-delayed bomb activation, randomly-ordered stage progression, transforming mecha bosses, and snagging shiny gold bars with good timing for extra points are the order of the day in each. The only major difference between them, apart from the stage layouts and selection of playable aircraft, lies in how the “charge shot” is implemented – in the first game it’s a standardized “strong” attack affected only by your plane’s weapon level, but in Strikers II it’s reliant on a separate “power meter” which fills up as your kill count rises and is expended for more potent charged blasts. Both games are serviceable, but the porting job is less than optimal: load times are lengthy, high scores aren’t saved, and neither the graphics nor the sound (especially on II) are arcade-accurate. Collectors will want a first-print copy of the Japanese version, especially one containing a replay DVD; more economically-minded sorts can seek out the “Taito Best” reprint instead. The PAL release (“1945 I & II: The Arcade Games”) retains tate mode, but lacks a 60-Hz option. For some odd reason the company’s Gunbird compilation (dubbed “Gunbird Premium Package” in Korea and “Gunbird Special Edition” in Europe) isn’t technically part of the “Psikyo Shooting Collection” series, so don’t look for it under that name. In any event, the first Gunbird plays very much like the original Strikers 1945, minus the variable score items and plus a somewhat annoying “automatic power-down” mechanic; its true defining characteristics are the “semi-cute” fantasy setting and brief, silly story sequences that give it some personality. Sequel Gunbird 2 pumps up the challenge level and expands outward in several areas: the charge meter from Strikers II has been adopted, and moreover can be spent either on the usual charge shot or a powerful close-range melee hit. “Timed item collection” scoring has arrived too, and doles out additional rewards for “chaining” together two or more “perfect” coin grabs in a row; also keep an eye out for special spots where you can uncover a bonus-loaded “gem head” with a well-placed attack. By the way, just so you know, hidden samurai character Ayin is available, but guest star Morrigan from Darkstalkers isn’t – she’s a Dreamcast exclusive. While this collection never got a reprint, Psikyo put more effort into the port this time: high score saving and a handy Practice mode have both been implemented, and while the first game lacks the “gallery” extras of the 32-bit versions, otherwise it looks and plays pretty nicely. Gunbird 2 doesn’t fare quite so well: some stage elements have been shifted around and there’s a bit of mid-stage loading too. PAL gamers, meanwhile, finally got a 60-Hz option, along with all the other new features...EXCEPT a score save, dangit! One last thing: Korea also scored an exclusive 2-in-1 (or should that be 4-in-1?) release which stuffs both the Strikers and Gunbird comps into a single package: both of them are pretty much exactly the same as the Japanese releases (minus the replay DVD), so if you want to pick up the whole kit ‘n caboodle in one shot this might be your most cost-efficient way to do so.

Sengoku Ace & Sengoku Blade / Sol Divide & Dragon Blaze

(JP/PAL *, CD) Psikyo's later PS2 collections tend to be the most sought-after, since each of them boasts a game which has yet to see a home port on any other system. Sengoku Ace, Psikyo's very first release, fills that role on Psikyo Shooting Collection Volume 2, a.k.a. the "Sengoku" pack – obviously it's a very basic vertical shooter in the company's signature style, and also contains the unpopular "auto-power down" mechanic which wasn't scrapped until several releases later. What does help to set the game apart, aside from the goofy story scenes (which set the template for Gunbird), is its evocative atmosphere, heavily steeped in Japanese mythology – this ambience remains strong in the sequel, which shifts to a side-scrolling perspective. The auto-power down is gone by now, and catching coins at the right moment leads to extra points, but otherwise it's basically the first game turned on its side, with a few minor tweaks: one notable new feature is the ability to pick one of two final stage routes, each of which leads to a different ending for your chosen character(s). The programming job here is solid, if unremarkable: single-stage practice modes and a sound test are present, random stage order can be turned off, and everything runs pretty smoothly, though Sengoku Blade is missing the bonus contents from the Saturn version (including Marion's playable cameo, though Ayin's still hanging around). As with the Strikers collection, Japanese first-print reserves came with a replay DVD, and later on a budget edition hit the shelves; Europe received both games too, though each was localized separately, under their Western arcade names, "Samurai Aces" and "Tengai". Thankfully, both have high score saving (finally!) and a 60-Hz option too. Appropriately enough it's again overshadowed here, this time by Dragon Blaze, Psikyo's last and best-looking vertical shmup – you play as a dragon rider with the ability to "shoot" his or her mount straight forward for a powerful up-close attack (and some bonus coins).

Sol Divide, another Psikyo side-scroller, headlines Volume 3; its main hallmarks are digitized graphics, a medieval/fantasy setting, and a focus on close-range melee attacks (it also spawned home versions on the Saturn and PS1, and was written up in those corresponding articles). This is instead a faithful reproduction of the arcade original, but that means it lacks the marquee RPG-flavored "Original Mode" of its previous conversions, which was the only thing preventing many players from abandoning the game due to its rather imprecise, clunky mechanics.

Appropriately enough it's again overshadowed here, this time by Dragon Blaze, Psikyo's last and best-looking vertical shmup – you play as a dragon rider with the ability to "shoot" his or her mount straight forward for a powerful up-close attack (and some bonus coins).

. This technique can also be used to position your dragon (who is invincible) in prime offensive position while you keep your character out of dangerous spots: careful, though, as splitting up decreases your overall offensive power, and changes your charge attack too. The hidden "gem heads" from Gunbird 2 return for your score-attacking pleasure, and you can even go for tricky one-hit kills during certain boss phases for additional bonus points – these modest tweaks to the Psikyo formula make Dragon Blaze a near-unanimous favorite among the company's fans. Volume 3's ports are comparable to those on Volume 2 in terms of both quality and features, though there was only a single print run for this set, making it more desirable on the collector's market despite the lack of a DVD pack-in –

PAL gamers again got separate releases of both games, localized in mostly pain-free fashion.

Gradius III and IV

(JP/US/PAL, CD) Another of the PS2's very earliest releases, mainstream gamers and reviewers alike scoffed at this humble arcade mini-compilation in real time: where, after all, was the newfangled 128-bit razzle-dazzle? Anyone possessing a bit more respect for their digital elders, though, should know that the ports offered here are just about perfect and include a couple of notable extras, from a new CG opening sequence to a slowdown adjust, sound test, and stage select. That said, these two games are among the less-popular Gradiuses (Gradii?) overall, and certainly won't have every last shmupper singing their praises aloud.

First things first: if you've only played the SNES release of Gradius III and are eager to dive into the arcade original, be forewarned, this is NOT the same game. Konami's primeval iteration (subtitled "From Myth to Legend"), is an infamously tough journey throughout (even the 3-stage "easy" mode is no cake walk); other than this largely unnecessary difficulty spike (Gradius II, after all, was hardly a bowl of cherries), the only true gameplay "innovation" here over its better-received ancestor is a single, oddly-inserted "behind-the-ship" level. In its favor, III does expand on its big brother's "power-up select", offering additional tweaks and even a full-fledged individual "weapon edit" should you so desire; just bear in mind that you're gonna die a lot no matter what you're equipped with. At least the PS2's ability to save checkpoints between sessions makes practicing a bit easier.

In like manner Gradius IV (subtitled "Fukkatsu", or "Ressurrection"), despite its impressive-for-the-time smattering of 3-D graphical effects, still feels like a step back for the series at large, particularly in the aftermath of Gradius Gaiden's excellent debut on the PS1. Weapon selection isn't as robust as in III, and the sometimes-redundant level themes and enemies begin to wear particularly thin without anything truly new (apart from the eye candy) to accompany them. Granted, both it and III are soundly-constructed games, but with this collection you're getting what it says on the box, no more, no less – whether this is satisfactory is reliant on just how reverential you are of Vic Viper and company. On a brighter note, III and IV saw daylight in all three regions (and got several reprints in Japan) so even if these aren't your absolute favorite shooters they're still easy and cheap to add to your collection...if you don't already have them on the PSP Gradius collection, anyway, though that one lacks a few of the extra trinkets found here.

(JP/US/PAL, DVD) Well, I suppose that Irem sort of meant it – though a pair of strategy spin-offs and another port or two of the original game have snuck onto the scene since this “final” R-Type entry hit shelves over seven years ago, it does still remain (technically, at least) the last “official” chapter of the series. Formula-wise it picks up right where Delta on the PS1 left off: bludgeoning enemies with your Force fills up a “dose” meter, which when topped out gives the device extra ramming power, bonus score rewards, and a single-use screen-clearing “smart bomb”. Oh, and by the way, a couple more ships have been added to the playable roster...y’know, just a HUNDRED of ‘em or so, from throughout the series’ lengthy run and beyond. Sure, a fair portion are simply “upgrades” of other models, and not every variation is equally useful to say the least, but there’s still an impressive amount of variety in this hangar, almost unprecedented amidst its genre brethren: even the player crafts from Image Fight and X-Multiply make appearances, not to mention that you can tweak and customize the bits, missiles, charge cannon, color scheme, and other details for each and every fighter.

This might sound like a wet dream for R-Type fans, and in some ways it unquestionably is: each ship you unlock reveals a bit more back story tied into the surprisingly intricate saga of mankind’s war versus the Bydo, and every enemy type you defeat gets its own viewable profile as well (note: all of this is separate from the “main” Gallery and History sections). If you can appreciate R-Type as one of the few shmups out there in possession of a genuinely non-throwaway plot, you simply must own Final: in terms of pure playability, though, longtime gamers’ receptions to it have been decidedly lukewarm. R-Type has always been characterized by a comparatively slow pace and heavy emphasis on memorization, but in Final the stage designs tend to drag on even more than usual – a handful of branching paths diversify things a little, but the unlock requirements for certain craft are ridiculous, and can make the process feel like a grinding slog (the bizarre “AI vs. Mode”, for its part, is probably best ignored altogether). R-Type Final was granted a worldwide release (plus a reprint in Japan) and isn’t overly hard to find (though tracking down its 30 different promotional dog tag necklaces is another matter), so despite its shortcomings you won’t be risking much by picking up a copy – just be prepared to categorize it as a slightly-too-reverential tribute to the series more than a “full-fledged” shooter.

Raiden III

(JP/US/PAL, CD) While Seibu Kaihatsu, creators of the Raiden series, do not “officially” develop games anymore, their legacy lives on within offshoot company MOSS, whose first project was this third “numbered” Raiden game. While the 3-D graphical upgrade is somewhat bland compared to the

detailed spritework of Raiden II and Raiden Fighters, many should be pleased to know that the game is a bit more “user-friendly” than the older ones: your plane’s hitbox has been downsized (though not to “bullet hell”-level tiny), your firepower now gains a level even when you pick up a different weapon than you currently have, and bombs activate immediately to cover the whole screen. Speaking of weapons, the classic spread shot and straight laser are pretty much as you remember them, but the infamous purple “toothpaste” weapon is now “minty green” and no longer locks onto enemies: the “straight” and “homing” missile sub-weapons are still at the ready, accompanied by a new mid-power, semi-homing “radar” rocket.

In terms of scoring, you’ve got fixed-value medals and Fairies to find (no “Miclus” dragons, though), but the centerpiece is the “flash shot” system, similar to the “quick shot” from Raiden Fighters: simply put, the faster you kill stuff the more points you get, up to double base value. This makes high-score runs an exercise in sequential memorization, especially since your ship still moves so slowly, but you’ll probably be doing a good deal of that anyway, since enemy bullets move a lot faster than you do (and their dull yellow color blends in frustratingly easily with onscreen explosions). While a lot of the basic materials and set pieces have been recycled from previous Raidens, MOSS includes a nice set of extras to sweeten the deal: a score attack, boss rush, gallery and replays are all accounted for, but the coolest feature is “double play” mode, which allows you to control two ships with one controller. All in all, while Raiden III certainly isn’t bad (and a temptingly cheap pickup), most fans don’t consider it one of the series’ high points: its immediate sequel, Raiden IV (which received a port on the 360), possesses a similar “feel” but has been tweaked and polished in several areas, so some players might want to just skip ahead to that one.

XII Stag and Shooting Love: Trizeal

(JP/PAL* CD) These two shmups come to you courtesy of Triangle Service, a small developer which most recently put out the “Shooting Love 200X” package on the 360: XII Stag, as it happens, was their very first product (by the way, the titular “XII” is the Roman numeral “twelve”, not some wacky acronym). Your little blue ship is equipped with a standard upgradeable forward shot and a limited-range bomb, but neither is the linchpin of your arsenal – if you move the d-pad rapidly back and forth from left to right (similar to “rolling” in Psyvariar) your ship will fire short-range, powerful “burst” shots from both sides, and the faster you mash the stronger the attack gets. Enemies are also damaged, interestingly enough, if they touch the jet exhaust coming out of your rear – as you kill adversaries with either the “burst” or “exhaust” weapons a multiplier value builds, reaching its maximum at x12 (or should I say xXII). This makes score-attacking another memory-heavy affair, as you need to be in very specific positions at specific times to best utilize these techniques – as in Raiden III, though, enemies tend to suddenly kill you in sneaky ways to begin with, so you’ll be experiencing a lot of trial and error no matter what. This is pretty much a no-frills arcade port, but there is a welcome option to map “bursting” to a separate button, and PAL gamers got a thoroughly un-ruined localization; neither the key feature nor the execution are anything too exciting, really, but there are certainly worse ways to kill a bit of free time.

Triangle Service’s second shmup is probably best-known for prompting an infamous online plea from company president Toshiaki Fujino, who begged fans to buy its original Dreamcast port to keep the business afloat – it appears enough people acquiesced, as the team took a shot at the PS2 a year later. As the “shooting love” portion of the title suggests, Trizeal is something of a mash note to the genre’s roots, and contains a number of visual references

and other nods to the classics. In terms of weaponry you have constant access to three options (a spread vulcan, a piercing laser, and homing missiles) which are powered up individually but fired all at once: only one can be your “primary” shot at a time, though, so the others will provide weaker “supporting” blasts when switched out. Apart from run-of-the-mill blasting and boss dismantling (plus a few secrets), your primary scoring method is a “medaling” system inspired by Raizing: the more you can catch without missing any, the higher their point values get. Unlike in Raizing’s games, though, almost EVERY enemy killed drops a medal, and these prizes drop off the screen quite fast to boot, which makes snapping them all up a rather sloppy affair.

While one can definitely feel the designers’ genuine “love” for the old days in Trizeal, at the same time all the sappy nostalgia can’t help but register as a conceptual crutch – much of the challenge present here is the fault of sudden, out-of-nowhere deaths (and the resulting power-down), devices many shmuppers wish had been left to a bygone era, and the rather antiquated graphics don’t do the game any favors either. The PS2 port, for its part, is pretty similar to the Dreamcast and Xbox 360 versions, with a few changes: slowdown levels are a bit different, a couple of handy autofire options have been added, and the DC’s “omake” level has been replaced by a rapid-fire “skill test” which gauges your shooting and dodging abilities via several different mini-games. There’s also a “score attack” mode you can use to practice individual stages, or even level 2’s “lifting” segment by itself, to master the art of keeping that blasted rock in the air (oh, and a code allows use of the ship from XII Stag). Those accustomed to “modern” shmup conventions will probably find themselves a bit shell-shocked by Trizeal, but long-time players might not mind the return to a simpler, more straightforward era – the only real reasons to possibly dissuade anyone from this particular edition are the Dreamcast’s pre-order bonuses and the 360’s additional bundled content.

Giga Wing Generations

(JP/PAL, CD) Generations, the third and presumably final Giga Wing entry, is, appropriately enough, a sort of “greatest hits” amalgamation of features and designs implemented across Takumi’s all-too-brief shmupping history. As in Giga Wing 2 you can fly right over enemies without taking damage, but the “reflect laser” option is gone, as are any screen-filling “volcanon” medal splits; in the style of the first Giga Wing, players again need to one-credit the game to reach its final level, as well as strike a balance between both reflecting and blasting for optimal results. Unlike either of the earlier games, just about any semblance of plot has been unceremoniously expunged: no characters, no dialogue, you just pick a plane and start blowing stuff up (nothin’ wrong with that, mind you).

In terms of technical advancements enemy bullet visibility has been significantly improved, all those lovely medals are smaller and less obstructive, and two all-new quirks prop up the scoring system: first, shooting enemies in a certain way now spawns “shot medals”, which boost your overall counter but not the stage multiplier, and two, destroying stuff up close awards an additional “proximity” bonus. The series’ ever-present “score attack” mode is back for an encore, handy for both practicing individual stages and inflating your numbers to insane(-er) levels thanks to yet another multiplier: a sound test is about the only other “bonus” you get, but not a heckuva lot else was needed, really.

At its heart the game is quite fun, in some ways the best of its breed: it’s a crying shame, then, that its PS2 port (Generations’ only non-arcade iteration) is so inexcusably slipshod. While the Type-X version hardly pushed the

envelope in terms of visuals, the onscreen action was at least able to run smoothly without taxing the hardware: why, then, does the port only run at 30 FPS or less, rendering every movement jerkier and less precise (an especially egregious disadvantage in crowded later levels) than most any commercial shmup release in memory? It's not like the standard 60 frames was unattainable: the brief "How to Play" tutorial segment has it, even as all of the playable content suffers! Are we being openly mocked, or what?

In case you needed an additional slap in the face, there's no full-screen tate option either, another nearly-uninterrupted genre standard since the PS1 era – you'll have to settle for either a letterboxed view or a slightly-rearranged "Original" layout that's closer to the yoko orientation of the first two Giga Wings. Even under such circumstances, however, Generations' inner beauty manages to (partially) shine through, and patient players can learn to overcome the port's technical deficiencies: enough Japanese gamers apparently did so to merit a "Best" re-release, and Europe got a localization too (sans any improvements, unfortunately). Needless to say, before picking this one up make sure you're ready for the rather sizeable baggage it's saddled with.

Silpheed: The Lost Planet

(JP/US/PAL, CD) One of the earliest PS2 releases, and one of the last brought Westward by publisher Working Designs, this rather unexpected followup to the original Silpheed (whose most recent appearance was on the Sega CD in 1993) was developed in part by Treasure, though hindsight has not seen fit to place it among their premier efforts. Two central "gimmicks" are its claim to *ahem* fame: the first is the player's ability to equip two different weapons to the ship's separately-controllable pair of frontal guns, with expanding available choices as things progress. The second is yet another proximity-based scoring system, a la Omega Fighter, so the closer you are to enemies when you kill them the more points they're worth. Graphically, the signature isometric "tilt" of the original is much less pronounced here, but the game still looks quite nice, especially considering its age: the detailed backgrounds, well-rendered CGI scenes, abundant particle effects and impressive pyrotechnics impress even today. The radio chatter is still here too, in abundance, though a lot of it is too muffled to hear very clearly.

While all of the game's disparate parts sound solid on paper, they really never gel into a cohesive whole: for one thing, none of your ballyhooed firepower is nearly as impressive or exciting as the surroundings, especially compared to some of the flashy stuff that the game's bevy of bosses aim your way. The weapons system also throws a wrench into high-score play, since you can only change guns at certain mid-stage "refuel" points (which will also partially refill your life meter...yup, there's still a touch of "Euroshmup" in this game's DNA) – if you want to score well, you must remember which armaments are best-suited to picking off the particular enemy formations found in each segment and equip yourself appropriately, thus eliminating most any potential flexibility on offer for score-based play (the fact that you can't "preview" new weapons upon obtaining them only adds to the trial-and-error factor). While these shortcomings don't completely kill The Lost Planet, they do hold it back from becoming the minor classic it could have been: on the bright side it is available in all three regions and shouldn't tax the wallet much to obtain, so warts and all it's still not a terrible addition to one's shmup roster.

Star Soldier

(JP, CD) According to legend, developer Hudson, at one time, was actually associated with classic series like Bonk and Adventure Island, as opposed to casual licensed party fare – most scholars dismiss these tales as mere wishful thinking, but speculation continues to thrive. Anyway, back in the early 2000's the company sought to reinvigorate its true believers, and hence the “Hudson Selection” series of “2 ½-D” remakes for the Gamecube and PS2 was born. Volume 2 of this mini-run is an update of none other than famed “caravan” shooter Star Soldier, which first hit the NES in the mid-80s; while the revamp's low-end polygonal visuals hardly dazzle, any gamer dealing with the early stages of carpal tunnel syndrome should feel right at home. You can't fly under certain background scenery anymore, but the power-up structure, culminating with the titular five-way “star” shot, is pretty much unchanged, as is the lack of practical autofire: yup, you'll still have to bust your fingers (and controller buttons) to get anywhere unless you “cheat” with a turbo pad (remember those?). At least there's still plenty of stuff to shoot: slews of point-rich ground targets and bonus tiles supplement the endless, zig-zagging enemy waves, which only spawn faster if you manage to pick them all off.

While bosses and a few other elements have been given a once-over, most of the little scoring “tricks” you remember are intact (for instance, bringing down two or more “giant eyes” at the same time still works) – of course, you've also got two-minute and five-minute “caravan” modes when you'd like a break from the standard game's stage progression. The only truly “new” gameplay addition, setting aside one's ability to adjust movement speed on the fly, is a short-range secondary “burst” weapon, which can be used to mete out extra damage, cancel bullets, and crack open certain special item canisters, though it needs a moment or two to recharge between uses. As with Trizeal, shmup fans who prefer a contemporary setting won't find a heckuva lot to love in a game solely devoted to resurrecting the past, but anyone who doesn't mind a brief retro kick once in awhile ought to have some fun here – just don't expect the moon, as this was a budget release to begin with (though there are a couple of unlockables, including an old TV commercial or two). I'm not aware of any major differences between this version and its Gamecube equivalent, so feel free to pick up either, as both should run pretty cheap – there was also a PSP port if you prefer to blast your aliens on the go.

Thunder Force VI

(JP, DVD) So you thought a little thing like the seeming demise of series developer Tecnosoft (or Techno Soft, if you will) could keep the once-mighty Thunder Force series down, did you? O ye of little faith! Over a decade after the 32-bit Thunder Force V, to all appearances, played the role of “slightly-

disappointing endcap” thanks to the cancellation of an unfinished Dreamcast followup, Sega themselves swoop in out of nowhere, bearing an officially-licensed (and PS2-exclusive) sequel. Fans hoping for a return to the brand’s 16-bit glory days, however, are in for some disappointment: TFVI, as it turns out, is very much an outgrowth of V, and retains many of its defining and divisive design choices. The same five selectable weapons (along with several “classic” bosses) return in slightly modified form, as does the “quick kill” scoring system, so the familiar process of pwn’ing n00bz via Free Range hasn’t changed much (though thankfully things aren’t quite as unbalanced as before). Despite VI’s similarity to its immediate predecessor, a handful of adjustments round out its arsenal: for one thing, while the “Over Weapon” mechanic returns, it’s now fueled by a separate energy stock (built up by defeating enemies) and lasts a set span of time when activated, so you no longer need to weaken your CRAW options or hold down the activation button to keep it going. Speaking of CRAWs, when you use the default player ship you’re constantly equipped with a set, even upon respawning: your full set of weapons sticks with you too, so being shot down doesn’t really reduce your potency at all. This adjustment handily dispels that deflating sense of post-death wimpiness, but also renders the game markedly less challenging: to compensate, extra lives are uncharacteristically hard to come by. As another concession to “old-school” fans, finishing the game unlocks a second craft with a different weapons set and vulnerability to power-down, which reinstates some tension to the proceedings.

While the Thunder Force games have historically drawn praise for their presentations, in VI things are somewhat “meh” all around – it’s an improvement over V, obviously, but definitely not among the prettiest or best-designed shooters on the system, and the synth-rock soundtrack, a near-constant strength, is more anonymous than it ought to be. Some cool, nostalgia-heavy moments are scattered about, like a SeGaGaGa-esque “boss alley” fight sequence against the older Thunder Force ships, but these hardly quell the unmistakable feeling that this game’s creators spent too much time looking over their shoulders and not enough peering ahead. Apart from the unlockable ships there are also a few hidden modes to unveil, so there’s a decent amount of content to tackle if you’re willing to accept VI for what it is (and isn’t) – the mini-soundtrack and “data book” that came with certain pre-orders ought to elicit some additional interest from memorabilia hunters.

Triggerheart Exelica Enhanced

(JP, DVD) After many quiet years of sorta-success in the shmup market thanks to Daioh, Shienryu and a few others, Warashi finally decided to abandon any appearance of restraint, infusing their next shooter with doe-eyed anime girls in mecha-leotards. Lo and behold, following humble beginnings on the post-mortem Dreamcast, Triggerheart Exelica was eventually picked up for wider release on XBLA, and then once again for this “enhanced” PS2 edition. If you’ve ever played this game on any format you already know how it works: select a character and use a combination of shots, bombs, and a unique “grappling hook” to make stuff go boom. The latter is easily the game’s most engrossing doodad, able not only to “lock on” to bosses but outright “capture” small-to-midsized enemies, which can then be spun and hammer-thrown at others or held onto as temporary bullet shields. Flinging baddies accurately can be tricky to learn, but has its rewards for the persistent: groups of bowled-over opponents leave behind bigger bunches of score medals, just begging to be vacuumed up in one fell swoop.

In terms of “enhanced” stuff for this particular port (which was handled by visual novel developer Alchemist), it’s a

pretty light selection, honestly: a third character, Faintear (the “extra boss” from previous versions), is now playable from the start, the scoring system has been slightly tweaked, the music has been remixed and expanded, and some new Story Mode sequences (including an anime intro) have been inserted, but otherwise this is pretty much the same game it’s always been. Moreover, while progressive scan is supported, in other technical respects Enhanced is off-puttingly sloppy: tate mode is only included for Arcade mode (Story is yoko only), slowdown is more prevalent than ever, and “Arrange” mode is kaput entirely. “Enhanced”, then, is most likely an object of desire for Exelica die-hards only: case in point, the stupidly expensive Limited Edition of the game, which includes an (admittedly cute) Exelica Nendoroid figurine, as well as a little inflatable balloon with certain pre-orders.

Chaos Field: New Order

(JP, DVD) As the very first creation of Compile offshoot Milestone, Chaos Field looks and feels a bit amateurish at first blush: the dated polygonal graphics, not to mention the fistful of elements “borrowed” wholesale from better-known shmups, move some observers to mistake it for a doujin product. That’s not to say it’s a terrible game, but its unusual “boss rush” structure (i.e. few to no “minor” baddies) certainly doesn’t agree with everyone either. Should you decide to give CF a chance, pick one of three playable ships and the assault begins: your main weapons are a standard shot and a short-range bullet-canceling sword; the real kicker, though, is the ability to shift back and forth between two modes, or “fields”, namely “Order” and “Chaos”. In Order, enemy attacks are less aggressive, and defeated foes leave behind more “energy” items, which power your special attacks (a lock-on and a shield) – in Chaos not only is the opposition nastier, but nearly all of your own abilities are enhanced too. This is especially important to exploit in terms of scoring, which relies on rapid-fire kills and cancelled bullets; the basic route to prosperity involves stocking up on energy in “Order” field, then switching over to “Chaos” to skyrocket the multiplier before switching back for a timely recharge (or finishing things off).

A “straight” arcade port of this odd mishmash of a game first arrived on the Dreamcast; not long afterwards an “Expanded” edition came to the Gamecube, including a new mode which, among other things, throws a few “popcorn” enemies in between bosses to break things up a little. “New Order” for the PS2 retains this addition, but also squeezes in a “Challenge” mode (basically a Time Attack variation): as such, this is technically the most feature-heavy Chaos Field, but it also has some issues. The graphics (for whatever they’re worth to begin with) aren’t as crisp here, and some extra slowdown is present; thankfully the high score saving actually works as advertised (unlike in the DC original) and the dark electronica soundtrack will still have your toes tapping. If you’re a big fan of the game then you might want to track this “sorta-definitive” version down, but less-devoted players will probably be satisfied with the cheaper and more readily-available Gamecube port, or the Milestone Collection (aka “Ultimate Shooting Collection”) on the Wii.

(JP, DVD) As the debate among fans concerning how this game's title is actually spelled and/or pronounced continued (all inquiries remain inconclusive), Radio Allergy quietly left its native arcade and Dreamcast to visit both the PS2 (hence the "Precious" subtitle) and the Gamecube (surnamed "GeneriC"), in similar fashion to big brother Chaos Field. The silly extra words denote more than just the featured system, though: each version boasts an exclusive bonus mode (more on that in a minute). If you haven't played Radirgy before, here are the basics: three speed settings and "main" weapons are available for your craft, though you'll always have access to a short-range sword and a frontal shield which automatically deploys when you're not attacking. Punishing enemies with the shot or sword (feel free to charge in, as only bullets damage you) gradually fills an "Absnet" meter, which can be spent to activate a temporary invincibility barrier when full: on the other hand, doing damage with the shield or said barrier builds a score multiplier, so you'll need to juggle your various offensive and defensive options to keep everything in balance. Speaking of juggling, you can also use your sword to bat falling items around and alter their characteristics: if you sprinkle in a bit of extra bonus-collecting and boss-dismantling (aim for the antenna!) you've got most of this game's essentials down.

So, how does "Precious" measure up? Seeing as it's afflicted with many of the same shortcomings as Chaos Field: New Order, not all that well. Radirgy's cel-shaded graphics, while unique for a shmup, were never anything groundbreaking, but again don't display as sharply here as on the Dreamcast; extra slowdown also remains a problem, not to mention another annoying score-entry glitch. What about the much-hyped "Okawari" (literally "second helping") mode, which appears alongside an individual-stage "score attack"? It's decidedly more challenging than the "normal" game (and doesn't allow continues), but that's about all there is to it: unlike GeneriC's "Manpuku" ("full stomach") mode there are no new scoring techniques or other elements to denote a genuinely worthwhile addendum to the original. Precious is commonly cited as the least-desirable Radirgy iteration by fans, especially since the original game is so easily obtainable nowadays, courtesy of the aforementioned "Ultimate Shooting Collection". For swag seekers, certain pre-order copies (for both this and the Gamecube port) came with a black wristband bearing the name "UMBRA" (the evil terrorist organization you fight against), so happy hunting for that.

Cho Aniki: Sei Naru Protein Densetsu

(JP, CD) Run for the hills, everyone: the bikini-briefed muscle men are back, and gyrating more fiercely than ever! Yes, the infamous Cho Aniki series leaves its unmistakable calling card on the PS2, with the "Legend of the Holy Protein" – believe it or not (and if you know anything about these games, you

don't put much past them), this time around you actually control a flying "protein" glob, while marquee bodybuilders Adon and Samson serve as your ever-present "option" escorts. The three of you power up separately, so to "Build Up!" everyone's shot strength you'll need to steer the appropriate recipient into floating item capsules: your creepily-smiling twin beefcakes can also block enemy bullets, but power down after taking too many hits.

Other than that, you've got a pretty formulaic shooter on your hands (Psikyo played a part in its development, so you can expect this game to have some of the company's "feel" to it, gameplay-wise), except for the infamous "Men's Beam" ability, which requires you to stop shooting and start rotating the right stick, which causes your manly assistants to shake their hips furiously as they charge it up (yes, I'm serious, and yes, it's incredibly uncomfortable in pretty much every manner imaginable). The graphics, to put it bluntly, are pretty awful, but the soundtrack remains bizarrely catchy, as per usual. All told, while this Cho Aniki is a definite improvement on its dismal 32-bit predecessor, it's still a game you'll pick up purely for its unabashed weirdness, if at all.

Sega Ages (Series)

(JP/US*/PAL*, CD/DVD*) Starting in 2003, the ever-fluctuating Sega saw fit to remake and/or bundle a whole bunch of its classic console and arcade games for budget-priced consumption on the PS2: over 30 entries in the resulting "Ages" series were eventually bestowed upon Japanese fans. While the quality of each release varies widely (not surprising, since several different developers got involved over the years), shmuppers got a worthy pair of Fantasy Zone variations out of the deal. The earlier arrival, Volume 3, is a remake of the original Fantasy Zone with cel-shaded graphics: you can choose between a classically-styled "Arcade" mode or "Original" mode, which plays much the same but adds some extra levels and 3-D bonus sections. Then there's Volume 33, "Fantasy Zone Complete", the final Ages release, and a doozy at that – not only does it cram in arcade, SMS, and re-arranged versions of the first two Fantasy Zones (the highlight being a long-awaited System 16 revamp of II, with lots of new features), but also tosses in Super Fantasy Zone and Fantasy Zone Gear for the Genesis and Game Gear respectively (heck, even non-shmup spinoffs Fantasy Zone III and Galactic Protector are on here; about all that's missing is the unreleased Space Fantasy Zone). Everything plays swimmingly throughout, and each included game has a ton of options and extras to tool around with: super-fans should begin their search for the limited edition bonus items, specifically a four-CD soundtrack collection and a wind-up music box. If you're a fan of Opa-Opa and company, these two "Ages" (especially Complete) definitely deserve a spot on your shelf.

Two other shooter-centric volumes might also be of interest: Volume 21, the "System 16 Collection", contains faithful reproductions of the arcade and SMS releases of Quartet (aka Double Target, a pseudo-run-n-gun with a jetpack) and SDI (aka Global Defense, a combination of side-scrolling and "missile defense" levels, both of which require you to utilize an aiming reticle). The latter game supports mouse control, and if you sprung for this volume's "Super DX Pack" you got a mini USB mouse (along with the standard pin and OST that came with most other such packs). Volume 23, the "Memorial Selection", bundles a disparate selection of five very old titles together, plus updated remakes of each – two are shooters, namely Tranquilizer Gun (an odd maze hybrid with a poaching theme, of all things) and Borderline (a "jeep shooter" combining scrolling and non-scrolling stages, though the remake has been molded into a "twin stick" blaster instead). Most everything on both of these collections is faithful, at least in spirit, to the originals, though they'll likely register as too dated for many players as a result.

If you're in the mood for other types of shooters, the Ages collection definitely has you covered, via Volumes 4 (Space Harrier), 9 (Gain Ground), 10 (After Burner II), 14 (Alien Syndrome), 20 (Space Harrier 2 Complete, which comes with 3D glasses), 25 (Gunstar Heroes Treasure Box), 27 (Panzer Dragoon, which spawned another music box for eBayers to fight over), 30 (Galaxy Force II, which supports the Hori Flight Stick 2 peripheral), and 31 (Virtual On). Again, some of these products turned out much better than others, but either way most of the Ages series never made it out of Japan – all the West ever got was a nine-game “economy pack” redubbed the “Sega Classics Collection”, and the only shmup on it is the Volume 3 Fantasy Zone remake (the US release includes Volume 14's Alien Syndrome too, but for some reason it was cut from the PAL edition). One bit of consolation lies in the fact that, unlike the individual Ages releases, the Classics Collection is printed on a DVD, so at least your PS2 won't make so much noise while it's running; moreover, it's quite cheap to pick up nowadays if you can find it, so it might not be a bad impulse buy if you can't or won't go the import route.

Taito Memories/Legends (Series)

(JP/US/PAL, DVD) While Sega's individually-released “Ages” never made much use of it, the then-new DVD medium's increased storage capacity meant not only that developers could expand the horizons of “current-gen” titles, but that even more older stuff could be simultaneously (re-)packed onto the next generation of “classic compilations” – fans of shmups and retro arcade-style games in general quickly unsheathed their wallets, spurring just about any company with a semi-notable back catalogue straight to work. Once the dust finally cleared, Taito had put out perhaps the most noteworthy sets of the bunch; one problem for potential players, though, is that each volume's contents vary by region, so keeping track of what's what can be a chore. Hopefully the following breakdown will help anyone trying to keep things in order. Since there are so many games included I can't go into much individual detail, but the Saturn and PS1 shmup rundown articles on this site contain more in-depth info on several of them.

In Japan, these releases were known as the “Taito Memories” series, and contain 25 arcade games apiece – the run began with two concurrent (but separate) releases, both of which include a number of shmups. The technically-first Taito Memories Joukan (“first volume”) offers Darius Gaiden, Grid Seeker, Lunar Rescue, Metal Black, Space Invaders (color), Space Invaders DX, and Space Invaders '91 (aka Majestic Twelve), as well as borderliners Bonze Adventure (aka Jigoku Meguri), Elevator Action 2 (aka Elevator Action Returns), Kiki Kaikai, and Syvalion. Its companion, Taito Memories Gekan (“last volume”) features Akkanvader (aka Space Invaders '95: Attack of the Lunar Loonies), Balloon Bomber, Front Line, G Darius, Gekirindan, Gun Frontier, Insector X, Raystorm (aka Layer Section II), Space Invaders (black-and-white), and Space Invaders Part 2, with Elevator Action, Liquid Kids (aka Mizubaku Adventure), New Zealand Story, and Wild Western off to the sides. There's obviously some overlap in there (do we really need ALL of those Space Invaders revisions?), but you still get plenty of variety for your dollar, especially considering that both volumes were reprinted twice and shouldn't be tough or expensive to snag. Everything plays faithfully (despite some videophiles' wishes for more low-res display options), but there are two sizeable caveats: first, several games on each package need to be unlocked (though the requirements are pretty easy to meet), and second, there's no vertical-screen display option for any of the vertically-oriented titles, so you'll have to play them in “yoko” mode.

A year or two later Taito cobbled together two more “Memories” collections for Japan, creatively titled “Taito Memories II Joukan” and “Taito Memories II Gekan”. Their basic structure is the same as the first pair's, with a couple

of enhancements: nothing needs to be unlocked this time, and “tate” mode can now be accessed for vertical-screen games. In terms of selection, though, many of the games on here are older and/or more obscure than those on the original volumes, which might dissuade some: shmup-wise, II Joukan contains Asuka and Asuka, Chuuka Taisen, Darius II, Exzisus, Fighting Hawk, Rayforce (aka Layer Section/Gunlock/Galactic Attack), Return of the Invaders, and Scramble Formation, plus additional shooters Operation Thunderbolt, Space Gun, and SCI: Special Criminal Investigation. II Gekan sports Gyrodine, Halley’s Comet, Master of Weapon, Mega Blast, Metal Soldier Isaac II, Phoenix, and Polaris, with extra shooters Battle Shark, LSA Squad (aka Rikukaikuu/Storming Party), Night Striker, Operation Wolf, Sea Fighter Poseidon, and Volfied. As with the first two Taito Memories, both of these received budget re-releases and ought to be readily available to most seekers: collectors ought to note, however, that first-print Japanese and Asian copies of all four “Memories” volumes came with extra accompanying booklets.

Just in case the situation wasn’t complicated enough already, Taito gave American and European fans some love too, but their arrangement is totally different: there were only two volumes released in the West, as “Taito Legends” and “Taito Legends 2”, but both pack in more games apiece than the “Memories” collections, including a few not found on any of the Japanese sets. Here’s how they break down: Legends 1, in terms of shmups, has Exzisus, Phoenix, Space Invaders (color), Space Invaders Part 2, Return of the Invaders, and Tokio, with Battle Shark, Colony 7, Elevator Action, Operation Thunderbolt, Operation Wolf, Space Gun, New Zealand Story, and Volfied out by the border. Legends 2 (the beefiest of all the sets, boasting 39 games total) gives shmuppers Balloon Bomber, Darius Gaiden, Front Line, G Darius, Gekirindan, Grid Seeker, Gun Frontier, Insector X, Kiki Kaikai, Lunar Rescue, Space Invaders ’91, Metal Black, Raystorm, Space Invaders DX, and Akkanvader, with Bonze Adventure, Liquid Kids, Syvalion, and Wild Western along for the ride. A redone menu interface and some bonus materials (like cabinet models and interviews) make for more attractive digs, but be advised: Legends 1 does not include any controller-remapping options, neither Legends supports “tate” mode, and a few of the games suffer from glitches (most notably Metal Black, whose super laser doesn’t work correctly).

Phew...okay, I think that covers just about everything. From here, it’s up to you to decide which among these releases might make a good fit for your collection (one certainly isn’t wanting for options): no matter your preferences, you’ll probably want at least one hunk-o-Taito in there someplace.

Capcom Classics Collection 1 and 2

(JP*/US/PAL, DVD) Not to be (too badly) outdone, Capcom decided to reach back into its own storied arcade era and henceforth offer PS2 owners a sizable sampling: two volumes ended up seeing daylight, each containing around 20 games. Everything on both plays pretty well, and the most essential option tweaks and a handful of extras (like arranged/remixed soundtracks and artwork) are on call, but as with the Taito compilations there’s no way to play at the original arcade resolution (though Volume 2 supports progressive scan), and no tate mode either. Volume 1 (which saw release in all three regions) is essentially all five of the “Capcom Generation” PS1 discs crammed onto a single DVD, plus a few more games for good measure: in terms of shmups, 1942, 1943, 1943 Kai, Commando, Mercs, Gun.Smoke, Vulgus and Exed Exes have all been carried over from there. Borderliners Bionic Commando, SonSon, and the original “Ghosts n Goblins” trio are present too, along with three newly-added shooters, namely “jet pack” blast-em-up Section Z, winged-dude hybrid Legendary Wings,

and “twin-stick” side-scroller *Forgotten Worlds*, which features some can’t-miss Engrish comedy gold during its inter-stage scenes.

For Volume 2, Capcom took a more interesting route: having already exhausted its previous-generation collections, this time the company whipped up a more eclectic mix of games, including several which had never been granted home ports. For some reason there was never a Japanese release of Volume 2, also making this one of the rare occasions on which Western gamers got something of their own to gloat about. In any event, the shmups included are 1941: Counter Attack (the next in that series, obviously), racing-shmup hybrids *Last Duel* and *The Speed Rumbler* (aka *Rush & Crash*), bi-directional side-scroller *Side Arms*, pod-centric *Varth*, fan-designed twin-stick shooter *Eco Fighters*, and finally the triple pack 3 Wonders (aka *Wonder 3*), which features a shmup (“*Chariot*”) alongside a run-n-gun (“*Midnight Wanderers*”, aka “*Roosters*”) and a box puzzler (“*Don’t Pull*”). Other games with shooting elements, if you’re interested, include *Black Tiger*, *Magic Sword*, and *Mega Twins*. Neither of these collections are too tough to find (or pricey when found), so if any of the stuff on them brings back pleasant memories of yesteryear (or just invokes some curiosity) there’s no reason not to treat yourself to a spur-of-the-moment purchase or two...y’know, just this once.

Activision Anthology and Atari Anthology

(US/PAL, DVD) While fancier graphics and deeper mechanics certainly have

their advantages, there's something to be said for keeping things simple...and taking up a minimal amount of data space in the process. Case in point: in terms of sheer volume, nothing could touch the Atari 2600 when it came to PS2-generation re-releases, thanks to nostalgia grabs from both Atari themselves (*Infogrames*, for the sticklers) and Activision. The latter company's package was the first to hit the market, and definitely doesn't skimp on period ambience, modeling the navigation screen after a stereotypical game room of the era (80's rock blasting in the background, of course) – in terms of games there are just under 50 in all, and most everything plays as old-timers remember, though the PS2 controller obviously wasn't built for certain titles and can make for some occasional hassle. The “purest” shmups on offer are *Chopper Command*, *Commando*, *Cosmic Commuter*, *Demon Attack*, *HERO*, *Megamania*, *Moonsweeper*, *Plaque Attack*, *River Raid*, *River Raid 2*, *Seaquest*, and *Spider Fighter*; other titles embodying “shmup-ish” elements are *Atlantis*, *Barnstorming*, *Beamrider*, *Crackpots*, *Dolphin*, *Laser Blast*, *Robot Tank*, *Sky Jinks*, *Space Shuttle*, *Stampede*, *Starmaster*, and *Tomcat*. If you're a fan of the lineup, the unlockable art assets, TV advertisements, send-away patches and other memorabilia only serve as icing on the cake.

A few years later came the “*Atari Anthology*”, an even more expansive trip back in time, stuffing nearly 70 2600 games and 18 arcade titles (with a few overlapping entries between the two) onto that shiny new DVD – in exchange, however, there are far fewer trimmings and extras here than on Activision's pack (a majority of them being somewhat redundant play mode variations for each game). Anyway, here are the shooters you get: on the 2600 there's *Air-Sea Battle*, *Asteroids*, *Centipede*, *Combat*, *Demons to Diamonds*, *Desert Falcon*, *Gravitar*, *Millipede*, *Missile Command*, *Outlaw*, *Space War*, and *Yars' Revenge* (plus *Battlezone*, *Canyon Bomber*, *Missile Command*, *Quadrant*, *Radar Lock*, *Star Raiders*, and *Star Ship* about the edges). Arcade blasters include *Asteroids*, *Asteroids Deluxe*, *Black Widow*, *Centipede*, *Gravitar*, *Millipede*, and *Space Duel* (with *Battlezone*, *Liberator*, *Lunar Lander*, *Major Havoc*, *Missile Command*, *Red Baron*, and *Tempest* to filling things out). This comp is usually a notch or three below Activision's in

terms of numerical ratings, but there's still a pretty good (and inexpensive) amount of stuff on offer to keep classic gamers busy.

Midway Arcade Treasures (Series)

(JP*/US/PAL, DVD) Crossing into the lower end of the PS2's "compilations" pile we arrive at the trio of "Midway Arcade Treasures". The first among them is comprised mostly of material previously bundled on last generation's "Williams Arcade's Greatest Hits", "Midway's Greatest Arcade Hits", and "Arcade Party Pak", and incidentally also contains the most shooters: Blaster, Defender, Defender II, Gauntlet, Road Blasters, Robotron, Satan's Hollow, Sinistar, Smash TV, Spy Hunter, and Vindicators are all on the menu. Midway Arcade Treasures 2, the next in line, adds Kozmik Krooz'r, Spy Hunter II, Total Carnage, and Wacko, alongside Gauntlet II, NARC, Wizard of Wor, Xenophobe, and Xybots. Treasures 3, by far the lightest on content, contains only racing games, though Badlands and S.T.U.N. Runner contain some shooting elements.

In a regional reversal of what occurred with the Taito Memories series, Japan only got a single "Midway Treasures" release (under the rather cumbersome title "The Game Center of USA"), but it's got a higher totally tally of games than any of the Western versions: shmuppers who go for the import get Kozmik Krooz'r, Satan's Hollow, Spy Hunter, Spy Hunter II, Total Carnage, Vindicators, and Wacko, plus Gauntlet, Gauntlet II, Road Blasters, Xenophobe and Xybots all on one disc. For each of these releases the overall selection is solid (if rather limited compared to the competition), but the implementation's on the sloppy side: some games contain slowdown and other issues not found in the original arcade versions (not counting requisite loading times), and the extras are similarly sparse and "low-budget" in nature (if you hadn't already guessed, you can forget about tate mode). While this trilogy might still prove worth a look for longtime fans of the originals, they're not as attractive a package for any other potential customers.

SNK Arcade Classics Volume 1

(JP*/US/PAL, DVD) A late arrival to the PS2's "milk the old-timer scene for all it's worth" feeding frenzy, SNK's cut-and-paste of its arcade heyday is a rather disappointing zombification ritual

of mostly-early (to the point of being severely outdated) titles, a majority of which are already available on other collections to boot. Only one honest-to-goodness shmup made the team, but thankfully it's a decent one: meet Last Resort, a semi-obscure side-scroller "inspired by" R-Type. Collecting powerups, which cycle between "red" and "blue" colorings, equips your ship with a bullet-absorbing gunpod, which can also be charged up and "boomeranged" at enemies: the aforementioned coloration determines whether the launched pod travels along walls or bounces off of them. When firing "normally" your pod will drift and shoot in the direction opposite your current movement, but its position can be handily locked into place (and subsequently released) with a tap of the "B" button – you can also pick up one of two missile types, a laser upgrade, and speed-up (and –down) items to assist you in wreaking maximum havoc. Gritty, detailed graphics (note the little flailing pilots blown out of destroyed enemy crafts) help Last Resort to catch the eye, but reliance on a post-death "checkpoint" system will be enough on its own to put some off – for anyone interested, though, this is the only home port it's received so far, unless you count the Neo-Geo CD. Elsewhere on the DVD you can find Metal Slug, Magician Lord, and Shock Troopers to satiate your non-shmup shooting needs, but there's not a heckuva lot else to recommend the total package: each game is basically a straight-up emulation with minimal options and, at times, extra slowdown or other problems. Artwork, music, and videos are present, but must be unlocked by completing certain in-game tasks to earn "medals" (basically Achievements you can't show off online) – weirdly, though, the rewards and requirements frequently don't line up with each other, meaning that to activate a feature for a particular game you'll need to excel at a completely different title on the disc, quite likely one you'd rather have ignored altogether. Again, there's a home exclusive or two on this comp and it's pretty cheap to find, so you might still want to plunk down a few bills and hope that an improved Volume 2 someday comes to pass. As an odd final note, the PS2 edition of SNK Classics was released in all three regions, but Japan never "officially" got it: somehow the NTSC-J version only hit shelves in Korea.

Namco Museum and Namco Museum 50th Anniversary

(JP*/US/PAL*, CD) You weren't seriously expecting Namco, which birthed a half-dozen-strong set of reissued classics on the PS1, to pass up a similar opportunity on the system's successor – ever eager to saturate the market, two more arcade collections from Pac-Man and Company came to fruition during the PS2's lifetime. The first of these was simply titled "Namco Museum", and only saw release in the US – of its twelve included games, three are (proto-)shmups, namely Space Invaders clone Galaxian, its much better-received sequel Galaga, and eventual update Galaga Arrangement. A few years later a follow-up, Namco Museum 50th Anniversary, was unleashed upon all three regions, and its sixteen-game roster is much more shooter-centric: Galaxian, Galaga, re-revision Galaga '88, early vert-scroller Xevious, its fantasy counterpart Dragon Spirit, and reverse-scroller Sky Kid are all on board, along with proto-run-n-gun Rolling Thunder.

If most of those names look familiar, they should: every shooter present on these comps, save the Galaga revisions, can be found somewhere in the previous generation's "Namco Museum" series (which also feature Bosconian, Gaplus, Ordyne and Dragon Saber as added shmup incentives). Some fans might still be persuaded to pick at least one of these up to have more games in one place, but I still wouldn't recommend it: not only are the in-game options very bare-bones on both, but the galleries and other extra content which helped to round out the PS1 editions are pretty much completely gone (sorry, but the "virtual cabinets" and handful of old radio songs on "50th" don't cut the

mustard). If you're enough of a fan to re-purchase these games in the first place you might as well spring for those older "Museums", or perhaps the "Virtual Arcade" edition on the 360: somehow, though, both 128-bit packages were successful enough to earn "Greatest Hits" versions in the USA, so if you don't mind a quick-and-dirty alternative after all they shouldn't require much effort to bring home.

Tecmo Hit Parade

(JP, CD) In recent years its brand has been most closely associated with ultra-violence and state-of-the-art boob physics (and next up: Dynasty Warriors!), so it's easy to forget that Tecmo's roots do, in fact, reach way back into the early arcade years (anyone remember "Tehkan"?). – the company, for its part, managed to recall the old days in time to publish its own emulated arcade volume, though it's not one of the better efforts out there. Only seven games total are included, two of which are shmups: Star Force (aka Mega Force), which also received an NES port, is the one players are more likely to recognize. The title plays like an unofficial Star Soldier prototype, with speedy enemy patterns, destructible background elements, and some wacky scoring secrets: the sole obtainable powerup increases both your destructive capabilities and your hit area, making it risky to use. Pleiads (sometimes spelled Pleiades), on the other hand, is a sort of spiritual sequel to Phoenix: its basic mechanics are akin to Galaga's, giving you the helm of a ship which can only move left to right as you try to pick off fluttering swarms of Those Darn Aliens. There's no exploitable tractor beam here, but instead the ground is littered with satellite dishes and other stuff, which can absorb some enemy shots a la the barriers in Space Invaders. Upon clearing a wave of hostiles you rocket upwards to battle a second formation before encountering a big ol' UFO boss: vaporize him and you weave back into docking formation before starting the sequence over again. For something a bit more unusual you can also try the oddball "turret shooter" Senjyo: in any case, while the games are solid enough considering their age, many will still find their mechanics somewhat outdated, and there are few on-disc alternatives to play instead. The presence of an image gallery and all original arcade DIP switch options are appreciated, but especially considering that all three regions were granted an upgraded Xbox version titled "Tecmo Classic Arcade", which adds in four more games (including another shmup, Strato Fighter), even devotees of the included material should probably only go the PS2 route if no other options exist.

Oretachi Geesen Zoku (Series)

(JP, CD) Western gamers always have plenty of things to gripe about (sometimes the complaints are even legitimate!), but when our companies decide to re-release old games they at least tend to smoosh a batch of them together and give us a little bit of value for our money. Japan is not always so lucky, as evidenced by budget publisher Hamster's "Oretachi Geesen Zoku" (roughly "Our Local Game Center") series, sometimes incorrectly spelled "Geesen". Each of these twenty-odd releases contains a single arcade classic...and that's it. One un-altered game per disc – no enhancements, no bonus modes, no nothin'. Yes, the retail price is lower than that of a "normal" game and some nice extras were packed in, from media mini-DVDs and soundtrack mini-CDs (some of which featured remixes) to collectable cards and strategy booklets, but juxtaposed with the amount of "core" content available on competitors' offerings these still come up short in the "bang for your buck" department unless you're an enthusiast.

Tate mode is included in all applicable titles (including Time Pilot and Scramble), but controller mapping is MIA and having to manually save/load high scores is a pain. You might even say that these games are akin to what you'd get upon booting up an emulated ROM on your computer...and you'd be more correct than you thought... It was eventually discovered that several of the "Oretachi" discs contained unauthorized MAME code (plus some extra bugs), and all planned future releases (including a rumored Xexex conversion) were cancelled soon afterwards. If you're still interested, some of the shmups featured here have rarely (if ever) appeared on home consoles elsewhere, so here's the full list of them: Moon Cresta, Rabio Lepus (aka Rabbit Punch), Scramble, Sonic Wings (aka Aero Fighters), Terra Cresta, Thunder Cross, and Time Pilot are the "pure" shooters, with Konami borderliners Contra, Pooyan, and Quarth (aka Block Hole) rounding things out. Knowing what you know about them and their origins, it's your call whether any of them might be worth your time and cash.

Space Invaders Anniversary and Space Invaders: Invasion Day

(JP/PAL, CD) Just in case you thought that Taito might be satisfied with the avalanche of Space Invaders entries it forced into the "Memories/Legends" releases, here's a reminder of just what kind of company you're dealing with here: behold Space Invaders Anniversary, a totally separate and series-focused nine-game pack. Well, technically there are nine games here, anyway: six of them are simply tabletop and upright variations of the original black-and-white Invaders, its color upgrade, and Invaders Part II. The remaining trio are (again, technically) all-new, if reminiscent of "bonus" content found on similar last-gen compilations: a cooperative two-player "Doubles" mode, its competitive "Versus" equivalent, and "Space Invaders 3D", which adds an extra graphical dimension plus a few power-ups and a range of (mostly useless) camera angles. While the frontend is stylish

and the memorabilia on display is impressive, the lack of scope on the playable front seriously hurts: you'll sorely miss Majestic Twelve, Akkanvader, Invaders X, and a slew of other, more varied takes on the formula. Anniversary, then, is a fan collectable above all else, a fact driven home by the Japanese limited-edition bundle, centered around a mini cocktail cabinet mockup which you can insert the DualShock into for a truly "authentic" control interface. You have fun with that.

Whoa there bucko, don't get up yet! We (and Taito) are STILL not done: no history of this landmark series is complete, unfortunately, without the ill-conceived marketing department casualty "Invasion Day", also known as "Space Raiders". The idea seems to have been to infuse the brand with a dollop of "Western appeal" (contemporary Japanese game designers, let this serve as a cautionary tale for the next time some chortling "analyst" opens his big yap within earshot), which naturally means replacing the classic player ship with gun-toting action movie rejects, and the even-more-iconic enemy aliens with an anonymous grab bag of slimy, squawking overgrown insectoids...oh, and zombies, gotta have zombies! Don't forget the utterly vestigial story cutscenes and cheese-tastic voice acting, either. The basic "move (sideways) and shoot (upwards)" framework is still intact, despite the perspective's shift to an "uphill" orientation, but most everything else has been reworked in some manner or other: for starters, you now choose between three playable characters with varying strengths (and a life meter), though all have access to a dodge-roll move and limited-use special weapons (in addition to their primary firearms, which are pretty impotent until you power them up). On-field cover (like barrels and cars) can't be shot through anymore, but destroying certain objects will cause an alien-damaging explosion. A scoring system reminiscent of Akkanvader has been carried over, and rewards you for shooting down baddies consecutively without missing: unfortunately, most of your targets take multiple hits to dispatch and don't move in predictable patterns, making such accurate kills a pain to pull off reliably. In its favor, the game is pretty cheap to acquire (especially having somehow rated a reprint in Japan) and not a TOTAL loss in terms of how it plays, but to say the very least most of the series' trademark charm is nowhere to be found. Ocean Commander and Heavy Weapon (PopCap Hits Vol 2)

(PAL, CD/ US, DVD) The budget-priced PC gaming scene is a realm altogether spurned by most "dedicated" shmuppers, and said developers' occasional exploits into the console realm have seldom served to endear genre fans any further: case in point, Cyber Planet's Ocean Commander (aka Underwater Attack). The title's central feature set sounds promising at first: as a side-scrolling "twin-stick" shooter with an unusual underwater theme, you're allowed to aim your submarine's guns in any direction as you move around. What's more, you can buy and upgrade twelve different unlimited-ammo weapons between stages, and all of them can be deployed simultaneously once equipped.

This array of uber-armaments make for a nice power trip at first, but quickly kills pretty much any semblance of challenge in the process: even in later levels, when your portly hitbox and swarms of enemies threaten to cheese you to death, a lengthy life meter and frequent "get out of jail free" power-ups quickly banish any ensuing pressure. This droning cycle of pseudo-activity, coupled with often-repetitive backdrops and opposition patterns, serves to detach the player in a way that no shmup ever should, and the lack of any real scoring system leaves the game with nothing else to fall back on save a throwaway "survival" mode. To its credit Ocean Commander isn't outright broken, and might have even made a serviceable, cheap impulse buy with some additional design know-how applied, but as it stands this one is difficult to recommend, especially on a system with so many superior alternatives.

The news on this front isn't ALL bad, however: casual super-developer PopCap (of Bejeweled, Peggle and Plants vs. Zombies fame) implements a number of Ocean Commander's basic design concepts in its own Heavy Weapon, but handles most of them with a finer touch, making for a much more playable product. While the setup here, despite some background scrolling, is more akin to Space Invaders (since you control a ground-based tank which can only move back and forth), the "twin-stick" controls and purchasable upgrades remain: thankfully, while the firepower is still fun (the mega-laser and nukes especially), it never gets to the point where you can utterly (and boringly) overpower everything. The defensive front is also much more intense, thanks in large part to the wise exchange of a life bar for more traditional "one-hit kill" deaths, though "shield" power-ups grant some needed breathing room. Some increased background diversity is appreciated too, though the enemies still repeat a lot and mode variations are again lacking; the PS2 "PopCap Hits" collection (which bundles Heavy Weapon with PuzzLoop clone Zuma) contains a "making of" feature and some "tips from the masters", but misses out on the HD resolution and other additions it's since received elsewhere. Seeing as the game is widely available on better-suited formats, this non-optimized edition comes across as rather redundant.

Fren-zE

(PAL, DVD) This one might not really "count" in the eyes of some readers since it wasn't a commercial release, but for completeness' sake I'll give it a quick mention. If you haven't played Fren-zE it's a simple "homebrew" vert-scroller with a graphical style somewhat reminiscent of Kenta Cho's work – play-wise you destroy enemies to earn point items, defeat bosses to power up your lone weapon, and that's honestly about it. One certainly can't complain about the cost of admission, though – the full game debuted on the freebie demo disc packaged with issue 54 of Official Playstation 2 Magazine in the UK, accessible via a menu code (issue 55's pack-in features Fren-zE as well, though this time it's selectable right from the main menu). Since then the title has received an (also free) downloadable PC release, which adds an extra level, improves the presentation, and implements a limited-use "shield" mechanic, thus rendering its PS2 sibling somewhat obsolete, but the original discs aren't bad collectibles if you can get your mitts on them.

Thunder Force 4

Thunder Force 4 aka Lightning Force [sic] is a strong contender for the title of best Genesis/Mega Drive shooter. This is Techno Soft's third entry of the series for this console (and the last sprite-based one). Like the previous Thunder Force you can choose the order you play the first stages in. The power up system also references the third game, you start out with two basic weapons which you can upgrade and slots for other weapons that can be picked up. Techno Soft once again weaves some developer magic to create the game's visuals, which are stunning to say the least. If you want to show off how great the Genesis/Mega Drive can look, here is the game to demo. Another aspect of Thunder Force 4 that makes it a great shooter is the soundtrack. Unlike other Genesis/Mega Drive shooter gems (M.U.S.H.A., Eliminate Down), Thunder Force 4 will not cost you an arm and leg to own, copies go for a relatively affordable amount online.

Eliminate Down

Eliminate Down stands among the best of the Genesis/Mega Drive shmups. The game is only available as a very high priced import. It is developed by an obscure company called Aprinet and published by another unknown company called Soft Vision. The developers here managed to create a game that is a gem on Sega's platform and an essential title to play for any shmup fan.

Eliminate Down is comprised of eight levels. The game scrolls horizontally and features a graphically detailed sci-fi setting. In fact the visuals are one of the first noticeable features about the game. The graphics sport a high degree of detail, especially by Genesis standards. The gameplay is fast and the difficulty is high, but not impossible. Eliminate Down shines by having constant action, creative mini-bosses and bosses on every stage, and a good soundtrack.

Eliminate Down does not rip off from its predecessors, but instead manages to conjure up major fights and attacks that feel fresh and interesting. The only criticisms that one might have are against an annoying sprite flicker that can occur when the action heats up and that some of the sound effects can get aggravating after hearing them for over twenty minutes. These minor points aside, Eliminate Down epitomizes the term "rare gem" and should be discovered and enjoyed by any shooter fan.

M.U.S.H.A.

M.U.S.H.A. often ranks high on top lists for Genesis/Mega Drive shooters. The game has a strong reputation which it earns through great sound, graphics, and gameplay. The English title is actually an acronym for Metallic Uniframe Super Hybrid Armor. It is a vertical scrolling game with seven levels and a solid soundtrack; M.U.S.H.A. itself is a part of the Aleste series by Compile (hence its original Japanese name, "Musha Aleste"). You play a character in a mech (as opposed to a space ship) with the ability to pick up smaller ships to accompany you as power-ups. These smaller ships can take damage for you and fire in a variety of methods. This game is beautiful and it plays great. M.U.S.H.A. is a must-play game for any shooter fan and anyone looking to experience one of the best titles on Sega's console. If you are looking for a copy of the game to add to your collection it will cost you. The original cart is rare and goes for high price (always near the top of our Rarest & Most Valuable Genesis/MegaDrive list) when it is put up for sale, especially a CIB copy. However, if you want to own the classics of the Genesis/Mega Drive shooter library, M.U.S.H.A. is required title.

Thunder Force 3

Several complaints that people often have with Genesis games versus Super Nintendo usually involve criticizing the sound and graphics. Technosoft proved themselves to be magicians with Sega's console and with Thunder Force 3 they delivered a game that graphically and aurally rivals most SNES games. This game is among the best on the system and one of Technosoft's top works. What makes the game succeed is how polished virtually every aspect of it is. The visuals in the game are among the Genesis/Mega Drive's finest; there are graphical effects here that you will not see in any other Genesis title. Gameplay is smooth (I can't emphasize that enough) and the bosses are big. The game is challenging, but does not get frustrating. A bit of practice and patience is all it takes to win. Thunder Force 3 is arguably one of, if not the best, shooters on the console. It is highly recommended and an essential title to own for any Genesis shmup collection.

Steel Empire

Steel Empire is a Genesis shmup with a good amount of character. It handles all the necessary gaming aspects very competently; controls, pacing, sound, and graphics. What sets this title apart from the rest is the unique choice of color palette and art style. This game was steam-punk before steam-punk was cool and the graphics have a rusted look to them (which, by the way, is not a criticism). Steel Empire has seven stages of horizontal scrolling; to get

through them you have a choice of a zeppelin or an airplane which is basically a dichotomy of slow-with-a-lot-of-health versus fast-with-less-life. Steel Empire is solid throughout, the art style, unique design of the levels, and enemies make the game stand out above the typical space ship or fighter plane shmup fare. The game can get tough at times, but thanks to the inclusion of a health bar Steel Empire keeps itself from getting "Gradius hard" which make this game a shmup worth checking out.

Gynoug

Gynoug / Wings of Wor is a hectic rapid fire shooting game that, at times, feels like a bullet hell title. You play a winged character who flies horizontally through the levels, similar to side-scrolling levels from Legendary Wings on the NES. The game consists of six stages with a healthy dose of enemies and big end bosses. The power-ups system is not overly complex, one color orb gives you a wider shot and another makes those shots stronger, You can also collect bombs which will be vital to surviving some of the harder levels. The game has unique enemies on every area and some great effects like a rocking effect that can give you vertigo. Overall, this is another great shooter that fits in well to any shooter collection. Thankfully, obtaining a copy will not cost arm and leg, the game is fairly affordable.

Gleylancer

Gleylancer is a title that never had a release outside of Japan until Nintendo brought it to the virtual console in 2008. The game is good and definitely worth owning due to the fact that it is very playable despite the language barrier (and like many popular retro imports, an original cart will cost you). The game starts with a great cut scene introducing the player to the main character; you are a young girl on a mission to save your father. You commandeer the best ship you can find and you're on your way. There is nothing here that is revolutionary, but it's a fun game. You have two orbs that accompany you and can behave in a manner that you define at the beginning of the level. The game has nice levels and two endings depending on whether or not you can save dad on the last stage. Another solid entry to the Genesis/Mega Drive library of shooters!

Elemental Master

Techno-Soft arguably had their best years making Genesis/Mega Drive games. While not as well known as the Thunder Force series, Elemental Master stands as a worthy addition to their catalog of games. For this title the developers decided to break away from the science fiction themes of Thunder Force and Herzog Zwei and instead draw upon fantasy elements for the game's visuals. Elemental Master is a top-down shmup where you control Laden, a sorcerer trying to stop the evil King Gyra. The game opens up with an impressive cutscene which lays the foundation for the plot. It is revealed in a twist that the game's antagonist is none other than your own brother,

possessed by darkness.

The player takes control of the game after the introduction. The first half of the game is broken down into four selectable stages, each representing an element and a corresponding power-up that is gained after the level's boss is defeated. The default weapon available at the beginning of the game is a standard parallel two-beam shooter. Unlike many other shmups all the different weapons are permanent and cannot be lost once gained. The four elemental power-ups can be charged up to release an explosive blast; the main default weapon becomes chargeable after the first four stages are completed, which gives the player the game's most powerful weapon. Other helpful items are scattered throughout the journey including shields, multiple shot, and energy to replenish your health bar.

The gameplay involves you controlling Laden by moving in any direction on a vertical scrolling map. The levels are designed to look like different landscapes, each offering various non-lethal obstacles (and, of course, tons of bad guys). Laden can fire any selected weapon up or down. Graphically Elemental master does not shine as brightly as Techno Soft's other two shmup masterpieces, Thunder Force 3 or 4, but it does not trail them by much. The bosses are huge and the game's soundtrack is among the Genesis' best. Some may say the game is too easy and I agree, unless the game catches you sleeping you won't have too much difficulty navigating through. Difficulty is still balanced pretty evenly and increases mostly on the last three stages; everything flows well enough that it never gets boring.

The US version of Elemental Master was published by Renovation. It's a great addition to any shmup or Genesis collection. The game is not too uncommon and copies can be picked up on the cheap. Also Japanese copies of the game seem to be almost as abundant as their US counterparts; being a shooter with little Japanese text in the actual game, Elemental Master had a good number of copied imported when it was released in Japan.

Super Fantasy Zone

If you are a fan of the classic Sega franchise Fantasy Zone then you are in luck, unless you live in North America. Super Fantasy Zone is a 16-bit entry into this classic Sega series, the game received a release in Japan and Europe, but not North America. Nintendo rectified this by releasing it for the Wii's virtual console in 2008. If you are familiar with how Fantasy Zone plays, there will be no surprises here. The game lets you roam freely left or right, like Defender, and it features bright colorful graphics. Like its predecessors there are shops that can be found throughout the levels that gives you temporary upgrades. Unless you count Keio Flying Squadron on the Sega CD, Super Fantasy Zone is the best option available for a bright colorful shooter on the Genesis/Megadrive.

Gaiares

Gaiares is horizontal shmup released stateside by Renovation. Among the large amount of Genesis shooters, Gaiares rests relatively high among the bunch. The developers had no problem using the console's color palette to generate some excellent looking visuals. This is highlighted in the boss fights at the end of the game's eight stages. Each one is massive and fills up a good portion of the screen.

What really sets Gaiares apart is the power up system. Following your ship is a Gradius-like option, but unlike Gradius you can launch it at an enemy and gain their unique type of firepower; repeated launches into the same enemy equals a more powerful version of said weapon. Gaiares is not easy, it'll give any gamer a good challenge and will probably not be completed on the first playthrough. The game is not uncommon and can be tracked down relatively easily but a CIB version, while not as pricey as some import Mega Drive shmups, might require a bit of extra coin.

Truxton

Toaplan! Truxton (known as Tatsujin in Japan) was an early release for the Genesis/Mega Drive, hitting shelves not long after the debut of the console. It is an arcade port that I remember being one of the games used in European advertisements to show off how much more advanced the Genesis/Mega Drive was over the 8-bit NES. The game

still looks great and it will ooze nostalgia to anyone who paid attention to Sega's 16-bit console in its early days. It's not the best-looking game on the console anymore, but that's excusable due to the fact that it was an early release and based off of an arcade game. Even though all Genesis/Mega Drive shooters are technically retro and old school, Truxton feels a bit more classic than the rest. The game comes highly recommended to anyone that enjoys old school shooters with an arcade feel. The arcade-exclusive (save the Japan-only FM Towns computer system) sequel is great too.

Raiden Trad

Raiden is a classic shooter franchise. As of this writing it spans four official releases and various spinoffs. Raiden Trad is a modified version of the first arcade game released for the SNES and Genesis/Mega Drive. The game is not a visual masterpiece, but Raiden is a franchise that has a standard of quality among shooters; this entry in the series helps to establish it. There are eight vertically-scrolling stages that move along at a slow to medium pace. Raiden Trad lacks the fast-paced rush some shooters can give you, but that's perfectly fine. There are two types of weapons to upgrade and (of course) large, devastating bombs. Like Truxton, this is an old school game that feels a bit older still than the rest of its contemporaries. The best part about it is that if you want to own a copy it's rather common and affordable!

Bio Hazard Battle

Bio Hazard Battle starts by letting you pick one of four “ships” to play. They all seem modeled after something aquatic, in fact the whole game’s aesthetic features a biological/oceanic theme which makes it visually unique among the typical ‘space ship in space’ shooter. The game overall is good, if not great. The uniqueness of the enemies and the stages is what puts it a notch above other such shooters. The four ships each have advantages and disadvantages over the other ones and there are plenty of power ups to find throughout the game’s eight stages. Bio Hazard Battle (or its more oddly-named Japanese edition, “Crying”) is common to come across and fits in well with any shooter collection.

Sub Terrania

Sub Terrania is a shooter with a twist to the usual horizontal and vertical scrolling. The game gives you free range to move, but it also imposes heavy restrictions on you. Mainly, you have to manage your fuel. Each stage has a set of goals that does not necessarily just consist of killing a boss, often times you will find yourself rescuing hostages a la Choplifter. If you are craving a typical on-rails shooter where you only have to worry about dodging and shooting, Sub Terrania will get very frustrating very fast. If, however, you have an idea of what you are getting into and you take the time to master the thrust mechanic Sub Terrania can be a very fun game.

Granada

Wolf Team is a defunct game developer that had was quite prolific during the Genesis/Mega Drive years. Thanks to publisher Renovation, gamers outside of Japan were able to play some of their great titles (as well as great games by other Eastern developers). This may be a point of contention, but neither Wolf Team nor Renovation had their name on many games that would be considered classics or must-haves for Sega's 16-bit console.

They were, however, two great companies that brought over a lot of good games that helped the Genesis/Mega Drive stand out from its competitors and expand its library to include unique games found nowhere else. Now, Granada is one of those games. It does not have the legacy that Sonic or Zelda has, but it's downright fun. This game is not a typical scrolling shooter, but instead it plays like a twin stick shooter before consoles could do twin stick. You can roam freely on the stage and your goal is to kill the bad guys and the things that spawn them (not unlike Gauntlet). You fire in the direction you're facing and you can hold a button down to continue firing in that direction while moving in different ones. This is how the game creates its twin stick feel. The game is not a system-seller, but Granada is great mindless shooting and definitely worth playing.

If you made a three-category list of Genesis shmups which included best, middle, and worst, Verytex would likely be at the top of the middle list. There is nothing wrong here; Verytex is a pretty vanilla shmup developed by Operahouse and published by Asmik which never saw a release outside of Japan. It has some things going for it, but in contrast to the Genesis' hefty shmup catalog it fails to shine too bright.

The game is comprised of six vertically-scrolling stages. The graphics are decent and its soundtrack ranks slightly above average. There are three weapon types, missiles and shield power ups, nothing too extravagant. The one issue with the game that can cause frustration is inconsistent difficulty and a few cheap shots that will be thrown at you. For example, in some levels of the game enemies will spawn behind you with no warning, killing any player hugging the bottom of the screen. Some levels are simple and can be beaten on the first try while others may take a few attempts. The part that really amps the difficulty, of course, is the end boss. On its last incarnation the final enemy goes into nightmare mode and becomes a series of eyes shooting non-stop heat-seeking fire and fast moving lasers that can hit almost every inch of the screen. The game does not allow you to continue where you died, but instead at mid-points in the level; the final boss is no exception.

These faults don't break the game, Verytex is worth playing and if you are going to spend the money on an import shmup for your Genesis, Eliminate Down would be a better choice, but if you already own that Verytex makes a good addition to a Genesis collection.

Slap Fight (also known as Alcon) might have some value to collectors since it was only released in Japan. This game, released by Tengen for the Genesis/Mega Drive, feels very much like an arcade game (which should be no surprise because it is a port of one). Slap Fight is a vertical shooting shooter that will look a bit aged on the Genesis when you compare it to other games released at the time. The power up method appears borrowed from Gradius, but the game does offer some nice things beyond that, like having multiple ships attach to you in a Galaga-like fashion. Similar to Raiden Trad, Slap Fight does not visually blow you away, but it does capture that arcade feel that shooters developed specifically for consoles just don't have. It's not a handicap for those other games, just a different type of gaming experience. If that statement makes sense and you enjoy that arcade feel replicated on a console, Slap Fight will be worth your time.

Sagaia

Sagaia is decent shooter that is faithful to the Darius series (except for the name of the game; for some reason "Darius 2" didn't cut it for the title of the game so it was renamed. The same anomaly occurred for "Lightening Force"). For Sagaia you get to choose your path after each level which gives the game a lot of replay value. The levels all branch off from the previous ones; you can finish the game without having seen most of it. If you ever played the arcade game this is based off of you will miss the massive letter boxed screen, but if you don't have that as a point of reference Sagaia is a fun and very challenging game. In typical Darius fashion the robotic fish themes are littered through each level. The game falls short of the brilliance that the 32-bit Darius games are, but it's still a good title to play.

Dangerous Seed

Dangerous Seed is an arcade game developed and published by Namco that was ported to the Mega Drive for a Japanese-only release. The console version deviates from its arcade counterpart a bit, but it still manages to bring an arcade feel to the system; something that the large Genesis' shmup library doesn't have too much of. The game is long, it's comprised of 12 levels at about a medium difficulty. Dangerous Seed uses an interesting ship mechanic where at different stages you get another ship attached to your own which (depending on how you arrange them) affects how you fire. They also each have a health bar.

Most of the enemies are the same with little derivation. The various bosses are big and usually their most lethal attack is them quickly lunging at you, not a spread of bullets. Overall this is a good little import shooter for the Mega Drive. It falls short of great by being a bit monotonous and graphically average, yet really never fails anywhere else.

Master of Weapon

Master of Weapon (Taito's error, not mine!) is yet another Japan-only shooter. The game is an arcade title made by Taito. It features a gun and bomb mechanic similar to Xevious where you have one weapon that can only hit aerial enemies and one solely for ground units. Unlike Xevious, the game is fast-paced. The graphics range from average to good and the difficulty is solid. The boss fights can drag a bit which can result in a loss of interest for those with short

attention spans. Otherwise, it's a solid vertical shooter with a good arcade feel.

Twinkle Tale

Twinkle Tale is a free-roaming shooter that some people might say is not a real shmup. Regardless of how you make the distinction, this game will satisfy your urge to gun down 16-bit enemies. Twinkle Tale looks great on the Mega Drive and its gameplay makes me think of Elemental Master, but with less restrictive movement. Every stage in the game is diverse and forces you to navigate through various rooms and environments; it is not on-rails so you will not be forced to constantly move vertically or horizontally. Twinkle Tale manages to keep itself interesting throughout each stage; one level even has platforming elements (minus the jumping) in a scenic sky setting. Twinkle Tale never got a release outside of Japan (but it did receive a fan translation) and it can get rather pricey for import copies.

Whip Rush

Anybody that has a healthy Genesis collection most likely has a few Renovation titles floating around. They were a

great publisher that provided a variety of niche titles to the Genesis crowd. Whip Rush is one of the shmups they brought stateside. The game is comprised of seven mostly-horizontal scrolling levels: by “mostly” I mean the game does not always move left to right, some parts of the level will scroll down into a body of water, or in every cardinal direction through a labyrinth-like stage. The presentation features average Genesis-caliber graphics that appear cartoony at some points due to (what I imagine is an intentional) lack of detail. The sound effects show the worst side of the Genesis’ sound capabilities; they can get irritating fast, usually when the ship is firing. In typical shooter fashion there are a few different shot types that can be powered up by getting the same type repeatedly. Having a weapon that can fire behind you is essential to beating the game. Whip Rush also has one of the most varied speed controls I have ever seen in a shmup

Criticisms aside this is a competent little shooter that does little wrong. There is an effort by the developers that shows in the game, from the initial cut scene to the ending. The boss fights may irate some due to the bosses having a hitbox that has limited exposures, but there are more than a few innovative and difficult challenges to be found there. Whip Rush may be generic, but it definitely has its charm and is worth checking out.

Phelios

Phelios features the Greco-Roman God Apollo flying on Pegasus in attempt to save his significant other, the goddess Artemis. This is a vertical scrolling shooter that isn’t bad in the slightest. It is reminiscing of Legendary Wings, at least the portions of it where the character(s) are scrolling vertically. Phelios is a port of an arcade game of the same name released by Namco. This is from an era when the arcades were still ahead of console hardware, so it’s no surprise that the port lacks the graphics and details of its arcade counterpart. Phelios loosely bases itself off of mythology for its visual themes and style. And despite the game’s graphics falling short of the arcade version, this Genesis/Mega Drive title is still a nice looking game with a good amount of color. For the price this usually demands (not much) Phelios is worth adding to a shmup collection.

Battle Mania 2 / Battle Mania Daiginjō

Battle Mania Daiginjō is the sequel to Trouble Shooter (as it is known outside of Japan) and it's a game that never left Japan which is a shame because it is much better than its predecessor. Like its prequel you don't play as a ship or airplane, but as a person (or persons) flying through the air and shooting. This setup and its mix of both horizontal and vertical scrolling gives the player a good change of pace from more traditional shmups. The controls are very responsive and tight and the game has solid pacing throughout. Because of its more unique play structure, it is a bit of a cult classic within the Japanese Megadrive library.

Curse

If you enjoy retro shooters and importing games (assuming you are not Japanese) owning a Genesis/Mega Drive could be a very rewarding experience. Curse is yet another shooter that never saw the light of day outside of Japan. This game sits right on the bell curve for me in regards to Genesis/Mega Drive shooters. Some of the visuals are nice and it's not broken, but it feels a bit sluggish. Your ship does have a shield (aka energy bar) that reduces frustration when you make a careless mistake. Overall, the parallax scrolling is nice eye candy and if you are looking to grow your gaming collection you could do a lot worse than Curse.

Aero Blasters

Aero Blasters is a game developed and published by Kaneko. It is an above-average shmup that was ported from the arcade (where it was known as "Air Buster") to both the Genesis and Turbografx. Of the two console versions the Genesis has the better graphics; in fact the game looks great all around. Kaneko managed to take advantage of the Genesis' color palette and made a shmup that is as colorful as some Super Nintendo games.

The game is a basic side-scroller. It features a limited number of power-ups that really contribute little, the one main fault of the game in my opinion. The stages are varied, starting in a beautiful metropolis (which you watch get decimated) and ends in a fortress. Aero Blasters features plenty of the dodging and shooting you'd expect, Kaneko did, however, add some variety to keep the player interested, though not everyone will agree with all of their choices. On stage two the play will be forced to move at full blast-processing speed through a variety of corridors that take twitch reflexes or memorization to navigate through. Stages three and four change the game physics to mimic zero gravity, and stage six has Ikaruga-like maze elements.

This game is worth checking out if you are going to explore the Genesis' shmup library. It's a competent game that offers a good challenge without getting frustrating. While everyone may not agree about Aero Blasters being a great game, few shmup fans will call it a bad one.

Undead Line is a tough game that plays a lot like Elemental Master. This is yet another title to add to the list of Japan-only shooters for the Mega Drive. You can choose the order you play the stages in and each level has its own motif, a cemetery, forest, etc. There is a mid-boss and end boss for each stage along with a variety of chests containing power ups to help you out (like a very valuable shield). The game doesn't look too bad and the end bosses are typically huge (although they often lack a significant amount of animation). The game will require practice to beat due to the fact that it can difficult at times. If you are not interested in hard gameplay there are difficulty adjustments in the options. Undead Line is a good title that falls short of being great. It's a good game to own, but only if the price is reasonable.

Vapor Trail: Hyper Offence Formation

Vapor Trail began as an arcade game by Data East and was ported to the Genesis/Mega Drive by Telenet Japan. Renovation saw fit to bring the title stateside. The console port is faithful to the arcade; the game itself is a vertical shooter that puts the player in the cockpit of one of three different fighter planes. Vapor Trail is a competent game and a fun shooter that features a power-up system based on four weapon types and a shield which takes the place of a bomb that is used in many shooters. Strangely, the game got a sequel in the form of a horizontal mech shooter that was released to the arcade, PSX, and Sega Saturn called Wolf Fang: Kuhga 2001. Following that the series went

back to vertical shooting with another sequel called Skull Fang.

Hellfire

Hellfire, as the name suggests, is one of the more difficult games on this list, but it's also one of the most under-appreciated. The name references the most powerful weapon that you have at your disposal, but it might as well be an ode to how tough the game can be, especially in the later levels. Initially a port of Toaplan's arcade version, Hellfire holds up very well even to this day. It's one of the better-looking and sounding games on this list, despite being released in 1990, and it retains the same solid gameplay that made it a popular arcade title in the late 80's. What sets it apart from many shmups is the shooting mechanic, which allows you to choose one of four directions (forward, backward, vertical, four-way diagonal) to shoot in with the press of a button, and it works very well. It's not one of the most well-known Genesis titles out there, but it's worth a look, especially if you've played the rest. If you can find a CIB version, you can expect to pay at least \$40.

Forgotten Worlds

Forgotten Worlds is an arcade game by Capcom that got a port to a variety of consoles. The game does not follow the traditional shooter formula. You can play a one or two-player game, the two playable characters are beefy unnamed tough guys armed with BFGs. The gameplay for Forgotten Worlds is unique due to how you fire. Your gun can be powered up with several upgrades, but you don't just fire forward in this horizontally scrolling game. Two of the gamepad buttons will allow the character to rotate themselves in a circular motion thus changing the direction they fire. One button rotates right and the other to the left. Upgrades can be bought in shops that appear throughout the levels. Forgotten Worlds is fun game, though the transition from the arcade's twin-stick mechanics to the Genesis pad might be too much to overcome for some. If you can get comfortable with the rotating shooting mechanic there is a very enjoyable gaming experience here.

Fire Mustang

Fire Mustang is a port of the arcade game USAAF Mustang released by Taito exclusively for Japan. The game is a side-scroller that takes place during WWII. The game takes some liberties with its history, but most people don't play 2-D shooters for a history lesson. Oddly enough, this Japanese-developed game put you in command of a US Air Force P-51 Mustang, you fly horizontally through the game fighting off the Germans and Japanese. Shooting consists firing a direct shot forward (or multiple forward shots depending on your accumulated power-ups) and bombs that will fall to the ground. The game is competent and worth playing if it can be found for a reasonable price. If you are going to import only one shooter for the console, this wouldn't be the top choice.

Fire Shark

Toaplan! This is another Toaplan game that made its way to the Genesis/Mega Drive. Fire Shark is a sequel for the shooter Sky Shark (an arcade game ported to a variety of platforms). One way to imagine Fire Shark is like Truxton if it had a WWI theme; the games have a very similar feel to them. Fire Shark is not incredibly difficult, but you do have to be careful since your airplane can only take one hit. Luckily, Fire Shark got a multi-regional release and it can be bought for a reasonable price tag online. The title comes recommended for that reason to collectors, if you are looking for a decent shooter for a rainy day you could do a lot worse.

Battle Squadron

You can look at some games and know right away that they are Amiga games. EA was kind enough to bring a handful of PC/Amiga games to the Genesis/Mega Drive and Battle Squadron is one of them. Like many Amiga games this was not developed by a Japanese development team, but a Western one. That's not necessarily a bad thing, but anyone who has played a good variety of shmups will be able to immediately feel the difference between a Western-made shooter and an Eastern one. This is not the best shooter for the Genesis/Mega Drive, but it is unique. It is difficult to find this kind of shooter experience on a console and for that reason alone Battle Squadron is worth owning, especially if you are a fan of games along the lines of Tyrian.

Twin Hawk

Even more Toaplan! If you have played Truxton and/or Fire shark you will be right at home with this shooter. Twin Hawk is a WWII-themed shmup developed by Toaplan and released by Taito. It was originally an arcade game that got a Mega Drive release for Europe and Japan (not North America, unfortunately). Like 1942 you play as a warplane that is in charge of decimating waves of enemies. Unlike 1942 all of your foes consist of tanks and boats. This is a unique feature of the game that isn't a fault, it's just a bit odd compared to the plethora of other WWII-themed shooter. Another unique feature of the game is that instead of having a bomb, you call upon additional planes to fly with you and shoot at whatever is in front of them. They are pretty weak overall and similar to the stone centurions you can free in Kid Icarus with the mallet. Still it is an interesting way to do a special attack. The game is not exceptional, but a good title for any shooter or Toaplan fan; since it is not highly priced, it's a welcome addition to any shooter collection.

Bio-ship Paladin

Bio-ship Paladin, or “Gunship Gomora”, was released in 1991 on the Mega Drive, a year after it had made its debut in the arcades. It’s a pretty standard shmup in most regards, with the story revolving around the attempted destruction of a city by a fleet going by the name of the Aggressors. It’s your job to pilot the Paladin and stop the alien horde over ten levels. You control a standard gun which fires directly in front of you, but you also get a second weapon that can be used with a crosshairs for more accurate shooting, and a laser which is accessed by holding down the shoot button. The difficulty of the game is lessened a little bit by the power-ups that are available, including enhancements to your armor, which also increases your ship size, speed boosts and attachable weapons. The game looks good, with colors that really pop and stand out, and while the audio is mostly forgettable, it never gets on your nerves. Multiplayer is also available, with two players working together or competing against each other for points. The framerate slows down at times when there’s a lot going on, but for the most part, it runs quite smoothly. If you can find a copy, it comes recommended.

Sol-Deace

Sol-Deace is not a bad game, but it is a “meh” shmup for the Genesis. The game was brought to the states by Renovation and made by Wolfteam. For Sega’s consoles it exists in three versions, the cartridge, the Sega CD, and the Mega CD (the latter two bearing the name “Sol-Feace”). The cartridge version is a port of the CD version and the Western and Japanese version differ from each other mostly in sound. The voiceovers are done in accordance to the region’s particular language, but for some reason the makers of the Sega CD version did not use the CD for some of the sound effects that the Mega CD did; there are bits of the game in the Japanese CD version that produce sharper and better audio effects as opposed to Sega CD version which got its sound effects from the Genesis console. This aside the game is an alright seven-level horizontal shmup. The power ups are weak and the graphics okay. If you have access to a Sega CD definitely get that version if you are going to give the game a go, the saving grace of this title is the soundtrack. Sol-Deace feature some of my favorite game tunes with some really standout tracks. And luckily for the game, a shmup with a great soundtrack gains a lot more playability.

Trouble Shooter

Trouble Shooter stars two young heroines, Madison and Crystal as they attempt to stop the bad guys and rescue a hostage. The game is decent enough, if you are looking for something spectacular look elsewhere. Trouble Shooter does manage to distinguish itself from other Genesis/Mega Drive shooters by featuring two jetpack-wearing females instead of a space ship. You can choose your weapons at the beginning of the level and you have the ability to have both girls focus their aim forward or one fire backwards and one fire forward. Trouble Shooter is not a very difficult horizontal shooter. The Japanese- and Korean-only sequel improves on the formula quite a bit.

Task Force Harrier EX

Treco would release a handful of gems for the Genesis/Mega Drive including the only North American release of a Langrisser game (Warsong). Task Force Harrier EX is one of several shooters the company ported from the arcade to the Genesis/Mega Drive. In this game radical Communists have a new bomber that could destroy the free world and only you and your Harrier jet can stop them. This is not a game you play for colorful graphics. It's a vertical scrolling shooter that doesn't look as good as its arcade source, but it can give the player some enjoyment. You have a main attack for flying enemies and a bomb for ground units. The power ups mostly revolve around two smaller ships that flight adjacent to your Harrier and they can be aimed in various positions. Overall, it's an alright shooter that is not

broken and available for a relatively cheap price.

Grind Stormer

This was a late release by Tengen in the Genesis/Mega Drive's lifespan. It was developed by Toaplan for the arcade and is ported to the Genesis/Mega Drive by Tengen just like Slap Fight. Unlike Slap Fight, Grind Stormer did get a release outside of Japan. The port has been criticized as being a poor representation of the arcade version, if you can separate the title from its source you have a decent game here. It's not without its flaws, mainly a lack of polish that other games (Thunder Force 4, Eliminate Down) proved were possible on the console. This is not the best shooter around, but if you are a collector or a Toaplan fan then it's worth tracking down. Copies of the games are not outrageously priced, but it will cost you a bit to own.

Insector X

In this bug-themed horizontal shooter you control what can best be described as a giant mechanical wasp armed with a forward cannon. There's nothing wrong here with the game, Insector X is a competent-enough game that doesn't have anything broken within it, but overall the game is just average. The graphics aren't terrible and the environments are interesting for the most part. In traditional shooter form every level ends with a large boss, in Insector X they will be modeled after an insect or arachnid. The game originated as an arcade title (whose visuals and sound were much more cartoony in nature), and found it's way to the Genesis/Mega Drive by the way of Sage's Creation. The game doesn't cost much so it does come recommended if the price is low enough.

Mega Swiv

The best part about Mega Swiv is the two different control options. Players have the choice between a helicopter (which can fly over certain obstacles) and a jeep (which can shoot in multiple directions), and both can be used at the same time when a second player comes aboard for co-op play. The story is pretty standard for the time, with you being sent in to eviscerate a group of bad guys who have stolen military equipment, and plan to use it on the rest of the world. It's your job to make sure it doesn't happen, and while the story doesn't represent anything great, it doesn't get in the way either. It's a pretty run-of-the-mill shmup, and the visuals aren't anything fantastic, but the co-op is solid and the different play styles add a little variety to the experience.

Arrow Flash

As a general rule, shmups are usually known as being for hardcore gamers who love a challenge. Arrow Flash, released on the Genesis exclusively in 1990, is the exception to that rule, but that doesn't mean there isn't some value here. The game lets you switch on the fly between two different ships, a smaller one and a robot-like transformer. They both typically play the same, but some players might prefer one to the other. Due to the comparatively tame nature of the game, it's a perfect introductory title for those who are interested in the shmup genre, but haven't really explored it to the level that others have. The visuals are decent, but the sound definitely needs some work. The one thing that really frustrated me about the game was the need to continually press the shoot button to fire, instead of being able to simply hold it down. It's not the most widely available game out there, but if you find one, you can expect to pay \$15- \$45 based on condition and completeness.

Thunder Force 2

Thunder Force 2 was one of the launch titles for the North American Genesis in 1989, and while it's not as revered as its sequel, it's still a quality game that should be in the collection of any shmup fan. The game alternates between top-down and side-scrolling stages, and while the top-down levels are decent, the game really shines with the side-scrolling. Obviously the developers agreed, as when the sequel was released the following year, the overhead

portions were completely removed in favor of pure side-scrolling. You have two options for weapons, with a more powerful one that shoots just straight ahead, or a secondary option that shoots forwards and backwards at a reduced level. The opening level starts off easy enough, but the difficulty spikes once the second area begins and becomes increasingly difficult throughout the game's nine stages. Being a launch title, you can forgive the slightly below-standard visuals and audio, but it does take away from the game when looking at it now almost 25 years later. It set the stage for arguably the best shmup on the system, and even though it's not as good as TF3, it's still a must-have for serious collectors and players.

Atomic Robo-Kid

Atomic Robo-Kid started as an arcade game and it was later ported to nearly every console that would take it. If you are looking for fast paced shooter action, you're in the wrong place. This game is slow (as in, you have to scroll the screen manually), sluggish, and difficult. Atomic Robo -Kid is a one-hit-you're-dead horizontal shooting/action title. This game may float some gamer's boats, but overall I see it having a hard time finding a large fanbase. The title isn't broken in any way, there are just a lot of other titles on the Genesis/Mega Drive that will offer more immediate gratification.

Zero Wing

If you are familiar with the “All Your Base” internet meme, this is the game where it comes from. Besides the infamous poor translation what else does this game have going for it? Zero Wing is a Toaplan arcade shooter that was brought to the Mega Drive in Japan and Europe, but not the States. This is not Toaplan’s best game, but it is not a train wreck either. The port is very close to the arcade version and it looks decent graphically. One interesting aspect in the game is a tractor beam that you can use to grab and throw enemy ships. This may sounds great, but it doesn’t enhance the game too much. In fact it seems a lot better in writing. Ultimately, all the feature does is pull and throw small baddies, not anything cool like the weapon-stealing beacon in Gaiarex. Overall, due to the import price tag (for North Americans) Zero Wing is a game that is best left to collectors who are completionists and people who are interested in it just for novelty’s sake.

Viewpoint

Let’s get one thing out of the way off the top: Viewpoint is much better on a Neo-Geo arcade unit than it is on any other platform, but that doesn’t mean you should ignore it on the Genesis. The gameplay is a pretty faithful rendition of the arcade version, with the full complement of weapons and power-ups present throughout the game to go along with a varied enemy and obstacle set. Of course, the original did present more enemies than the Genesis title

does, but if you've never played the original, that won't matter. When it comes to the visuals, you're playing from an isometric (or "¾") perspective, and despite the obvious step down in horsepower, it looks pretty good, though the audio is really just average at best. The biggest knock on the game is that it lags, and to be honest, it can get pretty bad at spots. If you can look past the framerate issues, and the fact that you're not getting the full experience on the Genesis, you'll find a solid shmup that probably doesn't get enough respect on the platform due to it not being the best version of the game.

Darwin 4081

As you may have guessed from the title, evolution plays a key role in this one. In Darwin 4081, a port of the arcade title Super Real Darwin (not, oddly, its predecessor, Darwin 4078), the planet Lakya has inadvertently released their life force that drifts to another planet, Cokyo. The two planets end up going to war with the use of their constantly evolving weapons and ships. The storyline is probably the most interesting thing about the game, along with your ship consistently changing and evolving based on the items that are dropped by your fallen enemies. Darwin 4081 is a vertical shooter that allows you to have a standard weapon that will deal with most of your foes, as well as a ground weapon, specifically for dealing with lizard-like enemies that patrol the land. The "upgrades" to evolve your ship won't be for everyone, so it's advised that you try them all out and plan to avoid the ones that don't help you out. Darwin 4081 is a pretty fast and fluid game, but it certainly won't blow anyone away in the presentation department, as it's one of the more bland, generic shooters on this list. Outside of the concept, there really isn't anything spectacular here, but there's nothing truly awful either. If you've tried all of the rest, give Darwin 4081 a go.

Cross Fire (Super Airwolf)

Cross Fire (aka Super Airwolf) is a game that switches up its gameplay. In Japan the game proudly sports the Air Wolf brand, but outside of that region it is known as Crossfire. I assume this is due to licensing issues. At first the game is very similar to Tiger Heli, you control the helicopter (Airwolf) and lay waste to other airborne bad guys. After that comes the ground phase; you have one more opportunity to use your helicopter, this time you can take out ground unit (mostly foot soldiers) so that the third game phase will be a bit easier. The third phase is straight NES Commando-like shooting. The main character is on the ground and he can freely roam in any direction while dodging fire from other ground units. It's not a bad combination and it is worth giving the game praise for trying something different. That being said the title is ok at best. There are a lot of better shooters to spend time with on the Genesis/Mega drive.

Twin Cobra

Adding to Toaplan's long list of Genesis/Mega Drive games is Twin Cobra. This is an arcade game that was published by Taito. It is the successor to Tiger Heli and like that game it is a vertical scrolling shooter that puts the player in control of a helicopter. You have a forward shot that can be powered up and a bomb that damages all enemies in a circular range. The graphics are only ok by the console's standards and the game has a fair challenge (which can be

adjusted with eight difficulty settings). Twin Cobra falls right on the fence, if you are not a shooter fan already, Twin Cobra will not convert you.

XDR: X-Dazedly-Ray

There isn't much to say about XDR, outside of the fact that you probably won't have much fun while playing it. There are six stages of horizontal shooting, each with a boss at the end, and while some have compared it to Gradius, at least in concept, the two games couldn't be more different. Graphically, XDR isn't too bad, but the audio is uninspired in both the music and sound effect departments, and just ends up making the whole experience worse. The gameplay is too slow, and you never really feel like you're in total control of your ship, which happens to be bigger than most ships in similar games, causing you to have more trouble than you should when it comes to dodging enemy fire. When the best thing you can say about a game is that it has cool boxart, it's a sign that you should stay far, far away.

Heavy Unit is a game by Kaneko, a company with a decent shooter resume including Air Buster (PC Engine & Genesis/Mega Drive), Nexzr (PC Engine CD), and Cyvern (Arcade). Unfortunately, Heavy Unit does not stack up to the aforementioned games. It's not broken, but it's bland overall. You control a ship that has the ability to transform into a mech, similar to a "variable fighter" in Macross. There are some colorful stages and bosses, but if you are looking for that action-packed thrill that shooter fans expect from the genre, you will be disappointed. The game's biggest crime is just that it is boring overall and its shooting sound effect gets annoying fast. Heavy Unit never got a release outside of Japan, so it does get a bit pricey. It's recommended for collectors and completists only.

Xenon 2: Megablast

Xenon 2 is the prime example of a game that simply hasn't held up well. The background graphics aren't bad, and it is nice to be able to travel in reverse in a vertical shooter, but that's pretty much where the positivity ends. It's painfully slow, to the point where it's almost unplayable. The speed of the game actually contributes more to the difficulty than anything else, and even though you can upgrade your ship, it doesn't make the game any more enjoyable. It's a good thing that you can reverse too, because there are several instances in the game where you'll be trapped and have to back up, though there's a good chance that you'll get destroyed in the process. Note that if you want to purchase the game, it was originally region locked to Europe, so you'll need an adapter if you're planning on playing

it on a standard console from another region.

Xiao Monv: Magic Girl

Few people have even heard about this unlicensed Mega Drive title from Gamtec, but it's actually pretty fun to play. I'd love to tell you something about the story, but it's in Chinese, and I can't translate. If anyone knows anything, please let us know in the comments. From what I can tell, it's a vertical shooter, but it doesn't look anything like a standard shmup with the cute and colorful appearance. The game tends to be a little slow and the frame rate can be choppy, but it doesn't seem to affect the difficulty of the game, which remains pretty easy throughout the five levels that are present. You have three different weapons at your disposal, and enemies ranging from smiling faces to pencils will come at you from all directions, so sitting at the bottom of the screen will lead to trouble with enemies sneaking up on you from behind. The most interesting part is that the game contains a life meter, which isn't usually present in games from the shmup genre. It's not a long or difficult game though, and is a largely forgettable experience.

Gadget Twins

Gadget Twins' art style is very kiddy and calling it a shooter is a bit of a stretch. You don't actually shoot, but punch in a short range in one of four of the cardinal directions. You play a happy little submarine that is always smiling unless you die. All the environments and enemies in the game have a cutesy look to them, which is fine and works for some games like Parodius and Harmful Park, but this game feels like some cheap Fisher-Price product. There are shops throughout the level like Fantasy Zone, but that doesn't make it interesting. The game is weak overall and hard to enjoy. Add this to your collection only if you are morbidly curious or a collector that is a completist.

Divine Sealing

Stay far, far away from this one. Much like Magic Girl, Divine Sealing was an unlicensed game that never made it outside of Asia, but those in other parts of the world certainly aren't missing out. Divine Sealing is a vertical, top-down shooter where you are trying to rescue a princess through five levels of standard enemies and bosses. What's your reward for passing each level? A striptease, of course! Suffice it to say, if you do try and play this game, it's probably best to do it with only age-appropriate people in the room. It's best to play this game with the sound off, but unfortunately, there's nothing you can do to stop the visuals from destroying your eyes. There's legitimate seizure potential when sitting in front of the screen with these levels, and at the very best, you'll be so sick of what you see, that you'll need to turn it off. The gameplay is the best thing about Divine Sealing, but it's still not good, as your ship is far too jumpy, and as evidenced by a YouTube video, you can actually sit in one spot, hold the shoot button and never get touched. Believe me, you're not missing anything if you never play Divine Sealing.

Burning Force

When I first got my Sega Genesis, I was addicted to Space Harrier, and I couldn't help but be reminded of it when I first booted up Burning Force. The first thing that you notice when you start up the game is the vibrant color being used, and it really is quite striking, but being an early Genesis title, don't expect anything of note in the graphics department. If you're an audiophile, there are two distinct parts to the discussion here. The first being that the music is solid, and you can sound test all of the tracks from inside the options menu, which is a nice touch. Unfortunately, the rest of the audio is rather uninspired, which is kind of understandable considering that the game was released in 1990. I mentioned Space Harrier off the top, and while Burning Force borrows from the series, it is a little different. First, you control Hiromi Tengenji, as she takes on her enemies while riding a scooter. Unlike Space Harrier, you can really only move side-to-side and not vertically, but you do have your standard missiles and guns available at your disposal. The game runs at a pretty solid framerate, and when it dips, it really isn't noticeable, but the sense of speed isn't good. Where Space Harrier nailed the speed aspect, Burning Force seems incredibly slow by comparison, and the game isn't really difficult, even with the adjustable settings. It's one of those games that falls right in the middle of the quality Genesis shmups.

Super Smash TV

Super Smash TV has attained a cult-like following in the years since its release in 1992, and surely the recently released Hotline Miami took some inspiration from the bloody gore fest designed by Probe and Acclaim. The game is set in the future, with your character on a TV show where he must fight for his life. The goal is to kill as many enemies and bosses as possible, with money and prizes being the reward at the end. The game is fast, with enemies coming at you from every possible corner, while weapons and power-ups are consistently dropped for you to add to your arsenal. The game's difficulty does see a pretty big spike as you progress, and the bosses present a sturdy challenge. Adding a second player for co-op adds to the fun, and helps out with the tougher levels, without question. On the negative side of things, the audio could have used some more work, and the controls can sometimes get in the way, but there's nothing here that stops the game from being fun, especially with two players. It's one of those games that was better in the arcades, but is still worth a look on the Genesis.

Saturn SHMUPs (2013-05-17 03:15)

Two-dimensional shooters are some of the most intense old-school games out there due to the precision, reflexes, and memorization needed to survive these adrenaline rushes. For fans of the shmup genre, the Sega Saturn is a must-own console due to its excellent exclusives, a healthy dose of high-quality cross-platform ports, and plenty of 2D processing power. Racketboy's newest contributor, BulletMagnet , walks us through the Saturn's impressive shooter lineup from the excellent all the way to the mediocre.

Radiant Silvergun

One of the few Japan-only shooters that even non-shmuppers might have heard of, Radiant Silvergun is best known for the high sale prices it attracts on eBay, but the relative few who have actually experienced it can tell you that there are many other reasons why shooter fans ought to make it their mission to try this title at some point in their lives. Not only was it the first scrolling shooter to come forth from cult developer Treasure (better-known in the West for Silvergun's pseudo-sequel, Ikaruga), but down to this day there's simply no other shmup quite like it.

More than perhaps any other game of its ilk, Radiant Silvergun embodies an "epic" spirit – from its relatively lengthy structure (an hour or more per complete run-through) to its grandiose and pretentious story (accompanied by a symphonic classical soundtrack, to boot) to its seven-simultaneous-weapons setup to its beves of bosses, and their impeccable ability to make you exclaim "you want me to steer my ship WHERE, and do WHAT?", this game does its

darndest to make you feel like you're doing something more important than just pressing buttons in front of a screen. This tone extends past its trimmings right into the core gameplay – Silvergun is challenging (though mostly fair, thanks to precise control and a small hitbox) even when played with a “just try not to die” mindset, but if you want to really get anywhere in it you'll have to devote yourself to mastering its scoring system, which primarily involves only shooting enemies of a certain color, and a lot of memorization. Since your weapons power up based on how well you score, you'll need to learn the game inside and out – playing it “casually” is NOT an option if you're looking for “legitimate” one-credit clear.

The Saturn port, aside from being pretty much arcade-perfect (the unusual graphical blend of sprites and polygons, by the way, still impresses), adds a handful of nice extras, most notably a “Saturn Mode,” which not only further(!) lengthens the game and includes additional dialogue and opening/ending anime sequences, but allows you to save your powered-up weapon levels between runs if you'd rather just blast through everything without worrying too much about chaining enemies. Be that as it may, however, some shooter fans will still be turned off by the undeniably overbearing nature of Silvergun's scope, ambition, and challenge – this is understandable, as it's definitely not intended to appeal to everyone to begin with. That said, if you're a shooter fan you still need to track down Radiant Silvergun, just to see what it's all about – after all, the only way to know for sure whether it's for you is to play it yourself.

Batsugun

If the ability to wield fictional weapons of mass destruction (hopefully without being preemptively invaded) is your primary motivation for playing a shooter, then boy is Batsugun the game for you. The final shmup release of iconic developer Toaplan, Batsugun set a new bar for just how much havoc players were allowed to wreak onscreen, and it's still quite the display of pixilated pyrotechnics 15 years after its initial arcade release. In a historical context, many shmuppers credit it as the title which bridges the gap between “oldschool” and “modern” shooters.

The copious weapon fire isn't the only thing that looks great – the detailed, colorful spritework here is some of the company's best, though along with your uber-powered weaponry it can sometimes make it tricky to spot enemy bullets (and their arsenal is almost as 'roided up as yours). Otherwise, the game is pretty well-balanced – along with utilizing regular old power-up items your weapons will “level up” after you've destroyed enough stuff, and henceforth never dip below that level if you die, which helps to prevent you from being left with inadequate weaponry at an inopportune time. The game is also relatively generous with bombs, though stingy with extends – be advised, though, that the scoring system is one of the most arcane you'll see, requiring, among other things, certain command motions to be entered at certain times to reveal certain bonuses. Believe me, you'll never figure out most of this game's hidden tricks on your own, so don't be ashamed of looking them up in an FAQ.

The Saturn port is superb, and includes both the “regular” and “Special” versions of the game from the arcades – the latter, among other things, gives you a smaller hitbox, stronger bombs, and several truncated (and tricky) “loops” to fight through after finishing the initial five stages. It also has an optional arranged soundtrack (good) as well as the complete elimination of the arcade game's slowdown, which can make the loops in Special even tougher (bad), although it also adds in a very fast autofire button to help you deal damage more quickly. All in all, one of the Saturn's essential shooters, especially considering that it was never ported to anything else.

Battle Garegga

While shmups aren't usually considered a particularly "controversial" gaming genre, Battle Garegga, Raizing's most famous creation, fits that bill not due to its thematic content but because of how brazenly it challenges players to forget everything they know about how to play a shooter. Garegga is the game that made the word "rank" a household term for shmuppers – of course, from the genre's beginnings many such titles have been built around some sort of "rank" system, which adjusts the game's difficulty based on the player's performance (i.e. Gradius gets harder as you power up more), but Garegga's take on this setup is one of the most extreme and unconventional in the entire genre. Whether it's regarded as an abomination or a revelation depends upon whom you ask.

On the surface Garegga looks like a pseudo-WWII shooter, albeit a remarkably well-crafted one – the detailed sprites are superbly evocative of the game's gritty world (note to today's developers – this is how to use a muted color palette effectively), and the pulsing, apprehensive soundtrack adds tensity to the atmosphere with just as much aplomb. Once you start playing you'll love adjusting your options on the fly and blasting away everything in your path, but after awhile you'll likely notice that the game seems to be angry with you. This is because Garegga's rank system will penalize you with steadily increasing difficulty for almost ANY action you take, and will only lighten up if you lose a life. While the detailed workings of its system are far too complicated to go into here, the basic gist of playing Garegga "properly" is to get by as long as possible on as little as possible – hoarding powerups, bombs and lives will only make the game impossible later on. To make it all the way through, you've got to, among other things, spend your bombs on blowing away background scenery for points, to take advantage of the generous extend rate – so as to have more spare lives to sacrifice to keep the rank down (in other words, not playing "for score" isn't an option). Very few games force such conditions on a player (most of those that do, incidentally, are also by Raizing), but if you take the time to get used to it, Garegga is a tough-yet-satisfying experience like no other.

This title was only ever ported to the Saturn, which makes it all the more fortunate that said port is so excellent. Arcade-perfect in terms of presentation and gameplay (though having to unlock the original's slowdown is a bit annoying), it also includes some great extras – code-free hidden character selection, various rapid fire settings, and even a pair of unlockable superplays are but the most notable of them (unfortunately, the "red ball" option for the hard-to-see bullets isn't worth much). Unfortunately the game is a bit tough to find, and expensive when found – regardless, anyone who considers himself brave enough to take this game on, and is willing to play by its unique and demanding rules, absolutely must pick this up. Just make sure you're prepared.

DoDonPachi

Regarded by many as the definitive “manic” shmup (and by some as the definitive shmup, period), DoDonPachi remains arguably Cave’s most iconic and popular release. On the surface it might look like a prettier version of DonPachi, with the same core component of planes, chains and lasers, but play it for a bit and it’s clear that you’ve got a whole other class of shooter on your hands.

First off, you can now choose to add an extra jolt of power to either your shot or your laser at the start, giving you an opportunity to “tweak” each plane a bit to your personal play style (as well as soften the blow of a power down a bit, as your “juiced-up” amenity isn’t sent back to square one after dying) – additionally, the frustration level has been reduced, as most of DonPachi’s “sneaky kills” have been eliminated, and the opportunities to chain enemies have been expanded. In this way, heavy memorization is needed to score well, but not to survive, which gives both “hardcore” and “not-so-hardcore” shmuppers an opportunity to play and enjoy the game in their own way. A handful of other scoring techniques (most notably keeping a surplus of bombs) gives you even more to mess around with at your discretion, and the butt-rock soundtrack fits perfectly with the onscreen chaos (though unfortunately there are too few tracks).

The Saturn port turned out pretty well – though the graphics and sound are not quite arcade-perfect (most noticeable in the pixellated explosions), otherwise it’s just as enjoyable. The main “bonus” on offer is the Saturn mode – though its exclusive extra level (a sort of “stage zero”) and slightly reduced difficulty are nothing to write home about, the fact that it lets you face off against hidden boss Hibachi at the end of each run is a nice treat for players who would have had trouble meeting the requirements to get to him otherwise. This version is also cheaper and easier to find than the PS1 port (especially considering it got a “SataKore” re-release), so even though it’s not as refined in terms of presentation, it’s still well worth playing.

Layer Section

Also known as Rayforce, Galactic Attack, or Gunlock depending upon which region/console you’re playing it on, Layer Section is considered one of Taito’s marquee shooters by fans of the genre, not to mention the recipient of one of Acclaim’s precious few acts of benevolence toward the gaming community (namely publishing this in the West and leaving it intact). This shmup was the first to utilize a “lock-on” subweapon mechanic – a small cross-hairs floats a fixed distance in front of your ship, and any enemies that can be seen approaching from below you, in the background, that make contact with it will be “locked on.” From here, hit the B button and all targeted enemies will have homing lasers hot on their heels, saving you the trouble of having to deal with them at your level – additionally, the more baddies you can latch onto before vaporizing them all at once,

the more points they're worth.

Sound cool? Good, as you'll need to learn to make good use of this feature, since aside from your basic blaster it's all you've got – no smart bombs or other “get out of jail free” cards here. Your ship is also a fairly bulky target, and since many enemy attacks come from the background beneath you, it can be tough to judge exactly when it's safe to pass over them versus when they've arrived on your plane and pose a threat. Additionally, while powerups are relatively common and dying doesn't set you back TOO far, items will scroll off the screen in no time if you don't get to them quickly, which can be hard to do with said unwieldy ship during a firefight. Obviously, scoring well (and survival, to an extent) is a matter of rote memorization, since you've got to know where to maneuver the lock-on to catch groups of speedy enemies, as well as get to spots where your chunky craft is (hopefully) safe from enemy assaults.

The Saturn version is a pretty bare-bones straight port of the arcade release, but all three localizations do offer the essentials, including tate mode. The nicely-done sprites are always at least solid to look at (especially considering the game's original release date), and Zuntata's soundtrack is fast-paced and energetic while also projecting ominous and creepy undertones, a unique and effective blend. Adding to the overall atmosphere is the game's stage structure – there are no “breaks” between levels, as you move straight from one phase of your mission to the next, and are given a recap of how far you got at the “game over” screen – it's a small thing, but it's quite effective at pulling you into the game's world, making you feel more a part of the ongoing action, as opposed to just shooting random things in random places. Finally, whichever version you pick up this game is pretty inexpensive, so by all means track it down and try it out.

Find Layer Section/Galactic Attack on eBay

Soukyugurentai

One of Raizing's few products to utilize 3D graphics, Soukyugurentai takes the “lock-on” mechanic pioneered in Rayforce and gives it a shot in the arm – now, instead of a stationary “spot” floating out in front, your ship casts a wide, laser-lined “net” (two variations per ship, actually, which can be switched between at any time) to latch onto bunches of enemies at once. Additionally, you can lock on to enemies up on your level as well as those down below you – careful though, since unlike in Rayforce, to activate the “net” you have to stop shooting and hold the fire button down, which can leave you vulnerable. As a tradeoff, though, you do have a supply of bombs to bail you out if need be.

As you'd expect, locking on to multiple enemies before letting loose on them multiplies the points they're worth, but you also need to do your best not to use the lock-on blindly without thinking, since nailing fewer than four enemies at a time with it will get you either no point bonus at all or an outright reduction in each enemy's value (be especially careful at bosses if you want to score well – the lack of a visible life meter makes it tough to time their deaths towards obtaining maximum rewards). Also, like its cousin Battle Garegga, Soukyugurentai more or less forces a certain play style on you via its rank system – most notably, since powering up your “regular” shot makes enemies meaner, you'll want to try to get by almost exclusively via your lock-on. It's not as extreme a poke in the ribs as Garegga, but still worth noting.

All that said, the graphics hold up remarkably well for a 32-bit 3D title, and the score, done by Hitoshi Sakamoto of Radiant Silvergun fame, has his usual symphonic flair, but is balanced out via some electronic injections this time around – it perfectly suits the “dramatic, but not epic” ambiance of the game as a whole. Playing for high scores can be tough, since each ship's lock-on has varying maximum scoring potential, not to mention that you need to

hoard bombs (which, to make them appear more often, also requires you to keep the rank as low as possible) to take advantage of a very high “surplus collection” bonus. The Saturn version, ported straight from the ST-V cart, is pretty much spot on – it also includes a stage attack mode, a nice selection of options (some in need of unlocking), and a one-stage demo of Battle Garegga if you buy the “Otokuyo” re-release. Inarguably superior to the PS1 version, and not overly expensive, most any Saturn shmupper ought to have this one in their collection.

Twinkle Star Sprites

A wacky cross-breed of the shooting genre with another type of game – in this case, the “puzzle” set, a la Puyo-Puyo – Twinkle Star Sprites is also notable for being one of the most two-player-friendly releases in all of shmup-dom. After all, causing mass onscreen chaos via a cutesy anime avatar is all well and good, but even more satisfying when a pal (preferably one who gets snarky when it comes to “those weird Japanese games you play”) is on the receiving end.

Twinkle is set up, ostensibly, like most “versus” puzzle games, with each player (or the computer) having a vertical “well” on either side of the screen – however, instead of dropping blocks or blobs, each side controls a character which can move, shoot, and bomb freely inside their area. As formations of enemies fly in from the top and sides, the goal is to figure out how to destroy the whole mess in one shot by setting off a chain reaction, i.e. “I need to weaken this guy before setting that one off,” or “I need to wait until this group is stretched out to that side, to nail that other group over there along with them.” Large enemy chains send over fireballs that your opponent must either dodge or shoot to send back at you – especially long volleys, massive chains, or built-up charge shots can also send indestructible character-specific attacks over, or even a huge “boss” enemy to give your opponent grief. Also, as was mentioned, all the characters are cute as can be, so being handed bitter defeat by a pig-riding moppet or a sentient hairball gives the game an even nuttier ambiance – make sure not to go TOO hard on any friends you have over to play this (until they get the hang of it, anyway).

Otherwise, the graphics and sound are nothing too special, but set the stage well – the Saturn package, considered by many to be the best version released, not only includes (alongside the straight NeoGeo arcade port) a Saturn mode with an extra character, less slowdown and additional voicework, but a second disc crammed with art galleries and other fan-friendly content. The only real complaints I can mention are a) Sometimes the chaos onscreen can make it hard to keep track of things, b) You pretty much need someone to play against to get full enjoyment from this title, and c) No language option, so we can’t immerse ourselves in the glorious Engrish dialogue from the arcades. Aside from that stuff (and the somewhat steep price), Twinkle Star Sprites comes highly recommended.

Find Twinkle Star Sprites on eBay

Psikyo's most prolific series started here, and it gets a nice conversion to the Saturn – the presentation is slightly downgraded from the arcade version, but nowhere near enough to make any real difference, especially seeing as it plays so faithfully. That said, the only real “extra” here is a “fighter index” where you can listen to a guy talk (in Japanese, of course) about the airplanes featured in the game – nice for history buffs who can speak the language, I suppose, but the rest of us will just get right to the game.

Otherwise, Strikers sticks to the standards of the series, and Psikyo's output as a whole – you blast your way through a combination of random- and set-order stages, all brimming with unfriendly orange bullets. The setting is, ostensibly, World War II, but you're able to select several aircraft (including prototypes that were never actually produced) from both the Axis and Allied sides, who have apparently united to face a greater threat – I don't recall my school's history books ever mentioning giant mecha rampaging around in the 40's, but maybe I just wasn't paying attention that day. As with most Psikyo shooters, memorization is as important to success as your dodging skills are – the bullets are pretty fast and your hit area is pretty big, so you're best off knowing in advance which patterns are navigable and which you'd best avoid altogether or bomb through. Scoring is straightforward except for the gold bars some enemies leave behind – watch them closely and you'll see them sparkle and glint, and the shinier they are when you snag them the more points they're worth. Unlike its sequel, the Saturn port of Strikers is considered the superior version over the PS1's, and is not prohibitively costly to buy, so it's a no-brainer for Psikyo fans and a pretty sure bet for most others.

Gunbird

Don't worry about your repressed memories of the botched PS1 localization, Mobile Light Force, suddenly resurfacing to haunt you – the Saturn port of Gunbird is far more competent. Unfortunately it never saw daylight outside of Japan, but it's not super-expensive to import, so if you're looking for perhaps the best home version of the game don't be afraid to keep an eye out for it.

While Western gamers are likely more familiar with the sequel, which was ported and localized on the Dreamcast, the original Gunbird is one of Psikyo's earliest titles, and lacks many of the accouterments of its successor – no charge meter, no hidden characters, no coin chaining, just shooting, bombing, and surviving, without much else on top of it. Of course, there's nothing wrong with this if you don't mind the memory-reliant style of Psikyo's games, and the attractive graphics and charming, slightly goofy anime ambience are nice touches as well. Just be aware that some outdated amenities also make an appearance here, such as an “auto power-down” at max shot level, and notable bomb delays for some characters.

Aside from not being totally butchered on the gameplay front (and yes, tate mode is here too), the Saturn iteration of Gunbird has a nice set of extras for the fans, if not “serious” players – the character index, where the VA’s for the cast talk at you, is ample fodder for the geeks, though the real highlight is the art gallery, which includes an extensive collection of both official and fan-made artwork. The only usual Psikyo feature I miss is separate score tables for each difficulty level, but otherwise if you’re looking to play Gunbird this edition is probably the one you should check out first.

Sengoku Blade

Aside from having the latter half of its name mangled in various ways by translators (“Blaede,” “Braid,” etc.), this game is notable as one of the few Psikyo ports to make it to the Saturn but not the PS1 (though it eventually reached the PS2 bundled with its predecessor, Sengoku Ace). Aside from that, it’s semi-unique as a rare Psikyo side-scroller – their first one, in fact. Most importantly, though, the Saturn served it well.

Blade plays like most other Psikyo shooters, except turned on its side – disregarding the change in perspective, the main thing to set this game apart from its cousins is its feudal Japanese setting, and the great artwork and music used to set the mood (obviously historical accuracy is not the aim, though, unless the prominence of robotic samurai and the dress code for Shinto shrine maidens have been drastically altered in the historical record). There are two final stage routes to choose, both individual and team endings (almost all of them incredibly silly, especially if you can read the dialogue), and the ability to increase score items’ value by catching them at the right moment, but the setup is otherwise pretty tried-and-true in nature.

The one problem inherent to this game that’s not already an issue for most Psikyo offerings is the fact that you’re controlling a vertically-oriented character in a horizontal shooter, which can make dodging a bit more difficult than usual. Otherwise, the Saturn port is a solid if slightly expensive acquisition, containing an exclusive playable character (Marion, from Gunbird) and a second fan disc filled to the brim with artwork and other such content. Not to mention that this is the only shooter I can ever recall playing to feature a chain-smoking ring-tailed lemur – if that’s not enough to at least make you curious, well, I give up.

Cotton 2

While her first two games (Cotton and Cotton 100 %) were nothing special

all around, the pint-sized witch with a deadly sweet tooth made a fine showing during the 32-bit generation, starting with this title. Another exclusive ST-V port to the Saturn, it perfectly preserves the rich graphics and unique gameplay of the arcade original – it's also compatible with the 1M or 4M RAM cart, which adds a few minor bells and whistles, though it's by no means vital to the experience.

While it appears at first glance to be just another side-scrolling cute-em-up, no other shooter plays quite like this one does – for one thing, aside from the usual shot and bomb you have a “grab” button, which allows you to, indeed, grab and chuck enemies (and some other things) if you get in close. However, the way this was really intended to be used is in conjunction with the “seal” system, the game's real bread and butter – you see, Cotton (or Appli, if you're playing simultaneous two-player) has a set of “special” shots, in the same manner that fighting game characters have special moves. With a quick quarter-circle or double-tap, your witch of choice will send out various spreads or condensed blasts – moreover, if one of these finishes off an enemy, it won't vanish but will remain onscreen for a few moments “sealed” inside a ball of magic. This is your opportunity to either a) grab and chuck it at another enemy, which will itself be sealed, and start a chain for points, or b) further abuse the poor critter by blasting it some more, causing it to eventually release a health item (yeah, you've only got one life and a health meter in this one). You'll also want to be conscious of which “element” your shot is powered-up into, as it affects how your sealed enemies behave when you interact with them.

In the end, Cotton 2's uniqueness, its main appeal, will also be its downfall for some – the special shots, which must be input from a neutral pad position and are tough to pull off on the run, are NOT optional to use, as your “regular” shots aren't powerful enough to carry you through on their own (mapping the various special attacks to individual buttons IS available...once you beat Hard mode to unlock it). The “sealing” system, while not as memory-intensive as some other scoring gimmicks, is still oddball enough to put off many, since there's little actual shooting involved – of course, if that's not enough to chase you off, the “cute anime witch (and scantily clad fairy companion)” subject matter might do it. Regardless, Saturn shmuppers in the mood for something off the beaten path ought to look for this one – as a bonus, it includes a Saturn Mode with some rearranged enemy patterns and graphics, and a few options (some requiring unlocking) not found in the arcade version. Collectors will want to try to find a copy which includes a 1998 mini-calendar.

Cotton Boomerang

I was tempted to combine this and Cotton 2 into the same few paragraphs, but in the end I just couldn't quite manage it – despite their similarities, the games are too different to lump together while doing both justice. While you're still unleashing the wrath of a cutesy character to seal enemies and chain 'em for pointage, Boomerang is a marked improvement on Cotton 2 in many areas, and likely a better buy for many players, despite being a ways more expensive and hard to find.

Most notably, Cotton 2's life meter has been replaced with a “team” system – at the start you choose 3 characters (out of 3 variations each of Cotton and Appli, plus fan-service fairy Silk and goofy talking hat Needle), and each of them serves as one of your “lives,” with the next taking over after the previous bites it. Also importantly, you can now map most of your special shots to the extra buttons on the controller from the start, eliminating the frustration of not being able to pull off a command motion under pressure. Your “regular” firepower has also been juiced up a great deal – if you'd rather not deal with the sealing and chaining at all, you're free to blast your way through most

tough spots the old-fashioned way. Your “grab” move can now instantly seal enemies, as well as cancel bullets – the latter can also be accomplished by a powerful new charge shot. You’ll certainly need these new tools, as enemies are more aggressive than before, sometimes filling the screen with junk to dodge. In the interest of space, let me assure you that there’s a bunch more stuff that’s been altered and tweaked for Boomerang that I haven’t ample room to list – to summarize the big picture, you’re doing a lot of the same basic stuff you did in Cotton 2, but almost all of it feels much more user-friendly and enjoyable.

Of course, Boomerang also has its share of annoyances. First and foremost, the only way to switch characters (other than dying) is to use a bomb – this seems like a silly oversight, as bombing to get out of a jam might leave you with a character you don’t want for that area, while switching to one you DO want will cost you a bomb you’d rather have saved for later. This inconvenient setup is highlighted by the fact that each character has a fixed “element” now, so if you want to take advantage of certain scoring opportunities you’ll have no choice but to grin and bear it. Don’t think of killing characters intentionally either – the only way to earn a vanquished teammate back is to catch a seldom-seen flashing teacup in the end-of-stage bonus round, which takes as much luck as skill. Pinpointing the hitbox on the relatively large sprites can also be tricky, though playing as the pint-sized Silk or Needle obviously makes it a bit easier. Finally, a lot of the graphics from Cotton 2 are recycled here, so if you’re expecting a visual overhaul, forget it. In spite of all this stuff, I still recommend Boomerang highly – despite the inevitable blow that comes to your manhood if anyone else sees you play it (“dude, is that a fairy shooting at pumpkins?”), you just might not care.

Game Tengoku

While Jaleco is generally not noted for its shooters (come to think of it, what ARE they noted for?), that didn’t stop them from putting out Game Tengoku (aka The Game Paradise) in the arcades during the Saturn era, and bringing it to the console soon after. Moreover, this isn’t just any old “serious” shooter, but a “spoof-em-up” in the tradition of Parodius – moreover, while it includes several characters and references to Jaleco’s product library, it’s also a parody of arcade culture and video gaming as a whole, in which you blast (and are blasted by) everything from flying arcade machines to UFO catcher toys to karaoke song lyrics.

Putting the nutty presentation aside, the game itself is fairly standard vertically-scrolling fare – the main feature of note is the scoring system, which requires you to collect score items (which just so happen to resemble eggplants) in rapid succession to increase their point value. Unfortunately, the design beyond this point feels rather haphazard, as enemies come flying (and shooting) from all directions without warning, and frequently frustrate as you dart around in an attempt to snap up the eggplants before their value is reset. Character balance is also off, as one or two stand head and shoulders above the rest in terms of usefulness. It’s certainly not a completely broken game, but doesn’t reach far above average when judged on gameplay merits alone.

Whatever the game’s weaknesses, however, you can’t say Jaleco didn’t put their all into the Saturn port – not only does it include the original arcade version (intended for vertical-screen “tate” mode, also included), but a Saturn mode optimized for horizontal “yoko” screens, crammed to capacity with a new playable character, several additional stages, cutscenes between levels, and LOADS of voice acting (with a cast including several notable VA’s, especially if you’re an anime fan – if you’re into that you might want to track down the Special Edition of the game, which comes with an original anime VHS). Both game modes also include a time attack option for those looking for a quick play. Everything looks and sounds good, and the kookiness and humor shine through even if you’re not overly

familiar with the references (or the language). In short, if you're going to buy this game you're going to do it more for its personality than how it plays – however, that's really not as bad of a deal as it sounds, as there's loads of said personality here.

Parodius Series

In similar fashion to the venerable Gradius, the 32-bit ports of the Parodius games aren't quite as indispensable these days thanks to the release of Parodius Portable on the PSP, but that doesn't change the fact that the Saturn has the entire series available and is a gracious host to boot. The first and oldest entry is on the Konami Antiques MSX Collection, the second and third are on the Gokujo Parodius Da! Deluxe Pack, and the final two (Jikkyo Oshaberi Parodius and Sexy Parodius) got their own individual releases.

For the most part, each of the games plays pretty similarly to Gradius, their inspiration/lampooning target – the powerup bar (careful though, it now includes a “booby prize” slot which will remove all your enhancements if you activate it), annoying gunpods and stupidly easy final bosses are all present and accounted for, though a handful of changes and extra stuff (most notably the shootable powerup bells from Twinbee) also make an appearance. What gives these games most of their appeal, however, is the presentation – while all of the games were at least graphically solid on technical merits alone when they were released, when you're piloting a missile-riding, carrot-shooting bunnygirl while battling hordes of multi-colored penguins and airships with pirate-hat-wearing kitty-cat faces, that likely won't be the first thing on your mind. From the segments which outright parody Gradius and other Konami shooters (i.e. Moai heads with sunglasses and other accessories, an invincible “walker” that resembles a Vegas showgirl) to the utterly random stuff that makes you wonder what the programmers were smoking (just make it to the first boss of Gokujo and you'll see what I mean), you'll rarely, if ever, find yourself with nothing onscreen to keep your attention. The soundtracks, which feature goofied-up “remixes” of everything from classic Konami tunes to the William Tell overture, only serve to add to the madhouse atmosphere.

The gameplay differences between each are relatively minor – Parodius, Da, and Gokujo, for their part, all play more or less like “classic” Gradius games, with most of their good and bad points intact. Sexy mixes things up a bit by including a “mission” structure with branching paths – each stage has an additional task for you to complete aside from just finishing it, and whether you succeed or fail determines which stage you go to next (and how much intermittent cartoon cheesecake you see). Jikkyo, the only Parodius other than the original which wasn't an arcade release, has a more traditional stage structure, but also several additional scoring tricks (such as finding invisible fairies) and extra features (including a minigame or two) not seen in any other release. All said, if you like Gradius and silliness, you'll be in heaven here – even if you don't, trust me when I say that you still need to play these games at least once, to see what happens when the shmup genre puts a proverbial lampshade over its head. Believe me, it's quite a sight to see.

Gradius Deluxe Pack

Well, one certainly can't accuse this compilation of false advertising – it's got arcade-perfect ports of the first two Gradius games, and aside from a new CG intro, not much else. Of course, if you're a Gradius fan that shouldn't be an issue, not to mention that, if you can find a copy that still has it, the Saturn version comes with an exclusive Vic Viper paper cutout model for the collectors. While this compilation isn't considered as essential as it once was thanks to the release of the PSP's Gradius Portable, purists note some presentational imperfections in the latter, so some might still prefer this edition.

In case you need a quick synopsis, the original Gradius (aka Nemesis) introduces the classic weapons set and the standard power-up bar, and while the presentation has obviously aged some and the stages are shorter than later entries in the series, it's still got plenty of earnest, no-frills appeal left in it, and not just due to pure nostalgia either. Gradius II: Gofer No Yabou (gotta love Engrish) offers a new coat of paint for both the graphics and sound (including the now-famous announcer – “Speed Up!” “Shoot the Core!” “You Need Some Practice!”) as well as several selectable varieties of power-up bar (and the force field...yep, you can ditch the near-useless forward shield). Most shooter fans will agree that everyone ought to play these classic games at some point, to see where one of shooting's most legendary series began.

At the same time, it's worth noting that, being arcade games, these titles were definitely designed as quarter-munchers – if you lose a life (and your power-ups) at certain spots, it can be incredibly difficult to recover. While neither's difficulty is as blistering as that of the arcade version of Gradius III, the “ice chunks” stage of Gradius II will still frustrate many, and it's hardly alone. If you don't mind the checkpoint structure and emphasis on precise, predetermined actions over spontaneity, you'll be right at home with the good old Vic Viper here, and likely for most of the rest of the series on other systems.

Detana Twinbee Yahho! Deluxe Pack

One of the most famous “cute-em-up” series ever released (and perhaps the very first one, depending on how strict your definition is), Twinbee banishes pretty much anything remotely dramatic from its ranks, replacing asteroids and aliens with puffy clouds, flying vegetables, and bright colors. This set, also released for the PS1, takes the series' last two arcade entries, Detana Twinbee and Twinbee Yahho! (and yes, they do pronounce it “yah-hoe” in the game) and sends them to home consoles together. Both share many of the same central mechanics, inherited from the earliest of their forebears, most notably the “bell” powerups, which must be “juggled” with the player's shots until they change color and turn into the pickups the player wants – many have disparaged this recurring feature, as it's tough to avoid shooting (and unintentionally changing) a bell you want

when you're being assaulted by malevolent silverware from all sides, though others welcome the challenge in "really earning" your prizes.

Detana (aka Bells and Whistles) plays very similarly to the original Twinbee (aka Stinger), containing many of the same powerups (the trailing options, the shield, etc.) and "bell chaining" scoring system, though it does give you a piercing charge shot in addition to your usual weapons. The main thing it adds, however, is a jolt of personality – not only have the graphics and sound drastically improved, but the Bees' pilots and other characters are given a place in the spotlight via brief inter-stage cutscenes and other interludes – in otherwords, the game's bright and colorful world finally truly shines through, and as a result this entry still stands as the most popular Twinbee title released to date. Yahho! further pumps up the presentation (if you ask me, it's one of the best-looking and -sounding "cartoony" games out there), and tosses a few more features into the mix, such as the choice of four charge shots at the start, and additional collectible weapons that can be held in your Bee's arms (if you still have them, that is).

Both games are pretty much arcade-perfect in terms of overall presentation and playability, though Detana, curiously enough, does not have its original vertical-screen orientation available, one of the few Japanese-released Saturn/PS1 shooters to be neglected in that area (Yahho! was originally played on a horizontal screen, so there's no such issue with it). Don't be completely taken in by the cute looks, though – while the games aren't as frustratingly challenging as some others, they'll still steal a life or two (or three) from you very quickly at certain spots if you're not prepared. Despite their imperfections, these games are still a good choice for anyone who doesn't mind a well-presented cute-em-up.

Salamander Deluxe Pack Plus

Perhaps the most sought-after of Konami's 32-bit arcade shooter compilations, Salamander, the slightly more obscure sibling of company flagship Gadius, gets its due here, together with its variant, Life Force, and its sequel, Salamander 2. This series, while similar to Gadius in several ways, departs from the former's conventions most notably by a) Featuring both side-scrolling and vertical-scrolling stages, b) Making more frequent use of "organic" settings, c) Granting you an instant respawn rather than sending you to a checkpoint after dying, and d) With the exception of Life Force, employing a more "traditional" power-up system.

While you're still piloting the iconic Vic Viper craft here (or the Lord British on the 2P side, during simultaneous multiplayer), as well as using many of the same weapons, in Salamander there's no power-up bar or "cashing in" generic collectibles for the upgrade you want – instead of needing 5 glowing trinkets to get an option helper, for instance, you just collect an "option" item, and boom, it's yours. This setup has both advantages and disadvantages – while you can power up more quickly now, there's also more potential for getting stranded if you die and the upgrades you need for the area simply aren't around. This is compounded by the instant respawn system – instead of going back to a checkpoint and (hopefully) an opportunity designed to get you back on your feet after biting the dust, you'll just have to pray that the specific items you need come along PDQ – technically you're able to re-collect your options, but in many cases they'll scroll off the screen before you can reach them at your now-lowest speed. Life Force has almost the exact same layout as Salamander, except with a slightly reworked presentation and a return to the old Gadius power-up system, with all its good and bad points intact.

Salamander 2, the most coveted part of the collection for many, retains its predecessor's basic gameplay and powerup systems, with a few additions – for one, if you collect two powerups for the same weapon it will temporarily

become more powerful. Also, you can now use the B button to sacrifice one of your options and unleash a homing laser to (hopefully) clear the screen out for you a bit – additionally, you’ve been tossed a bone in that your options won’t go offscreen when you die, but will “bounce” back in from the edge and allow you to actually get to them this time. As you’d expect, the graphics have gotten a nice shot in the arm, as has the overall ambiance – wait till you see what’s in store for the old “brain” boss at the end of the first stage. As with most of Konami’s other 32-bit ports, the games are all perfect or close to it – be aware, though, that this collection tends to be pricier than the others. Of course, this is somewhat softened by the fact that the PS1 version tends to go for even more. Unless you’re willing to sacrifice screen size for portability (and the inclusion of Xexex) via the PSP compilation, Gradius fans might want to diversify their collection here.

Kingdom Grand Prix

Also known as Shippu Mahou Daisakusen, this is actually the middle entry in Raizing’s “Mahou” series (sandwiched between Sorcerer Striker and Dimahoo), and the only one to get a port to a “mainstream” system. This is especially odd considering that Kingdom is far and away the most unusual game of the bunch – in brief, it’s an unlikely hybrid between the shooting and racing genres. Yes, you read right.

The game stars the four original Mahou characters, plus four others who haven’t been seen since, all competing in a flying race for a prize from the king – of course, this race is a bit different from the usual fare in that you’ve got a bunch of enemies shooting at you the whole way through (thankfully, of course, you can shoot back with one of two collectible weapons per character, or even ram them for damage). Of course, you’ve also got the other racers to deal with, and while you can’t shoot them you can spend a bomb to trip them up or try to ram them into a stray enemy bullet. As unique as this play style is, it’s still something of a tough sell – watching rivals pass right on by as you fight off an unavoidable boss is frustrating, and trying to strike a balance between combating enemies and keeping your speed up (which is done either by moving to the top of the screen or holding down the fire button for a boost – both are risky when done too frequently) is tough to do when your fellow racers can beat you just by cruising. You can technically finish the game without winning the races, but you’ll get a bad ending and lower scores for it.

Still, the gorgeous sprite graphics, fun characters (including some of the enemies – the vampire boss’s antics are particularly fun to watch), and nice variety of stages are worth experiencing, and while the Saturn port doesn’t offer any major extras, it does have a code to enable “shooting mode,” in which you just play through the stages as you would in a “normal” shooter, with the racing elements removed. Despite my criticisms of said racing, the stages are obviously built around it, and feel somewhat empty without it, especially with no real scoring system to speak of. All told, Kingdom is certainly noteworthy for its attempt to rock the boat in a somewhat cookie-cutter genre, though players will have to be willing to crunch down on some tough nuts baked in to fully enjoy it.

Thunder Force V

Techno Soft's most successful series (sorry, Herzog fans) slathers on a 3D coat of graphical paint this time around, but hangs on tight to its traditional 2D gameplay. As per usual, you've got your standard cannon and tailgun for starters, with upgrades for each and 3 additional weapons to collect, which can be cycled between at any time – pair them with up to three “CRAW” options (they're collected individually this time around) and it's up to you to use the appropriate armament at the appropriate time, and of course avoid being shot down while you're at it.

In addition to the standard features listed above, there are also two noteworthy gameplay additions in place – for one, you can now hold down the B button to activate your “Over Weapon,” which powers up the weapon you're currently firing, at the cost of weakening your CRAWs, to the point where a single enemy bullet can destroy them if you use it too often. Second, there's a simple scoring system in place, namely “kill big enemies faster, get more points.” This is actually a mixed blessing thanks to the uncharacteristically unbalanced weapon selection – the “Free Range” weapon can not only be steered to fire in any direction, but it's by far the most powerful enemy-killer you've got, to the point where many bosses go down in seconds if you get in close enough. Nothing else in your arsenal can begin to compare, so if you lose the Free Range and can't get it back, you're in for a tougher haul and much lower scores.

That being what it is, the Saturn port of TF5, with its extra scrolling layers and other graphical gimmicks, actually holds up better than the PS1 edition in terms of presentation, which is especially unusual considering the latter system's typical dominance when it comes to 3D graphics. Of course, the fast-paced electric guitar synth is here too, and gets you in the mood for some blastin'. The game also got a SataKore reissue and usually isn't overly pricey...unless you set your sights on the “Special Edition,” which includes a music CD featuring a selection of remixed tunes from previous games in the series. While few players name this TF entry as their favorite, most still consider it worth a go, especially for fans of the 16-bit entries.

Hyper Duel

A somewhat obscure Techno Soft arcade offering, Hyper Duel's main draw is your ability to transform each of the 3 selectable ships into a humanoid mech at any time – hold the A button and you fire shots as your “ship” form, hold B and you'll instantly transform and start blasting as a robot, generally with a more condensed, powerful stream of bullets that can be aimed as you move. While pressing either button, hold down the other at the same time and you'll execute one of two special attacks (depending on which form you're in), draining a refillable meter as you do so. Other than the ability to collect two types of (often quickly-destroyed)

option helpers, that's pretty much the game in a nutshell.

As always, Techno Soft's penchant for cheesy "pump you up" music and lots of explosions carries the day – the first boss, for instance, continues to swing its tentacles at you for a bit after it's begun to succumb to the inevitable, and you've got to wreck it a bit more before it's finally vaporized for good. Similar over-the top laser barrages and such serenade you throughout the journey – then again, what would you expect from a game with a title like "Hyper Duel"? Equally shallow, unfortunately, is the "scoring system," if you can call it that – if you sit completely still at any given time, your score starts climbing on its own. Exciting! For fans of Thunder Force and other games like it, though, this one still comes recommended...

...if you can find it. And, moreover, afford it. The title apparently received a very small print run, and seldom-seen copies of Hyper Duel can fetch prices to rival (and sometimes exceed!) Radiant Silvergun, the poster child for "sell your firstborn and left arm to play" games on the Saturn. If you decide to take the plunge, the port of the arcade original is thankfully faithful, and is accompanied by a Saturn mode which plays pretty much the same (though you now have the handy ability to lock your shot's direction in "robot mode") but improves the graphics and sound – while the 3D render on the cover might make you fearful of a sub-par polygon treatment, rejoice, as it sticks to sprites rather than forcing the extra dimension, as was in vogue at the time. Hardcore Techno Soft fans, if you want to express your love for your favorite shmup developer and have some cash to burn, here's about the best opportunity you're likely to get on that front.

Find Hyper Duel on eBay

Blast Wind

Speculation abounds as to exactly what the origins of this title might be – while there's evidence that Blast Wind was intended to be one of Techno Soft's relatively few arcade (and vertically-scrolling) releases, there's no indication that said release ever came to pass. In any event, the game eventually wended its way onto the Saturn, and in the process became one of the system's few shmup exclusives that isn't an arcade port. It's a tough one to track down, too, and pricey (while not as costly as Hyper Duel, you're still likely talking triple digits for a complete copy), so if you want to play it you'll probably have to be both patient and willing to pay up.

As for the game itself, each of your two available planes (automatically assigned, depending on whether you use the first or second controller) has two weapons (a "stronger straighter" one and a "weaker wider" one), each assigned to its own button, so you can switch between them at will depending on the situation. Powering up is more of a formality than anything else, as there are loads of items and it only takes a couple to get to full blast, so you're unlikely to be caught with a pea-shooter often – if that weren't enough, grabbing a powerup gives you a few moments of invincibility and stretches out columns of energy to each side of your craft, giving you a brief opportunity to sweep the screen clean (though there are also plenty of bombs provided). Otherwise there's not much to it, aside from some fixed-value point items (which still provide enough to net you several extends) or an occasional defensive option orb to distract you from blasting the heck out of everything that moves, and a bunch of stuff that doesn't while you're at it.

If the aforementioned paragraph makes the game sound simple and easy, that's because it is – most shmuppers should have little trouble one-crediting it with a little practice, though upping the difficulty's always an option. The game is also rather short even for a shooter, though the ability to take an alternate path through each stage adds a

bit of variety. The graphics, for their part, aren't a huge step above the 16-bit level, but aren't a distraction either, and while the soundtrack is vintage Techno Soft electronica, the voice samples are so muffled that they're largely unintelligible. All in all this isn't a bad game, certainly, but the limited scoring system and challenge, coupled with the high price, drag it short of a must-have.

Shienryu

While under-the-radar shooter developer Warashi has gone the anime girl route (and how) recently with Trigger Heart Exelica, back in the day, like so many of its fellow shmup makers, it stuck to relatively innocuous settings for its shooter offerings – yeah, there were characters and a plot in there someplace, but whatever. There are planes, there are tanks, there are shiny things to collect – you need more? Some might fault Shienryu for doing TOO little to stand apart from the pack (especially the Raiden games, themselves frequently cited as the definition of “standard shooters”) in this regard, but anyone hungry for some solid old-fashioned blasting will likely be right at home here.

As was mentioned, this game plays similarly to Raiden, though it also borrows some features, most notably its weapons, from its pseudo-prequel, Daioh – you’ve got three collectible armaments, fixed-value point items, relatively quick enemy bullets, checkpoints during stages (but instant respawn at bosses), plus you start on Earth and end up in outer space. A few key elements have been adjusted, however, and arguably improved – for one thing, your hitbox is a bit smaller here, and bombs grant instant invincibility, giving players a bit more leeway on the defensive front – enemy bullets are also a bright blue color, and generally easier to see (well, except on blue backgrounds, anyway). The graphics, while not quite as detailed as those of Raiden II, are still nice-looking, with lots of shrapnel, and a bit of fantasy influence for good measure (the main enemy, as the title suggests, is a dragon-mech). Music is nothing special, but explosions are satisfying.

The main complaint one might have about the game, incidentally one also inherent to Raiden, is that the appearance of some of its features, especially its rarest power-ups (most notably the seldom-seen shield item), is annoyingly arcane – it’s largely a mystery why they do or don’t appear at given points. Other than that it’s pretty solid for what it is – the Saturn port, for its part, lacks the extra mini-modes from the Geki-Oh PS1 port, and obviously doesn’t include the pseudo-sequel from Double Shienryu on the PS2, but it’s the only version to both retain tate mode and save high scores, making it the preferred pickup for purists.

Sonic Wings Special

Not to be confused with the arcade release Sonic Wings Limited, this game is something of a console-only “greatest hits” compilation of stages, characters, and enemies from previous Sonic Wings games. Created by Video System, many of whose employees moved on to Psikyo later on, this game has a feel similar to the latter company’s works, but also a charm all its own.

Sonic Wings (aka Aero Fighters in the West) always had a relatively simple setup, and Special is no different – all told, it’s a relatively “textbook” vertical shooter. About the only notable things here from a gameplay standpoint are the occasional point items (which are worth more when collected near the top of the screen – careful not to be kamikaze’d though) and the branching paths you can take through the last few stages. What the game lacks in innovation, however, it makes up for in variety and personality – you’ve got a healthy selection of planes (and wacky pilots, ranging from a ninja to a dolphin) at the start, and can unlock a bunch more. While the balance is a bit off, it’s still fun to try everyone out, as well as read what they say (if you can understand Japanese text) in between stages. There are a handful of other quirky occurrences in-game, from the altered appearance of the point items (play as the ninja and it’s a “yen” symbol, while it’s a “dollar” sign for the American ace) to being attacked by a giant monkey in space – in spite of this, the game still feels low-key and unpretentious, content to be the simple shooter it is. If you yearn for the days when the phrase “what’s my motivation” was attributed to actors instead of gamers, this might provide a breath of fresh air for you.

On the Saturn the package is solid, if unspectacular – it does include a “time attack” mode where you try to defeat several bosses in order as quickly as possible, which is a nice diversion if you want a break from the main game. It also comes with a mini-CD which includes a couple of songs supposedly performed by one of the game’s characters (an idol singer) – in case you need to hear it from me, it’s nothing worthwhile unless you’re a collector. In short, if you want a shooter that will grab your attention in ways you’ve never seen before, you’d best save your money for another title. However, if you want to balance out your shooter collection with something a little more old-fashioned you could do a lot worse (and a lot more cost-prohibitive) than this title.

Image Fight and X-Multiply

While Irem is obviously far and away best-known for the R-Type series, it also released a small collection of mostly-unrelated shooting titles that, while not as popular, still frequently developed cult followings of their own. Most of these offerings, despite their various unique qualities, didn’t stray all that far from the latter’s old-school memory-based core structure, and the pair featured in this collection are no exception. As a bit of trivia, both of the player ships from these two games (plus several others) were given cameos

in R-Type Final, namely the “Daedalus” (Image Fight) and the “Crossing the Rubicon” (X-Multiply).

That said, interestingly enough, Image Fight (which was supposedly an inspiration for Radiant Silvergun) is actually one of Irem’s few vertical shooting productions, though it’s still certainly no more merciful than any of its more famous cousins. You can collect either blue (fixed-direction) or red (aim-able) options as well as a handful of other power-ups, which, while they attach to the front of your ship like R-Type’s force pod, can only defend against one hit before being destroyed (which might be a good thing, as you can’t collect anything to replace your current weapon until it’s been shot off of you). Your options, though, are indestructible and can even be “boomeranged” at enemies, and your speed can be adjusted between four levels at any time. Despite these various amenities, however, you’ll almost certainly find yourself dying quite frequently (and being sent back to checkpoints) until you learn the layout of the stages.

X-Multiply is more akin to R-Type in terms of its side-scrolling structure and emphasis on using an invincible bullet-blocking attachment to help you through, but if you thought that the latter’s occasional organic backdrops and quite-possibly-phallic enemies were creepy, X-Multiply ventures even further into the dark, Giger-esque sub-realm of science fiction, with plenty of floating eyeballs and grotesque humanoid faces to keep you wondering what disturbing scenario you might encounter next (the plot, if you’d care to know, actually places you inside a human body, a la “The Fantastic Voyage,” except this body has been infected by an alien). Heck, the game’s not even normal enough to give you a regular ol’ force pod anymore – now, when you snag an item, a pair of tentacles spring out of your ship, and can be “steered” depending on which direction you’re moving in (and no, they can’t be detached). While this one isn’t quite as merciless as Image Fight, you’re still in for a challenge – both this port and the PS1 version are considered close to perfect, so if you’re a glutton for punishment they’re waiting with open arms.

Guardian Force

The Saturn’s only entry in the rather uncommon “tank shooter” subgenre, Guardian Force puts you in control of (obviously) a tank, which can rotate its turret to fire in eight directions – when you get right down to it, that’s this game’s most notable single feature. Of course, you’ll need to make near-constant use of it, as the screen scrolls in several different directions and enemies sally forth from every which way, keeping you on your toes.

You’ve constantly got a standard cannon firing in whatever direction happens to be “forward” at the moment, but as it’s pretty weak you’ll be depending on the five collectible weapons (each of which can be powered up to ten levels, and has its own unique bomb) and two types of missiles to see you through. The main scoring system is similar to the “medaling” found in Battle Garegga, where you’ll want to reveal score items one by one to continually increase their value until it’s at its maximum – of course, speed-killing midbosses for extra points is also fun. The visual presentation is solid if a bit generic (including the menus, which don’t include anything notable in terms of extras, as this is more or less a straight arcade port), and the music’s only notable for its rather frequent use of bells and gongs, which give it a slightly surreal feel.

Guardian Force is something of a minor pariah even among the shmupping crowd, not only because of its lack of personality but also because playing it feels a bit disjointed. Movement is pretty fast, which is good for getting out of the way of patterns you’ve memorized but bad for weaving through those you haven’t, making learning the game a matter of trial and (lots of) error. Granted, it’s nice to know that touching most enemies (as opposed to their shots)

won't damage you, and that certain "instant" attacks are explicitly telegraphed, but even at that the game can be quite frustrating if you don't know what's coming – and sometimes even when you do. One could certainly do worse than Guardian Force, especially when searching for a curiosity to fill out one's library, but it's not something to pawn one's soul for.

Bokan to Ippatsu! Doronbo Kanpekiban

While many "serious" shooter players will likely stay away from this one just because of its subject matter, Bokan stands a cut above the usual licensed game fare. Based on the Tatsunoko anime "Yatterman" (while also including references to other "Time Bokan" spinoffs), you play, not as yet another faceless ace pilot, but a trio of bumbling costumed villains, out to pit their silly animal-based mecha against the heroes' silly animal-based mecha in a battle for old-school anime supremacy. Even those unfamiliar with the subject matter should enjoy the vivid graphics and goofy humor, as long as they don't take the title too seriously.

You've got a selection of six vehicles at the start and receive three more to choose from later on – while the balance is a bit off, all are still fun to mess around with (and somewhat necessary, since you can't use the same one two stages in a row), especially since collecting enough "skull" icons during a stage enables you to turn into a giant, invincible harbinger of destruction for a limited time. You've also got an unlimited supply of bombs (it's good to be the bad guy), but it comes with a catch – not only do they not give you invincibility (or cover the whole screen), and take a few moments to load before launch, but if you're hit while getting one ready, instead of just losing a bit of life meter your vehicle will be blown to bits, leaving your team with nothing but a bicycle to ride and one hit away from a game over.

There's plenty of scenery to blow up, and you receive either skulls or point items depending on whether you bomb or shoot them, so you do have some ability to play for either score or survival, though the game is rather slow-paced and non-intense to begin with. This fact, along with the silly thematic trappings, will likely make this one a non-option for the more "hardcore" set (the theme song alone will likely be enough on its own to scare many off), but if you're just looking for a bit of fun this is a solid pickup. Aside from some minor presentational tweaks this version and the PS1 port are identical, so snag whichever you can find cheaper.

DonPachi

Rising from Toaplan's freshly-smoldering ashes, Cave's groundwork-laying

first shooter appears here, complete with all of its trademark wanton laser-y destruction, but while the Saturn port looks good, it unfortunately suffers from downgraded sound (an especially tragic shortcoming, considering the game's infamous announcer... "Keep your finger on the trigger, rookie!") and excessive slowdown.

Also, while there's plenty of off-the-cuff bullet dodging to be done, the game still relies on "memorize or die" moments a lot more than most any other Cave title, so it might hark back a bit too far for some players' liking.

If you're going to get this port it's definitely not a total waste, especially if you like tinkering with display options (the game gives you plenty of those), but you'd still probably be best off looking for the better-handled PS1 port, unless the Saturn's your only option.

Gun Frontier

One of three shmups released on the Saturn under Xing's "Arcade Gears" label, Gun Frontier is technically the direct predecessor of Metal Black, though the two games share nearly nothing in common. While this game's unusual ship design (most of the "ships" are shaped like old revolvers or other guns of some sort) wouldn't suggest it, the title is also considered the main inspiration for Raizing's Battle Garegga – the detailed backgrounds, elongated bullets, bomb fragments, and napalm spread super weapon certainly appear to foreshadow that later title.

While this remains the best port of the game (and was the only one for a long time, until the recent Taito Memories collections on PS2), the painfully slow ship movement and stiff-as-a-board stage layout (i.e., the power-up carriers move way too fast for you to get most of them unless you know they're coming...bombs are too slow to save you in a pinch...certain enemies will give you endless grief unless you kill them before they launch, etc.) do a lot to date it. With the port you do, however, get a friendlier rapid fire rate (a bit too friendly for some hardcore players, actually) as well as a sound test, and it comes with a "Gameest Gears" booklet for the collectors if you can find one with all the original packaging.

Metal Black

Rumored to have been cobbled together using the leftovers of a scrapped Darius game, this largely unknown Taito offering ended up serving as inspiration for both G Darius and Border Down, most notably via your ability to mash buttons for fun and profit during super-powered "beam battles" with bosses (yep, this is the first game to feature it). Otherwise, it's a pretty basic side-scroller – your only weapon, aside

from the super beam referred to earlier, is a straight-ahead double-shot, and your only power-ups are molecules of “Newalone” that float around periodically – you’d better know where they tend to show up, as using the super beam (once activated, you can’t cancel it until you’re completely drained) also brings your main shot back to square one. The trippy visual and sound design is among Taito’s most striking and creative (how about a boss that hatches out of the moon like an egg?), and trying to grab all the drifting Newalone before the boss can get it (it’ll use it to power its own weapons up) is fun, but your limited available defense against truckloads of cheap deaths from all directions ratchets up the frustration quickly. It’s not too hard to find thanks to a SataKore reissue, so it might still be worth picking up for some, especially if you’re picky about the visual specifics (or bugs, in the US release) that turn some off to the Taito Memories PS2 port.

3 Wonders

As the title suggests, this is actually 3 games in 1 – a platformer, a puzzler, and the reason this thing is listed here, a side-scrolling shooter titled “Chariot” (off to the side, if you’ve ever wondered where Marvel vs. Capcom’s elfish assist character Lou comes from, this is the place). The stylish fantasy-themed graphics are a nice change of pace from most typical shmup settings, and the ability to use your regenerating Gradius-esque trailing options to block bullets, damage enemies, or fuel power shots is cool, but even with those abilities you’ll still have a heck of a time maneuvering your rather bulky character out of the way of many of the game’s patterns.

All told, despite its strong points, the game just doesn’t feel fleshed-out enough to quite stand on its own – thus, it’s more or less where it belongs, as one third of a pre-packaged compilation. Additionally, the Saturn version is hard to track down and on the pricey side, so you might just want to try it (along with a bunch of additional games too) on the easier-to-find and cheaper Capcom Classics Collection Vol. 2...although, as with the other “Arcade Gears” releases, there’s a collectible booklet here if you’re of the packrat mentality.

Darius 2

The original arcade release of Darius, one of Taito’s more famous forays into the shooter realm, offered little to set it apart from its side-scrolling competitors at the time, save for three notable features – one, the ability to choose from several branching stage paths to progress along; two, the unusual enemy designs, most of which are giant mechanical versions of various fish and other water-dwelling critters; and finally a

“widescreen” cabinet featuring three horizontal monitors displaying the game at once. The game never really received an “arcade-perfect” port, largely due to the complications that the multi-screen setup brought to the table, but its sequel, which plays similarly albeit with a few minor tweaks, eventually got one on the Saturn, about seven years after its original release.

The “solution” to the display dilemma featured in this version, which was brought overseas to Europe but not the U.S., is to give players the power to zoom their viewpoint

in (which limits how far ahead you can see) and out (which makes spotting bullets difficult) at will – obviously this is hardly an ideal implementation, but in retrospect it’s probably about the best option available for a “direct” arcade port. Beyond that, while the zooming mechanic, if nothing else, is fun to toy around with, the game underneath really isn’t helped by it, and remains quite simple and outdated by today’s standards, leaving Darius II as more of a curio than an essential for Saturn shmuppers. Sort of like one of those novelty singing fish you hang on your wall, but robotic and packing heat.

Darius Gaiden

Widely touted as the first Darius game to “rock the boat” its predecessors sailed in to any significant extent, Gaiden (brought intact to the West by Acclaim, along with Rayforce) sticks to a more traditional single-screen display (which, obviously, made the porting process from the arcades a good deal smoother) and offers an improved (and increasingly surreal) presentation over its forebears. Players are also treated to a stock of (pretty cool-looking) smart bombs for emergencies, as well as the ability to temporarily “capture” midbosses for some help in their continued battle against those naughty space fish. On the surface, Darius finally appears to be on its long-overdue way into the “modern” shooter era.

Unfortunately, in spite of its improvements, it’s also as shameless a quarter muncher as you’re likely to encounter, with a rank system that’s frustratingly eager to leave you high and dry (it never lightens up once raised, no matter how many times you die/power down), certain bullet patterns that are nearly impossible to get through without a bomb or shield, and boss fights that take an eternity to end, even when tackled with a pumped-up autofire cheat (which most “serious” shmuppers refuse to go without when playing this). There are plenty of stages to see, wacky enemies to fight, and thrills to be had here, but even though the game itself isn’t hard to find or afford (especially compared to the PS1 version), they still come at a price.

Fantasy Zone

While Sega and Sunsoft's contribution to the "cute-em-up" niche has gotten somewhat lost over the years when compared to the likes of Parodius and Twinbee, the game has still been popular enough to spawn several sequels, remakes, and compilations – this Saturn offering, though, is simply a perfect port (an unusual feat, back in the early days of the "Sega Ages" collections) of the game that started it all. This title plays most similarly to Defender, taking place from a side-scrolling perspective – while your ship is always moving forward, it can actually be turned around (something dozens upon dozens of pilots in other shmups apparently never figured out how to do), and the screen will then start moving in the other direction (the stage will loop if you go far enough). Your craft, named Opa Opa, is apparently similar to the Bees from Twinbee insofar as he's apparently "alive" – not only can he sprout legs and walk around, but he can even buy stuff from the shops he encounters as he searches (with the help of a handy radar display) for enemy bases and bosses to take down with either a standard shot or a ground-based bomb.

The relatively simple but colorful graphics are perfect for the theme (and have held up surprisingly well for a game this old) and even with the auto-movement everything plays a good deal better than, say, the top-scrolling Thunder Force II segments, but there are still some irritating aspects to deal with – for one thing, most power-ups you purchase only last a short time (and everything is instantly kaput when you die), meaning that you'll spend a lot of your time with the default weaponry (especially since the price of every item goes up the next time you want to buy it). Your ship is a pretty small target and not too hard to maneuver, but when the screen gets loaded up and you're not holding a speed up, you're likely in trouble. This port, aside from faithfully reproducing the arcade original, includes a few extras, most notably a Replay Mode – unless you'd prefer to snag the recently-released series compilation on PS2, this one's a no-brainer for cute-em-up fans.

Gekirindan

One of many little-known Taito shooters with a small but devoted fan following, this a fairly standard vertical setup, though the plot (which involves chasing your cybernetic adversary through different eras across time) is at least somewhat different. As with most Taito products the game looks nice, though the soundtrack, while not bad, is mostly remix after remix of a single theme (to be fair, Radiant Silvergun does much the same thing and is rarely criticized for it). You've got three planes to choose from, and a small selection of collectible weapons for each, but you'd better hold onto them, as re-powering up after dying is often an ordeal – faintly-colored bullets also have an annoying tendency to get lost in the background at times.

Oddly enough, playing on the 2P side actually loosens up the rank, so remember that if you want to maximize

your chances of clearing it. Supposedly some Toaplan staffers had a hand in this, and there are a few references to their products here if you look, but you'll have to suffer through a chuggy port (ready for pre-boss loading?) to do it. However, to date, despite its problems, this is the only port of Gekirindan to include tate mode, which might influence some in its direction.

Thunder Force Gold Pack 1

The first of two 16-bit-era Thunder Force compilations released on the Saturn, this volume offers Thunder Force II and Thunder Force III for your blasting pleasure. In case you haven't played them on the Genesis/Mega Drive, TFII is a combination of the overhead-view "arena" levels of the first Thunder Force (which never made it beyond a set of Japan-only computer systems, and remains quite the obscurity to this day) and the then-new side-scrolling sections that became the series' standard. The graphics are obviously a bit dated twenty years on, and while a nice selection of collectible weapons are available (including a single CLAW option, which became two and three in later entries), if you lose a life you lose everything else long with it. This can be especially frustrating in the overhead levels, since you're always moving forward automatically and can only steer and shoot – most of your weapons require you to be heading towards your targets to hit them, leading to frequent point-blank deaths. The side-view sections are, if nothing else, a bit more comfortable, but are still outdated by today's standards.

TFIII is, for many players, the game that truly began to define the series, and certainly to popularize it. As referenced earlier, it deep-sixed the overhead portions of its predecessors completely, as well as allowed the player to choose one of several stages to start on. You can also adjust your speed on the fly, shields last until you're hit a few times rather than running out on their own, and you only lose the weapon you're using when you die (all these features were to be carried on through the rest of the series). As expected the graphics have been spruced up some, and the "high-octane" ambience, complete with fast-paced electronic music and lots of explosions that TF is known for, is demonstrably in effect. Both ports on the Saturn are nearly perfect (the only complaint is the inaccurate sound), and actually reduce the slowdown present in the originals as well – if you don't have them on the Genesis and don't mind the semi-occasional laser-to-the-face from nowhere, this is a solid package.

Find Thunder Force Gold Pack 1 on eBay

Thunder Force Gold Pack 2

The remainder of the 16-bit Thunder Force games make the trip to Sega's

next system here, featuring Thunder Force AC (an arcade-released retooling of Thunder Force III, later ported to the SNES as Thunder Spirits) and Thunder Force IV (brought to the US as Lightening Force). The former plays nearly identically to TFIII, and includes the same weapon set, though two of the stages are different and the level progression is always in a set order. The sound has also been rearranged a bit, but otherwise most everything that was in TFIII is here, just shifted around some.

TFIV, on the other hand, is considered the pinnacle of the series by a sizeable percentage of fans – the graphics are some of the most impressive ever to appear on the Genesis, and this time you can actually choose the order of all four initial stages, rather than just where you begin. The weapon selection has been shuffled a little, but is balanced well – also, partway through the game you gain a powerful charge shot, though you need CLAWS to use it. Stages are now larger vertically, which gives you more space to move around, though it can occasionally allow enemies to sneak up on you (or powerups to sneak by) from above or below, offscreen. As with the first Gold Pack the slowdown's been cut – this time, though, the sound has been brought back up to par, and everything else has remained faithful to the originals. An interesting bonus feature is also on offer – you can unlock the ability to play TFIV using the ship (and weapons) from TFIII/AC. Since there are none of TFII's overhead levels to deal with here, this is probably the preferred pickup for "modern" Thunder Force fans, though it's also pricier than the first volume.

Strikers 1945 II

You may have been a bit thrown off by the original Strikers 1945 being up so much higher on the list, but it's strange how unpredictable any given port's quality can be. While the first two Strikers games (which are largely identical in terms of how they play, except that this one adds a power meter which must be at least partially filled for you to use a charge shot) were each sent home on both the Saturn and PS1, their ports turned out quite differently on the two systems.

As you've probably read above, the first Strikers got perhaps its best treatment on the Saturn – for who knows what reason, however, the sequel is plagued by slowdown on Sega's console, and performs better on the PS1, making that conversion the preferred pickup if you have the choice. Granted, this version is hardly unplayable, but the odd downgrade in quality from the first game's appearance on the system certainly doesn't do it any favors.

Layer Section II

Released to Westerners on the PS1 as Raystorm, this follow-up to the

well-received original is considered at least slightly inferior on its own merits by many, and a less-than-welcome guest on the Saturn by most. While Taito originally planned to give the game 2D graphics like its predecessor, the industry's shift to 3D eventually proved unavoidable, and while the polygons don't look bad at all considering the game's age, the new "uphill" perspective and cluttered masses of rough shapes make some bullets and enemies hard to spot and avoid. An additional annoyance is the fact that, when you stop moving, your ship "drifts" slightly towards the center of the screen, which can make precise dodging more of a chore than it should be.

There are, however, some nicer additions here as well – you now have multiple ships to choose from, the ability to lock on to enemies on your level as well as below you (theoretically, you could possibly clear the game, and score well, without actually shooting much), and the means to deliver extra-heavy damage to bosses and other large enemies if you can sink your entire stock of lock-on shots into them at once. You also get a limited-use screen-clearing bomb, as well as a semi-worthless (uber-worthless if playing for score) "auto" option for your lock-on, which maps it and your "main" blaster to the same button. The Japan-exclusive Saturn version has an extra selectable craft and a stage attack mode as well as a few exclusive CG clips, but the presentation and overall execution are generally considered inferior to the Playstation port – pick up that one instead, if you can.

In the Hunt

Looking for something a little less Defender and a little more "Das Boot?"

This unique Irem side-scroller (Japanese title *Kaitei Daisensou*, or "Torpedoes Armed and Ready") stakes its claim on two interesting features to set it apart: first, it puts you in control of a submarine instead of an aircraft, which means that sometimes you'll have limited space to move around in, thanks to shallow water and such. Second, the screen doesn't scroll automatically, but rather gives you "GO!" signals, similar to many beat-em-ups, once you've blasted enough enemies to move forward on your own (stages have a time limit, so you can't sit idle for too long). The graphics are reminiscent of *Metal Slug*, and very detailed (makes sense, as many of those who contributed to this title eventually worked on *Slug at Nazca*), and watching everything slowly crumble to bits as you blow it all up just makes the settings that much more attractive.

Your sub can fire a few collectible torpedo variations in front, as well as mines (if you're underwater) or missiles (if you're surfaced) to the sides, which gives you some decent destructive potential, but any enemy that manages to get a shot off will still give you headaches, as your sub is relatively large and slow – this is gratingly compounded if the area you're in further limits your movement. Further, while the Saturn port keeps the look of the arcade original, it's also got more slowdown than either it or the PS1 edition – both of them made it to the West, so it's hard to justify buying this one over its counterpart.

Skull Fang

One of Data East's few shmup offerings, as its subtitle suggests this vertscroller is actually a sequel to Kuuga (known to Westerners as Vapor Trail), which was granted a port to the Genesis back in the day. The key feature on display here is the ability to adjust how fast the screen scrolls via your plane's throttle – while making your way through the stages it's more of a curiosity than anything else, but once you get to the bosses things get interesting, since they can speed up and slow down just like you can. There's a time limit in effect, so to bring your adversary down before it's up you've got to make near-constant use of the throttle to stay on his tail and keep him within range of your weapons.

This is also one of the few shooters to give you a handful of Street Fighter-esque “command motions” – you can use them to flip your plane around to shoot at a boss from a different angle. If all of this sounds a little too offbeat for your tastes you do have the option to make the speed adjustment automatic, as well as trade in the command motions for a traditional bomb, but the game feels awfully sparse without them, and the ugly presentation doesn't help matters. This one will probably be a bit too offbeat and uninviting for most, but a handful of enterprising shmuppers might enjoy the departure from the norm that this title brings to the table.

Kyukyoku Tiger II Plus

This sequel to the Taito original was actually developed by Takumi, perhaps best known for Giga Wing. Unfortunately, while many fondly remember the first Kyukyoku Tiger (aka Twin Cobra) as a classic helicopter shooter, fewer speak of this title with much fondness, thanks to its outdated presentation, unbalanced weapons (there's never much reason to use anything except the “green” one – especially since you have to mash the buttons like mad to get any worthwhile performance from the other two) and seemingly oversized hitbox (considering the amount of bullets you'll have to deal with), which serve to bring it down several notches.

Also, the 3 “modes” highlighted on the packaging are misleading, as only the original “Arcade” mode, which keeps the original vertical screen, is worth bothering with (unless you like playing in wobble mode). If you're still interested, make an effort to somehow try before you buy.

Capcom Generation 1

Even many non-shmuppers have at least heard of Capcom's most successful classic shooter, 1942 – this collection plants it and its two earliest sequels (1943: The Battle of Midway and 1943 Kai) onto one disc, along with a selection of bonus content. The original 1942 is about as basic of a shmup as you could hope to find – you can move, shoot, grab a handful of simple power-ups, and use a limited amount of loop-de-loops to get out of tough spots. Enemies and backgrounds frequently repeat (though considering the game's age, it's not too out of the ordinary for that era), and those tiny bullets seem a lot bigger when you've got a full-sprite hitbox.

1943 not only improves the presentation, but dramatically changes the basic workings of the game – you've still got your loops for a quick escape, but instead of multiple lives you've got a single "fuel" meter, which will slowly and constantly decrease on its own, and drop a big chunk when you take an enemy hit. While you've got several nice new powerups to play with (which will themselves run out of ammo after a short time), you'll frequently be forced to forego them to collect fuel refills instead – most of the power-ups you encounter here can be "juggled" a la Twinbee when shot, which can make getting the item you want (or need) tough when you're being peppered by small fry. 1943 Kai keeps the basic mechanics of its predecessor, but "remixes" the presentation, weapon selection, and stage layouts. The Saturn and PS1 ports found on this collection are generally considered the most faithful available, especially since few (if any) others contain tate mode – if you want the ideal olde-tyme shooting experience, this is the one to go for.

Capcom Generation 3

How much you might be persuaded to pick up this collection is directly proportional to how fond you are of Capcom's very early work – along with action-puzzler Pirate Ship Higemaru and hybrid oddity SonSon, the package features two shooters, Vulgus (Capcom's very first game) and Exed Exes. The former, as you might expect, is shooting simplicity incarnate – you've got a pea-shooter and a limited supply of missiles that can pierce through enemies, and that's it, as there are no powerups to speak of except missile refills. There are only a few enemy varieties (which will frequently swarm you like nobody's business, thanks to your meager armaments) and background graphics sets, and the only scoring technique to concern oneself with is nailing vertical columns of baddies with a missile for bonus points. As a bit of trivia, the "Yashichi" (pinwheel-ish) icon, which shows up in several other Capcom games as a bonus item, first appeared here, as an enemy.

Exed Exes is slightly more advanced than Vulgus, most notably for its early use of parallax layers in its graphics as well as simultaneous 2-player action, but it's still pretty basic. Your only weapon is still a basic frontal shot, though this time you can collect items to give it a little bit more oomph – you also have a bomb supply, but it only eliminates

bullets, and doesn't damage enemies. There are a few "bonus" sections where you can turn enemies into point icons as well as a few simple Zanic-esque bosses, but as in *Vulgus* you'll frequently find yourself swarmed. In the same manner as the other Capcom Generations shooters, these are probably the best ports of the games available, but again, be aware that you should be a fan of older, simpler titles before plunking down for them.

Capcom Generation 4

While some might be hesitant to consider the three games in this compilation (*Commando*, *Mercs* and *Gun.Smoke*) as "pure" scrolling shooters, they might as well be listed here for the sake of completeness. Each of these top-view games involves controlling a gun-wielding human character, as opposed to an airplane or spaceship – also, with the exception of *Gun.Smoke*, the screen does not automatically scroll but must be advanced by the player. *Commando*, the earliest of the titles, gives you a machine gun and a limited amount of grenades to pick off hiding or covered enemies – while the gun can be fired in eight directions, there's no way to lock your shooting direction, making focusing your fire on a target difficult. Also, your grenades can only be thrown straight ahead at a fixed distance, limiting their usefulness. While the game's influence on future titles, such as *Ikari Warriors*, certainly can't be denied, for most it will likely seem dated – its sequel, *Mercs*, while keeping the same basic structure, has a bit more of a modern feel, with several collectible weapons, vehicles, and a screen-clearing smart bomb to replace the grenades, as well as much-improved graphics and slightly more player-friendly mechanics overall.

Gun.Smoke, while more of a "traditional" shooter in that it scrolls by itself, is probably the most unusual of the three – as your cowboy strolls through the stages you actually have three shot buttons, used to fire at either an angle to the left or right or straight ahead; hitting two of the buttons at once will aim your shots at a halfway point in between their "normal" directions. You'll be juggling between them constantly as you try to pick off all the guys shooting and hurling dynamite from every which way, relying on a few powerups (including some that increase the speed and range of your initially quite-limited guns) to see you through – prepare to blast every item-containing barrel you come across, as the game is plenty challenging. Once again, the Capcom Generations ports of these games, on either the Saturn or PS1, are considered the most faithful if you want the definitive experience, next to playing them on an actual arcade machine.

This curiosity is actually part of a rather long-running series of “create it yourself” shooter builders released on several systems, sort of the shmup equivalent of the RPG Maker or Fighter Maker games. Obviously you’ll need to understand Japanese (or be willing to undergo lots of trial and error) to get the most out of the tools it gives you, as well as an enormous load of memory card space to save your creations, so the probable audience for the title outside of Japan is automatically somewhat limited.

The other possible draw for shmuppers here is that the disc includes a handful of “sample” games that you can play from the get-go, including a pair based off of Athena obscurities BioMetal and Daioh, but there’s only so much gameplay depth that the core engine can offer, though the possibilities in terms of presentation are nearly limitless. If you’re the creative type and are able to sort through the menus this one might be worth your while to track down. Recently, there has also been a homebrew effort to compile a number of fan-made games that you can download at play via the Dezaemon 2 Save Game Manager.

Psikyo bucks two of its usual trends here, not only opting for the side-scrolling route once more but also exchanging its traditional sprite-based look for digitized-style graphics. While many complain about the latter I honestly don’t think they look too bad, considering how some other similar efforts have turned out – once you get into the actual game, you’ve got three characters to choose from, and each can shoot, slash, and use a limited stock of magic spells to slay dragons, wizards, and a whole bunch of other fairy-tale nasties. Sadly, the basic execution of the formula is, simply put, off – your characters are even bulkier here than they were in Sengoku Blade, and dodging attacks is a huge pain, especially considering that your main shot is pretty weak – moving in close for melee combat is often a necessity. To make matters worse, you’ve got a life meter instead of stocked lives, and almost no invincibility time after taking a hit, which makes it easy to get overwhelmed, flattened, and frustrated in short order, even with health pickups available. Speaking of short, the game is quite brief even by Psikyo standards – it is worth noting, though, that the Saturn port, like the PS1 release (which made it stateside, though without the ability to save any data), includes an “Original” mode alongside the arcade version, which tosses some additional RPG elements to the mix. That said, unless you want the most full-featured version, it’s hard to recommend searching for the Saturn port when you could instead import Psikyo Shooting Collection Volume 3 for the PS2, which includes this game (sans Original mode) along with one of Psikyo’s more celebrated shooters, Dragon Blaze.

Konami Antiques MSX Collection

First things first – if you’re set on acquiring this compilation, the Saturn version is the one to go for if you can, since its PS1 equivalent was split up into three volumes and is thus tougher and pricier to track down in full. That said, while there’s certainly a sizable bunch of Konami’s hard-to-find older products (30 in total, a full third of which are shooters) from the Japan-only MSX computer system on offer, including some system exclusives, the limitations of the original hardware are likely to tax even declared fans of “old-school” gaming. The selection includes a half-dozen side-scrollers (Gradius, two variations of Gradius II, Salamander, Parodius, and Super Cobra), three vert-scrollers (Knightmare, Twinbee, and Sky Jaguar) and one free-scroller (Time Pilot). There’s not enough space to review them all individually, but then again many of them share the same problems, most notably choppy scrolling and sketchy hit detection – obviously at least some of these issues stem solely from what the programmers had to work with, but it doesn’t make most of the titles any more enjoyable, especially in comparison to more sophisticated offerings. Everything is technically playable (some titles moreso than others), but it seems a stretch to assume that many players would bother with most of these stripped-down conversions when there are so many other, better-executed shooters they could be playing, especially on the Saturn. This is a worthy pickup if you’re a gaming history buff or have fond memories of the MSX from back in the day, but just be aware that when the title says “antiques” it means it.

Space Invaders

I’ve always wondered, over the course of video game history, which single title has received the most remakes, re-releases, and rehashes in all – if it’s not number one, Space Invaders must be darn close to the top of that list. Anyway, this Japan-only release features the old-school blasting we’ve come to (repeatedly) know and love, along with a few display options and an exclusive Versus mode, which features a Twinkle Star Sprites-esque split screen and improved graphics, as well as the ability to send your opponents’ invaders down faster (or eliminate a bunch of your own at once) by picking off aliens of a certain color.

In the end, though, the bare-bones and decades-old core of the game remains intact, and unless you’ve never owned any other port of Invaders before (or are a huge series fan) there’s little reason to spend much effort finding it, especially if you’ve moved on to more “modern” iterations, a la Akkanvader or Space Invaders Extreme. If you can’t get enough of classic Taito, though, there was also a release of this that was paired with Puzzle Bobble 2X, in case

you're looking for both games (or greater collectability).

Cho Aniki

The full title of this one is WAY too long, so I won't bother typing it all – anyway, if you've ever heard of the Cho Aniki (“Super Big Brother”) games, you know what to expect – a highly...unique blend of utter randomness and goofy pseudo-homoeroticism. For people who will buy a game solely for how weird it is, this one is a definite must-have; looking past the trimmings to the gameplay front, unfortunately, you end up spending most of your time phasing between yawn-inducing, repetitive stage segments and “why won't it die” bosses, frequently wondering how in the world you're expected to maneuver your huge character around the screen safely.

The sparsely-animated digitized graphics are far from pretty, but they certainly serve to add to the bonkers atmosphere of flying bodybuilders and other nonsense – the music, though, believe it or not, is actually rather catchy, for its part. This Cho Aniki entry also made it to the PS1 in nearly-identical form, so if you've got an inexplicable hankering for some airborne beefcake, there it is – don't expect anything even remotely noteworthy beyond the inherent oddness, however.

First of all, no, that apostrophe is not a typo (at least not on my part, anyway). Second, this vertscroller is most famous for being one of the few commercially released “hentai” (literally “pervert,” the term denotes a game or other product with sexual content) shooters, and the only one on the Saturn (unless you care to count the likes of Cho Aniki). Originally released on the PC-98, the graphics (and, more importantly, the scrolling) have been upgraded in this port, and the hentai anime scenes between stages have been toned down – in fact, there's even an “arcade” mode included, which you can play through with the “story” cut out completely. While you do get some rather impressive firepower (including a few weapons exclusive to this port) to keep yourself occupied during the “interactive portion”, as well as the handy ability to quickly boost out of the way of oncoming threats, it's still obvious, as with most such games, that the shooting wasn't the developers' main focus in this title, as the attack patterns and scenarios you encounter are largely unsatisfying, especially juxtaposed with the many superior shooters available on the system. Perhaps the game's most amusing feature, however, is a two-player mode – I can only wonder...how many people who bought this game ever intended to acknowledge their purchase, let

alone play it, with another person present? Truth be told, I'm afraid to ask.

Macross: Do You Remember Love?

One of the longest-running and most popular anime ever produced, Macross (aka Robotech) has spawned a wide variety of video game offerings over the years, with predictably mixed results. This 2-disc Saturn side-scroller (and no, that second disc isn't extra fan content – you have to switch discs halfway through, a la the PS1 Final Fantasy games) corresponds to the movie “Do You Remember Love?”, which is more or less a condensed retelling of the first part of the TV series. The overall presentation is somewhat forgettable, but the between-stage movie cutscenes look quite good for the most part, especially considering how the Saturn usually condensed such interludes to heck and back – since the game is pretty short, even spread across 2 CDs, that's likely where most of the available space went.

The game itself is pretty pedestrian – you've got the usual trio of transformations with some differing characteristics (plane, mech, and half-and-half) that can be toggled between, though in several instances you'll be limited to one or two of them. Other than that you've always got a spitball gun, a supply of short-ranged bombs, and an unlimited stock of homing missiles at your disposal. You can tweak the specifics on each a bit in between stages, but when you get right down to it the game largely consists of holding and releasing the missile button every time something enters the screen – also, since your onscreen avatar is so huge (especially in “Battroid” mode), some enemy spreads are pretty much undodgeable. The only power-ups are occasional life meter refills, and there are no points or scoring here either. When all is said and done I think it's safe to say that, as is frequently the case with products like these, only card-carrying fans of the anime need apply here.

Terra Cresta 3D

The main draw of the original Terra Cresta was the ability of the player to control not just a single craft but several, collected one at a time, merged together into a super-ship – of course, the means to temporarily separate them and spread their waves of death across most of the screen or unleash an invincible phoenix when grouped didn't hurt either. That same base component is here in slightly modified form, but sadly that's really all that the game has to offer, and a lone gimmick of that nature just doesn't “make” a game as well as it did back in 1985.

The 3D graphical update doesn't look too bad overall, though the Star Fox-esque perspective that you're forced

into for boss fights is unnecessarily awkward. Also, the game does not have a point – I mean that literally, as the game not only lacks a defined scoring system, but ANY score or points at all. Especially considering that even its predecessor (and ITS predecessor, Moon Cresta) contained this basic shooter element over a decade before, this is a pretty baffling exclusion, and it takes a big bite out of the desire to replay and improve one's performance. As a result, the product as a whole feels tragically incomplete.

Tukai! Slot Shooting

An unknown entity even among most shooter fans, this Japan-exclusive odd duck mixes Space Invaders, a slot machine, an “ochi” puzzler, and a truckload of multicolored sea creatures into one stumper of a chimera. While the screen doesn't scroll, you are free to move your dumpling-like character anywhere on it – the thing is, the playfield starts half-full of pastel-colored crabs and other critters, and more continue to fall with time, as in Puyo Puyo or any number of puzzle games. As you might guess, if they touch the top, the game's over – the trick is to shoot 3 falling crustaceans of the same color in a row, which will cause the slot reel on the top of the screen to randomly award you a cycling-color bonus piece, which, when shot, will eliminate everything of that color off the screen, and possibly set off a chain reaction among the remaining pieces. There are a few more variables present, but that's the basic idea.

As unique of an amalgamation as this title is, the parts don't come together very well – for one thing, the game really doesn't reward luck and skill equally, as once you shoot one set of 3 your best strategy is to stop shooting as long as possible, wait for the slots to line up, and hope for a bunch of bonus icons to appear in rapid succession – shooting anything else in the meantime, even another set of 3, will only delay any potential rewards, so odds are you'll end up doing as much waiting (and hoping) as actual shooting. Movement is also on the clunky side – getting underneath nearly-landed pieces to pick them off is difficult and dangerous, as getting squished immediately ends your game. When all is said and done, I can only recommend this thing to hardcore fans of all that is both weird and Japanese.

Planet Joker

This title (which appears to have no connection to Visco's subpar shmup Earth Joker) is a rather rare find, but considering that it's frequently derided as the worst shooter on the Saturn, demand for it is hardly overwhelming. In a nutshell, you're cast as the pilot of a selection of crudely-realized 3D mechs, floating over Silpheed-esque “tilted”-perspective backgrounds, battling other poorly-rendered machines of

death with a handful of weapons, bombs, and an invincible shield meter.

The bulky onscreen character and the fact that you can't hit enemies too near the edges of the screen give it a clunky, unrefined feel, and the near-complete lack of challenge or excitement only compounds the boredom. Oh, and don't even ask what the game forces you to do while fighting the final boss. Seek this one only if you're a collection completist.

Tempest 2000 (a non-2D bonus)

I had to throw in one more game into this Saturn old-school shooting fest even though it isn't a 2D game like the rest. This update of the classic vector shooter keeps most everything faithful to the original, but also adds in a bunch of uber-cheesy techno beats and a handful of modes to choose from – “Traditional” (Tempest pretty much as you remember it), “Plus” (which allows 2-player mode and a few other additions), and the main event, “2000”, which slightly retools the graphics and includes a sizable amount of new stuff. Some of the extra features of the latter mode include a selection of power-ups (including a “jump” ability and an AI helper), new enemy types to deal with, a limited save feature, and a new set of challenges, dubbed “Beastly Mode,” that you can try your hand at after finishing the normal game.

There's also a unique “Duel” mode which allows you to play against a friend – I can only imagine how many arcade gamers from the olden days might have used this to determine supremacy amongst their ranks. Plus, in any mode you can use the X, Y, and Z buttons to switch between 3 zoom levels at any time – too bad the viewing angle isn't adjustable, though, as some hills and valleys can make enemies and bullets hard to spot until they're on top of you. Also, a warning to those used to the delicate tap dodging of contemporary shooters – here you've got to hit the directional buttons pretty hard to make your ship register movement, though a decent joystick might be of some help if you've got one. Whatever the annoyances, though, this is still pretty much a sure pickup for fans of the original Tempest.

DonPachi

Picking up where Batsugun left off, newly-formed Cave, one of the few consistent shooter developers still in the business today, began its journey to the top of the genre heap with this release. PS1 owners sick of hearing about how much better the Saturn is for 2D games ended up getting a reprieve when this port hit the shelves – boasting a nearly arcade-perfect presentation and no slowdown problems (plus a budget re-release), this is the preferred pickup for most any shmupper with a Playstation. That said, the scrolling shooter genre was in something of a state of transition at the time, and this is one of the games which headlined that shift – nearly fifteen years later, how does it hold up on its own?

Taking the mechanics of the “C-Type” craft from Batsugun a step further, each of your three selectable ships will let loose its “regular” shots when the fire button is tapped, but will switch over to a more condensed, powerful laser if the player holds it down. Doing this will also slow your movement speed, which can come in handy when weaving through tight bullet spreads, as well as determine whether you use a standard full-screen bomb or a Mega Beam O’ Death when you decide to hit the B button. “Enemy chaining” also makes its debut here, awarding you extra points for taking down lots of enemies with only minimal gaps between kills, though you can also keep an eye out for opportunities to uncover hidden “bee medals” with your laser. You’ve got a pretty small hit area to work with, so you can (and had better) exploit small gaps between enemy bullets to get out of almost any situation.

Well, at least until you get to Stage 4 or so. As you progress, DonPachi almost seems to start pining more and more for memory-heavy “old-school” challenges, and will assume that you do too, sending quick waves of enemies, guns blazing, darting in from every which way with no warning, forcing you to either remember where they came from and when next time around or inevitably die in the exact same spot. This schizophrenic streak, paired with a LONG power-up curve (which is reset to square one when you die) will likely jar some players right off their couches, wondering where on Earth such a sudden and unforgiving change of tone came from. These annoyances aside, however, DonPachi should serve as a nice segue into “modern-style” shooting for a majority of players.

Attention, those of you who happen to be both purists and Cave fans – prepare to prostrate yourselves before your Playstations. While the Saturn port of DDP offered an extra mode at the expense of an arcade-perfect reproduction, those willing to fork out the extra effort (and cash) required to get their hands on this edition are free to banish any recollections of blocky explosions or muffled music to the abyss. It’s just the arcade game and not much else, but it’s as close to the original as a home port has come, and that’s a very good thing – some of you already know why that is, but everyone else, keep reading.

While many of the basic components of DonPachi (ship types, lasers, chaining, etc.) are back for an encore, nearly every element has been refined and polished to a new level altogether. For one thing, you can now choose to make each plane a “shot” or “laser” type, which beefs up that aspect of your firepower and also prevents it from returning to “pea-shooter” status after death. Stages are now designed to encourage much longer chains than before, so hardcore scorers will have plenty to keep them busy, though everyone else can get through fine via several other (though less lucrative) point allocation methods, most notably a “max bomb bonus” which builds up as you collect extra nukes. While the aforementioned chaining, though optional, is definitely a memory exercise, most of the previous game’s “out of nowhere” deaths have been exorcised, replaced by more aggressive enemies overall and a more gradual learning curve. The end result is a more exciting and smoother-flowing experience than before, which will almost certainly keep you hooked, and eager for another go even after you’ve finished.

The graphics, while similar in overall “style” to DonPachi, have been given a complete overhaul, and the detailed sprites, sparse rendering tricks, and bebies of neon-colored bullets are still a pleasure to behold more than a decade into the title’s life. The cheese-metal soundtrack is an ideal accompaniment to the fiery explosions and other assorted chaos, though the songs repeat too often for my liking. One annoyance to note, however, is that in this version players will need to turn on the “Wait” option in the pause menu each time they begin, or else the game will run a bit too fast. Another inconvenience that the PS1 version forces you to deal with is that in 2P mode both participants must use the same ship – and even in 1P mode you’ve got to make your selection in the Options menu. Weird. Aside from these relatively minor setbacks, and the rather steep price, DoDonPachi shines at least as brightly here as on the Saturn, and is an essential addition to nearly any shooter fan’s collection.

Everything changed for Squaresoft during the 32-bit era. Among other things, its longtime exclusive relationship with Nintendo came to an end, and the runaway success of Final Fantasy VII catapulted its name to sudden household status within the gaming community. As if the aforementioned wasn’t enough, somewhere in the middle of it all they decided to put out, of all things, a side-scrolling shooter – one with an odd German title (literally, “one-hander”), to boot. Notwithstanding, the title was well-received, and remains one of the PS1’s best-known shmups two generations later – strangely enough though, despite a healthy amount of fan fervor, a sequel has still not come to fruition.

Though you might expect Squaresoft to have made an attempt to redefine the genre, as they did in the RPG realm, they actually chose to stick rather closely, in basic gameplay terms, to long-established standards. You scroll sideways, you shoot stuff with a weak machine gun, your only default weapon...meanwhile your enemies are firing all sorts of nifty stuff back at you. Wouldn’t it be nice to get your hands on some of the bad guys’ big guns for once? Actually, you can do just that – aim carefully at certain enemies’ weapon pods and you can blast them right off, ripe for the collecting, thanks to your craft’s handy-dandy manipulator arm. A choice of three selectable ship models allows you to handle the pilfered weaponry slightly differently, giving you some flexibility in how to approach the game – the ability to adjust your speed on the fly also helps. In terms of scoring, blasting lots of enemies at once increases the point multiplier, so knowing which weapons to take into which enemy formations ahead of time is a must for getting your initials to the top of the list.

As Square was wont to do, it made about the best possible use it could of the PS1’s 3D abilities – while dated

somewhat by now, the overall ambience of the game is still effectively conveyed, and the soundtrack, while relatively standard techno, also does its part in setting the mood. Don't let the attractive settings distract you though – while relatively “modern” by shooter standards, Einhander's not afraid to throw some near-unavoidable deaths at you, not to mention send you back to a checkpoint with all but your default armaments down the tubes. Some players might have been somewhat disappointed that this title didn't change everything, as they might have hoped, but for anyone willing to take some punishment in exchange for the opportunity to hit the baddies with a taste of their own medicine, brush up on your Deutsch and pick this up.

Gradius Gaiden

As gaming lore would have it, Konami had initially planned to bring this storied shooter Westward, but ended up deciding against it – a shame, because not only is Gaiden (“side story”) one of the few Gradius entries created and tailored specifically for home console play, but it's widely considered one of the series' best, and a title that has the potential to appeal even to players who aren't particularly fond of its siblings. As fate would have it, the game did eventually make its overdue trip via the PSP's Gradius Collection, but for those seeking the “original” experience Gaiden did well enough in Japan to earn a budget re-release twice over, so tracking a PS1 copy down isn't too tough or costly.

For starters, this iteration offers you four selectable weapon sets, a la Gradius II, in the form of four distinct ships – more importantly than that, however, you also get to choose from four shield varieties, and are even given the otherwise unheard-of ability to rearrange your power bar. That's right – if you want the Option or Shield section positioned at the far left for easy access, go right ahead and plunk it there. These tweaking opportunities give you much more freedom in terms of playstyle than almost any other Gradius – now you can build your strategy around everything from quick, frequent invincibility bursts to hugging the ceiling and bombing away. Once you're set up and ready to go the game plays more or less like a “classic” Gradius, though now you can also power up your Missile, Double, and Laser to “level two” if you select any of them twice.

The game's look, for its part, is what I'd define as “attractively understated” – while few areas will make your jaw utterly drop in terms of what they throw at you visually, everything from the first level's snowstorms to the second's heaps of scrap metal to the third's refracting crystals, and so on, looks good without drawing undue attention to any specific aspect of itself. The music is similarly suitable, though again not to the point of distraction. Aside from what's already been said, all I can think to add is that Gaiden is considered to be one of the easier series entries, though considering how difficult the rest are that's not saying a heck of a lot. All told this is probably the best place to go for an introduction to the “classic” Gradius experience, as it's hard to argue that it's been done better anywhere else.

Harmful Park

Chances are that even most longtime gamers have never heard of Sky Think Systems – this is certainly understandable, considering that, aside from a pair of puzzlers (Kururin Pa! and its sequel), this was their only commercial game, and none of the company’s output ever left Japan. Quite a shame, I have to say, considering that Harmful Park is one of its era’s most unique and fun shooter offerings, combining a multi-faceted scoring system with a healthy dose of cheery eccentricity. A meet-up with this rare title will cost you, though (frequently to the tune of triple digits), so it’s good to know exactly what you’re getting before taking the plunge.

Charged with the task of taking back an amusement park from an evil scientist, you’re equipped with a (potato) gun, (ice cream) laser, (pie) grenades, and (jelly bean) homing shots, each of which can be accessed either via “scrolling selection” or assignment to a specific button. Each is powered up individually, which takes awhile, but in exchange only the weapon you’re using is powered down upon death – your current armament also determines the effects of your bomb. You’ll want to learn how to use each effectively, since aside from collecting gems and other items your main source of scoring potential is the ability to take down multiple enemies in a single shot – for instance, horizontal lines of them are best handled with the laser, close groups with the grenades, and so forth. Oftentimes setting up rivals for a lucrative kill can be risky, not only to your “shoot down percentage” bonus but also due to the occasional and frustrating “come-from-behind” assaults that can pick you off if you’re not paying attention.

While both surviving and scoring are fun in and of themselves, the game’s real claim to fame is in the trimmings – while the raw quality of the graphics isn’t particularly impressive (some animations in particular are rather stiff), the wacky enemy and level designs, including a host of visual puns, are still a hoot to see in action, from popcorn poppers of death to zombie elephants to an inflatable dinosaur boss. It’s all so constantly and unapologetically silly that you can’t help but enjoy yourself – if you need a break, though, the programmers also included a trio of minigames, based loosely on Pong, Combat, and the versus racing sections of Sonic 2, all of which support multiplayer. While the game is not very challenging on “Normal” and below, turn it up any higher than that and you’ve got a fight on your hands – however you play this, though, you’re all but certain to get back in line for another ride afterwards.

Raiden Project

Regarded by many shmuppers as the first truly “arcade-perfect” console shooter port, as well as the first to include a vertical-screen option, this early PS1 release is a compilation of top-down standard-bearers Raiden and Raiden II, and was considered viable enough to receive releases in all three regions. All of the localizations play well, though the US version lacks true Tate mode (however, if you have a Gameshark there

is a code to “unlock” it) and the Japanese version (which got several re-releases) is missing some of the “restart” options included in the Western iterations. Minor differences notwithstanding, just about any shmupper should have this in their collection.

Ask most non-shmuppers to name any random shooter off the top of their heads – if they don’t go with *Gradius*, *R-Type*, or an older title like *Galaga*, they’re likely to mention *Raiden*. While its relatively unexciting pseudo-futuristic military trappings won’t stand out much today, that’s largely because this is the title that set in place much of what we now consider “stereotypical” genre features. You’ve got 2 types of weapons and missiles to (very gradually) power up, a bullet-eating bomb (with a nasty startup delay), a big hitbox, and yellow enemy bullets (which are likely moving faster than you can) to dodge. Scoring doesn’t go much beyond fixed-value medals and shooting things, so anyone in the mood for some old-style blasting (and not much mercy) will be greeted with open arms.

Raiden II hangs on tight to many of the elements introduced in its predecessor, but takes them a step further – the same basic setting and overall styling is here, but the detailing has been improved, making the *Raiden* world a good deal more attractive than it was initially. You’ve also got a new third weapon to collect (the famous purple “toothpaste laser”) and, if you use the 2P ship, a faster-activating (albeit weaker) bomb, as well as slightly tweaked movement. By default, you also instantly respawn after death instead of being sent to a checkpoint. While not a drastically different experience from its predecessor otherwise, the extra level of polish is still very much worth noting. The ports of both games, as mentioned earlier, are pretty much spot-on – while there are few extras to speak of, the optional arranged soundtracks are a nice touch.

As a closing point, there was a 2002 Japan-only release, also on PS1, of the first *Raiden* (and the first one only), under the “Major Wave Arcade Hits” label – it’s not expensive or hard to find, but if you want both *Raidens* make sure to stick with Project.

Find *Raiden Project* on eBay

Raiden DX

At first blush this might look like a “remix” of *Raiden II*, and on a VERY basic level that’s what it is, but dig a little deeper and you’ll find a lot more on offer than a mere rehash. First off, the game features three separate, and somewhat misleadingly-named, modes to play through, each with its own layout and rules – “Training” (more or less a “score attack” mode featuring one long level), “Novice” (the first five areas from *Raiden II*), and “Expert” (a full eight stages based on, but different from, *Raiden II*). While you’ve got the same weapons and whatnot from the previous game, nearly everything else has been given an impressive overhaul.

The main addition that DX offers over its brethren is a load more scoring variety and depth. Remember those plain ol’ medals from before? Well, now they decrease in value if you don’t grab ‘em quick – however, if your timing’s good, you can actually turn this new feature to your advantage. After a medal wears down to its lowest value, it will flash for a split second – grab it right then and you’ll be rewarded with several times its original value in points (same goes for the “Miclus” dragons, when they show up). Also, by hovering over certain spots for a moment or two, you can reveal secret landscape features to blow up for additional bonus points. Bosses are now timed as well, and worth more if you can find ways to kill them quickly – finally, certain risky/aggressive behaviors (like zipping through narrow spaces between bullets) will also add to your score. And we’re not quite done – aside from the points immediately awarded to you during a stage, you’ll also have everything tallied up at the end of each level for additional rewards, so to max out your scoring potential you’ll want to do as much of everything as you can. In short, a formerly simple

shooter has become a score attacker's paradise.

The icing on the cake is that, while the arcade rendition of DX was pretty full-featured on its own, the PS1 port (the only home conversion ever released), not content to simply replicate the original faithfully (which it does), has a load of exclusive (and great) extras. Not only can you adjust your autofire rate, record replays, and unlock a boss rush mode, but also watch a superplay, check out an image encyclopedia, and choose between three different in-game soundtracks (including that of the arcade-exclusive Viper Phase 1). Long story short, if you like Raiden, you'll be in heaven here. And even if you don't, it's still worth your while to give this entry a try – you might be surprised at how addictive it can be.

Kyuiin

So a fairy has popped up out of your favorite fairy tale book and asked you to help rid the happily-forever-after realm of an evil wizard who's been messing up the stories. You readily agree to go, but then she inquires, if you're going to serve as a hero and all, where do you keep your fighter jet? Being a regular kid, of course, you possess no such thing. Maybe a giant robot, she asks? Sorry. A quick glance around the room reminds you, however, that aside from a little sister to serve as Player 2, you do have a vacuum cleaner handy... No, I didn't make that up – that is, indeed, the sequence of events that leads you, in Kyuiin (pronounced similarly to “queen,” it's meant to evoke the sound of a vacuum cleaner's engine), to ride around on a Hoover fighting giant frogs and who knows what else. Despite the kiddy trappings, there's some score attacking to be done here – while shooting enemies with one of four collectible weapons will take them down, for more points you'll want to use your vacuum hose to suck smaller ones up (and use them for bomb ammo) and sneak behind bigger ones to whack them with the electrical cord. Basically, you'll want to do as little shooting as possible to come away with the most impressive numbers – some might be turned off by this, though others are more likely to appreciate a departure from the shmupping norm (in case the thematic elements weren't already enough).

Unfortunately, past the unique ideas the game runs into problems – for one thing, your character is both large and vertically-oriented, which by default makes evading attacks tough. Also, while your vacuum can slurp up some bullets as well as enemies to make this task a bit easier, the hose constantly wriggles up and down on its own and cannot be frozen in place, which frequently allows a stray small fry or its shots to sneak in and nail you. Though you can take two hits before dying, the initial one will knock off the vacuum's hose and your bullet-absorbing ability with it, making surviving long enough to encounter a repair kit even harder than playing “normally”. On top of this the mixed 2D/3D graphics come off as rather mediocre overall, though the soundtrack is surprisingly rich. Finally, while the game got a “Best” reprint, it's still hard to find – all told, the game's unique play mechanics can be fun, but this unusual tale is definitely not one for the masses.

Plenty of shooters have been clearly influenced by various anime over the years, but few wear this fact on their sleeves as proudly as 70's Robot Anime Geppy-X, a parody of/tribute to the ever-popular "giant robot" subgenre masquerading as a shoot-em-up. Spanning an almost unheard-of four discs, there is a truckload of stuff here to make mecha fans giddy or cause them to laugh out loud – levels are grouped into pairs and set up as television "episodes", complete with opening and ending theme songs, and even a commercial break in between, hocking fake Geppy products, from action figures to shampoo. Over-the-top voice acting, retro-styled character designs...you name it, it's probably in here, impeccably preserved.

Of course, there's also the matter of how the game actually plays – as your robot scrolls sideways, you can use the trigger buttons to shift between 3 different forms at any time. Each transformation has a "main" and "sub" weapon, both of which can be charged up for a more powerful attack, but also must be leveled up separately – other than that, you can turn your mech around to attack enemies behind you, and unleash an occasional screen-filling super attack. You've got a basic set of weapon powerups and health refills, but otherwise your only goal is to get from one end of each stage to the other intact. It's a cool enough setup, but the interface is a bit clunky – your robot, as you might expect, is a big target, and hesitant to react to certain commands (i.e. you can only turn around or transform when you're not doing anything else, including shooting), which makes quick responses to many threats on the player's part all but impossible.

As was mentioned before, all the retro-cheese is great, though in similar fashion to a TV series DVD marathon you'll wind up skipping the theme song and other repeating segments after you've seen them a few times. Progress in the game itself is also something of a drawn-out affair – your life meter does not refill between stages, and your weapons are reset to square one if you load up a saved game, both of which can put you in a tight spot very quickly, especially as you get farther in – to reach the end you'd best be prepared to conquer the whole thing in one go. All told, old-school robot fans will want this just to give their nerd cred the mother of all shots in the arm – those looking for solid shooting action might want to hesitate, especially considering how rare and costly this one tends to be.

R-Type Delta

While the Saturn was king on the shmup front when it came to exclusive arcade ports, the PS1 bested it by a wide margin in terms of unique console-only offerings, including this, the first R-Type game to opt for a polygonal presentation. While those once-impressive visuals have obviously aged a bit by now, the overall design and ambiance are still strong – more importantly, however, Delta introduced several new elements into the series' long-running formula, which were carried over into R-Type Final on PS2 and established as

constants for the rest of the series' unfortunately short life...well, at least until R-Type Tactics and R-Type Resurrection were announced.

As always you've got your Force pod, bit options, and 3 collectible weapons plus bombs and missiles, but the speed ups are history, as now you can (and at times, must) switch between four movement settings at will. Of course, you can also select three different spaceships to commandeer, all with differently-behaving Forces and weapon sets, a la R-Type III – this gives you some nice flexibility in terms of play style, i.e. do you prefer having your Force chase after enemies and blast them automatically, or maybe latching it onto rivals and using the “umbilical cord” which stretches between it and your ship to block bullets? The most noteworthy addition, though, is the “Dose” meter – if you use your pod, as opposed to your shots, to damage enemies and absorb bullets, the meter will gradually fill. Once maxed out, not only does the Force do additional damage, but awards extra points when used offensively, as well as a single-use screen-clearing attack. Survival is still task one, but now you'll also need to apply a little extra technique in order to give yourself the best shot at the clear, not to mention a high score.

Of course, all the new stuff doesn't affect the series' main claim to fame, namely its reliance on repeated playthroughs and memorization of stage layouts to guarantee success. Granted, if you have a “bomb” stocked it might save you from some sneaky rear-attacking drones in close quarters, but it won't do squat when a gigantic mech foot is heading for your cockpit because the screen didn't scroll as quickly as you'd hoped. So long-time players needn't worry, they'll be right at home here – further, many of your fellow faithful consider Delta to be perhaps the finest of its series in terms of overall design, as well as a good place for R-Neophytes to begin. While the game was released in all three territories (with an unlockable gallery and some nice player stat tracking intact), there's still some demand for it on the second-hand market, so be prepared to search a bit before reeling in a copy.

GunBare! Game Tengoku 2

Following their hijinks in the Saturn-only port of the first Game Tengoku, Jaleco's motley crew of video game and anime spoofs apparently felt like changing things up – not only did they decide to put down roots exclusively on the Playstation for this followup, but in the process left behind their sprite-based origins in favor of a 3-D makeover. Not stopping there, they also decided to tack on a feature not seen in any other shmup to date – instead of having the second player pilot an additional onscreen ship as usual, here your partner will have to pick up a Guncon and blast enemies with it, a la Lethal Enforcers or Time Crisis, even as you fly around and dodge bullets as per usual. Apparently collecting eggplants for bonus points wasn't wacky enough.

While most all of the basic features of the first game are still here (a decent character selection, score attack mode, the aforementioned eggplants), quite a bit has also changed – for one thing, you've got a Raystorm-esque lock-on cursor now, which allows you to attack background enemies, but it feels very tacked-on, as it can only track two targets at a time, takes forever to find its mark once fired, and doesn't affect scoring at all. Unfortunately, Raystorm's “uphill” perspective is also along for the ride, and can prevent you from moving to the far edges of the screen, making collecting items and dodging shots a real pain. Even any sort of “traditional” stage structure has been deep-sixed – instead of working toward the one-credit clear, you simply select one stage at a time (out of five, with a sixth unlockable), and when it's done you select another. There's no “total” high score to shoot for, just per-stage records. To sum up, while the first game felt like a shooter with some “fan service” elements attached, this one is more along the lines of a fan disc with a shooter clumsily duct-taped onto it – your main “goal,” when you get right down to

it, is to use the eggplants you collect during the levels to buy various video clips and other things (you can also use them to give your character more power at the start of each stage, but it's close to cheating, as the game's not very challenging to begin with). While the trademark humor is thankfully intact, and certain segments in particular are a hoot (this time they're skewering vector graphics and Tamagotchi-esque virtual pets, among other game-related targets ripe for the picking), most of the graphics have aged badly, and all told it can only be considered a step down from the first entry. I wish I could recommend this one without so much hesitation, but I'd advise shmuppers to think hard and honestly about just how much they liked the first game before springing for the sequel.

Geki-Oh Shooting King

On technical merits alone, this port of Shienryu is inferior to its Saturn equivalent – scores are not saved, tate mode is nowhere to be found, and there's some extra slowdown present. There are also, however, three things that Geki-Oh can claim which its counterpart cannot – it's inexpensive, it's available in all three regions, and it has a few extra modes thrown in. As such, if you're unable to acquire (or play) either the Saturn port or Double Shienryu on the PS2 this isn't a bad pickup.

In terms of the basic nuts and bolts the “main” Shienryu on offer here is mostly unchanged from its arcade and Saturn counterparts – you've got three collectable weapons, some bombs, and some basic score items to collect as you blast whatever happens to be in your way, most notably some sort of big mean mecha-dragon. While Geki-Oh boasts of having nine different modes to try, three of them are simply “easy”, “medium,” and “hard” difficulty variations of the arcade game, and two others (“Comical Mode” and “Ancient Mode”) are identical to “normal” mode except for some silly presentational alterings.

The other variations are a bit more interesting – “Stingy Mode” is sort of a 2-stage score attack, which gives you no power-ups and makes all enemies worth only 1 point, while “No Mercy Mode” speeds up enemy fire to the point that you pretty much can't stop moving without being hit. Danmaku fans might enjoy “Slow Mode,” in which enemy bullets are far more numerous but are also slowed down, along with your craft's movement, encouraging lots of pattern weaving – weirdest of all is “Pocket Mode,” a simplified shooter in every sense of the word, which looks like it could have been created for the Japan-only Pocketstation peripheral. All told, while this isn't the best version of the core game available, the extras are interesting (and the price is low) enough to still make it worth a look.

In a way, you might consider this the Radiant Silvergun of the PS1...by “in a way,” of course, I mean “in terms of price,” as this is probably the most expensive shooter on the system, and also much harder to come across than Silvergun. So what do you actually get for your efforts if you determine to add this one to your collection? Well, it’s definitely not as unique or “epic” as Silvergun, though that in itself isn’t necessarily a bad thing – in a nutshell, this is a solid pickup in most respects, though its rarity, and the corresponding price spike, likely put it out of the grasp of all but the most devoted shmuppers.

Off the cuff, this game is most similar to the early-to-mid entries of the Darius series – you have a “main” and “sub” weapon (actually, 2 of each to collect), a shield (which regenerates when not being hit), and no scoring system beyond collecting surplus powerups and destroying enemy formations. Aside from an occasional “intense fire” power shot, that’s about all there is under the hood – up on the surface, the graphical quality is nothing particularly notable, though the settings are evocative and change frequently, always giving you something new to look at. The music is also varied and not a bad listen at all.

Decently-traveled shooter players will notice, in addition to the aforementioned Darius elements, references to (or ripoffs of, depending upon how cynical you are) several other shooters – Gradius fans should definitely feel at home while fighting the third boss, for instance. In any event, the only thing aside from the price tag that keeps me from recommending this one is its overall low level of challenge – despite three difficulty settings to choose from, the regenerating shield (on TOP of multiple lives) makes the journey less than taxing to complete, and may make some wonder if the trip, pleasant as it might have been while it lasted, was worth the investment.

Bokan Desu Yo!

While the first Bokan shooter made an appearance on both of the “main” 32-bit systems, this followup, for whatever reason, ended up as a Playstation exclusive (and, surprisingly, got a limited PAL release as “Time Bokan: Yatterman”). Once again you’re walking (or pedaling) in the shoes of the ever-popular Tatsunoko villainess Doronjo and her hapless flunkies, determined to deliver a heaping helping of anti-justice to those pesky costumed superheroes. Those who played Bokan to Ippatsu! shouldn’t have too much trouble settling in, though there are a handful of differences worth taking note of between the two games.

For one thing, there are two modes to choose now – a “normal” game as well as the “special” mode, which plays identically but throws in a few extra levels, different cutscenes, and an additional selectable vehicle once you’re partway through. Otherwise all nine of the tanks, airplanes, and other wonky rides from the first game are available from the start, though some of their weaponry has been changed around – of course, you can still collect skull icons

for temporary invincibility, though you now have the handy option to activate it whenever you want, rather than being forced to use it as soon as the meter's filled up. You're also still packing unlimited bombs, and this time, if you're willing to take the risk of holding onto a loaded one for a few moments, you can power it up into an even bigger dose of exploding death.

The latter addition, however, can't help but feel somewhat wasted, since the last game's main scoring tactic, namely destroying multiple enemies with a single bomb, is nowhere to be seen, replaced instead by collecting the red gem point items as quickly as possible. Otherwise the game plays pretty much identically to the first...and, many shmuppers will be dismayed to learn, isn't any more challenging than its precursor either. All told, despite the tweaks described above, a safe rule of thumb here is to recommend this to players who enjoyed the first Bokan shooter and its cartoonish goofiness, while advising those who didn't to continue to keep their distance.

Bokan to Ippatsu! Doronbo: Time Bokan Shirizu

Aside from the slightly different title, a handful of minor presentation differences, and the existence of a "Best" reprint, this is the same Bokan game as was released on the Saturn. You've got the same garage of garish super-vehicles, the same unlimited bomb stock, the same ability to roll out of the way of enemy fire, and the same meddlesome heroic types in need of a serious TNT-applied attitude adjustment.

While not a bad play-through, the theme and relative lack of challenge will put off "serious" shmuppers as much as ever – as with many other PS1 shooters, though, this one got a reprint, so it might be cheaper to find on Sony's system. On a final note, be sure not to mix this one up with the subpar racing game Bokan GoGoGo, also released on the PS1.

Raystorm and Raycrisis

While the Playstation version of Raystorm, a 3-D followup to Layer Section, lacks some of the extra content from the Saturn version, which was released later on, the system's more advanced 3-D capabilities result in a better-looking game overall – further, thanks to the cleaner presentation, there are fewer issues in spotting enemies and bullets amidst all the floating polygons, so the playability improves a bit too. Thus, for most players, this is the preferred port on technical merits, not to mention the easier one to find, having been

localized to all three regions, unlike its counterpart.

The basic idea is similar to its predecessor, except with a slightly “tilted” vertical-scrolling perspective – aside from your basic blasters you’ve got a lock-on cursor floating in front of your ship, which allows you to fire homing projectiles at anything that passes under it, and the more enemies you can waste at once the more points you get. A few additions, most notably a second selectable ship and a smart bomb, give you a bit more flexibility, but you’ll still end up being taken down by unforeseeable threats much of the time. Only minor changes were made for the localization, so purists shouldn’t have many issues here – on the flipside, however, it’s definitely not a newbie-friendly title, at least on default settings.

Raycrisis, the final entry of the “Ray” trilogy, is actually a prequel to the other two games, and sends you flying around inside the brain of the computer that you’ll find yourself fighting from the outside in later entries. As a result your surroundings are more surreal and free-form than before, covered in wonky colors and populated by even weirder enemies. The basic gameplay isn’t too far removed from Raystorm, though one addition of particular note is the “Encroachment” meter – basically, any enemies you fail to destroy will increase the meter, and if it gets too high the current level will end early, landing a blow to your scoring potential. This makes getting through the stages a more frantic affair for score-crazy types, as they’ll be unable to risk spending too much time setting up juicy multiple kills – while it can be argued that this feature allows for a bit of flexibility in terms of difficulty depending on the player’s potential, many simply find it to be more irritating than it’s worth.

Other than that, the only other changes worth mentioning are a third selectable ship, several color choices for each, the ability to pick three of the first five stages to go through, and a “Special Mode” which sends you through all the levels in one fell swoop, but with fully-powered weapons and a few system changes. Working Designs also insisted on keeping Pocketstation support for the localization, so anyone who imported one can load and play “PocketRay” on it. Import-savvy types might be interested to know that a “Double Shooting” compilation featuring both Raystorm and Raycrisis in one package was released in Japan – not a bad way to get ahold of both in one fell swoop. One final but important note is that there’s a bit of “drag” on the ships in both of these games, which will pull them slightly toward the center of the screen after they stop moving – it’s not a game-killing issue on its own, but enough of an annoyance to put some off.

G Darius

While Darius Gaiden managed to swim its way onto both of the 32-bit systems, its followup (and the final Darius game to date) was only ported to the PS1, and was a system exclusive for a long time, until the Taito Memories collections on the PS2 hit the shelves. There are various theories floating around as to what exactly the “G” stands for, though about the most credible I’ve heard is that it’s short for “Genesis,” as this game supposedly occurs earliest in the series’ timeline. In any event, aside from the distinction of being the only Darius to use polygonal graphics, this title is notable for its numerous additions to the stubbornly basic workings of its ancestors – many players (even quite a few sprite lovers) have taken such a liking to these new features that they’ve praised this entry as the best Darius game released.

The standard blaster/bomb/shield weapon combo is still here, of course, though as in Gaiden once you’ve reached a certain level you can’t be powered down below it. Moreover, this time around you can not only capture and

“convert” mid-bosses, but almost any non-boss enemy in the game to help you out, via a limited supply of “capture balls.” Your bomb stock is gone, but replaced with a more interesting feature – remember those captured enemies I mentioned a second ago? If you don’t need them fighting alongside you, you can sacrifice them either to clear the screen of small fry, or to fire up an Enormo-Beam o’ Death – of course, bosses have access to their own EBoD, which gives you the opportunity to pit yours against theirs and mash buttons in an attempt to do massive damage, a la Metal Black. While interesting to mess around with in and of themselves, taking advantage of captured enemies and their various uses is also essential for scoring.

While the port replicates the look of the original faithfully (not too surprising, since the arcade version ran on Playstation-based hardware), it is unfortunately plagued with a good deal more slowdown here than it was there – on the plus side, the game includes a unique Boss Rush mode, and also earned itself a trip to all three regions, making it easy to find. Of course, being a Darius game, you’ll be faced with lots of seemingly-impossible challenges until you’ve memorized where to dodge and when the best time is to bring out your big guns, but anyone who’s played the series before already knew that. If you’re up for this most non-traditional of fish fries, the PS1 is a good place to fill up your plate.

In the Hunt

Irem’s unique submarine shooter rises to the surface on the PS1, and despite the system’s purportedly inferior 2-D abilities, actually turns out a bit better here than on the Saturn, having largely exorcised the latter’s slowdown problems. As on Sega’s system the game managed to secure a release in all three regions (not to mention, surprise surprise, a reprint in Japan), so it’s not a particularly tough one to locate on the radar (sonar?) either.

Of course, even with the improved speed all of the game’s innate problems are still floating around, most notably a sluggish player craft that’s frequently forced into areas which greatly restrict movement – not the most appealing of combinations, especially when you’re being shot at. You do still have the unique setting and detailed sprite graphics though, so you could certainly do worse than this as far as a cheap pickup for your PS1 is concerned – heck, you even get an optional arranged soundtrack and slightly easier “Playstation Mode” included alongside the arcade originals. Just keep in mind that the developer is best-remembered for R-Type, not this.

R-Types

Speaking of R-Type, for reasons unknown, Irem felt compelled to offer most of its shooter love to the PS1 during its heyday – aside from its most famous exclusive offering, R-Type Delta, the company's most notable gift was this simply-titled compilation of R-Type and R-Type II, the first arcade-perfect home ports of both titles. Many long-time shmuppers hold the original game in particularly high esteem, especially considering its release date, for its unique level designs and the debut of the handily indestructible "Force" device, which could be attached to the front or back of your ship or left to float free – you'll need to memorize the layout of the levels to use it most effectively though, as a sudden rear attack is frequently tough to react to unless you've got everything in position ahead of time. Aside from a small selection of weapons and accessories you've got no "get out of jail free" cards either, so be prepared to Blast Off and Strike the Evil Bydo Empire many times before succeeding.

R-Type II plays nearly identically to the first, though you've got a few more laser and missile choices, along with the ability to charge up a stronger beam cannon. There are also fewer stages this time around, though you'll still be hard-pressed to make it through them all in one credit. Alongside the games themselves is a small but nice selection of extra content, including enemy and ship data, a rundown of the story's chronology (R-Type being one of the few shooters that bothers to include much of a backstory to begin with), and the ability to skip ahead to later stages instantly to practice. All three regions were treated to this release, so unless you're particularly turned off to older or memory-heavy titles you owe it to yourself to snap it up.

Strikers 1945 II

The PS1 avenges itself upon the Saturn after the former's lackluster port of the first Strikers sent Psikyo fans over to Sega's side. This time around, not only is the Playstation edition the better of the two, but the game makes its way overseas to both the USA and Europe – of course vertical mode was cut and it was confusingly renamed to plain old "Strikers 1945", but whatever. There's nothing much to mention in terms of extra features, but a well-done port of the arcade original is no bad thing, especially to aficionados of Psikyo's style. Of course, most of this game's audience likely knows the basic drill already – World War II setting with giant robots, random opening stages, orange bullets, and memorization tactics.

Indeed, this title plays very similarly to the original Strikers 1945, and thus much of Psikyo's previous output as a whole – for one thing, it retains the scoring system of the first, which rewards you for collecting point items at the right moment. The only real major change, aside from a slightly reworked roster of airplanes, is a new charge shot system – you can still charge up more powerful attacks like before, but this time there's a meter which affects how

strong it will be. As you shoot down enemies with your “uncharged” weaponry it will slowly fill, up to a maximum “level” of three – a fully-charged blast can inflict huge damage, even on bosses, but can’t be used often, as the meter will empty afterwards. Thus, you’re forced to strategize to a greater extent than before – do you want to use a few weaker charge shots to make the stages easier, or save it all up for a swift takedown at the end? All told, if you don’t mind adding another Psikyo title to your collection, take a little time to find this – and guess what, this one is yet another member of the “budget reprint club” in Japan, so importing it should be cheap as well, if you’d rather not deal with the shortcomings of the localized versions.

Thunder Force V: Perfect System

After witnessing the solid reception that their 3-D Thunder Force got on the Saturn, Techno Soft decided to send it over to the PS1, saddled with a few extra features – now-defunct publisher Working Designs also took notice, and determined to release the game in the US, with another handful of changes, most notably in the form of a few hidden ships and modes, which become available after completing the “regular” game. As was mentioned in the Saturn section, the presentation here is actually worse than it was on its original console, especially in terms of the backgrounds, which look far flatter and more lifeless than before – considering that this edition was touted as an improvement over the former release, not to mention the PS1’s reputation for beefier 3D abilities, it’s a strange and slightly disappointing sight to behold.

Just about everything else, for its part, has survived unscathed – all the stages, weapons, and other features, plus the extras, are all present and accounted for. As on the Saturn, though, this is a double-edged sword, since the newly-added “kill things quickly for more points” scoring system is thrown out of whack (along with much of the rest of the game) by the super-powerful Free Range weapon, which is nigh-unstoppable when you have it and sorely missed when you lose it. Of course, those who enjoyed blasting stuff with wild electronic rock tunes wailing in the background in the earlier entries can certainly still do that here, which isn’t a bad thing to have on your resumé. One final feature that this title shares with its Saturn counterpart is a reprint of the Japanese release, so a little effort should see you through if you’re looking for this.

Zanac X Zanac

Another sought-after PS1-exclusive shooting specimen, this compilation of

old and new served as the swan song of longtime developer Compile, noted by shmuppers for Blazing Lasers and its ilk, but known to most as “the Puyo Puyo guys.” While three and a half slightly-varying versions of the original Zanic (Disc, ROM, Arranged, and Score Trial) are included here, the real showpiece is an entirely new chapter in the series, Zanic Neo, which brings the series closer to “modern” shooter standards. While some of the company’s castoffs can be seen more recently in the credits of releases by Milestone and Compile Heart, this is the original group’s final project, and a must for fans of their older work – your devotions will certainly be tested, though, as this is one of the rarest and costliest shooters on the system, frequently breaking the Ben Franklin barrier.

What may strike you most about the original Zanic is how manic it is, considering how long ago it was unleashed upon consumers. Stuff comes flying from all directions with surprising frequency, and you don’t have a modern-sized hitbox or smart bombs to bail you out – what you DO have is a moment of invincibility whenever you snag an item, which you’ll need to learn to use to survive. Otherwise you’ve got a basic blaster and a selection of eight subweapons (most of which are controlled by a second button) to see you through – while the game varies what it throws at you somewhat based on the weapon you’re using (a unique feature at the time, and even now, really), you can still find yourself dying repeatedly after screwing up once, thanks to low post-death invincibility time and a long road to maximum weapon power. Of course the graphics and sound are also quite outdated, but on the whole even those who prefer more “advanced” shooters might find themselves surprised at how much they find to like here.

On to Zanic Neo we go – while the visual and aural face-lift (bringing the series to somewhere between 16- and 32-bit standards in terms of its presentation) is the most obvious new feature, there’s quite a bit more to have a gander at. You’ve still got the same core main/sub weapon setup, but now you can select from three ships (and a fourth unlockable one) to further vary your enemy-blasting possibilities – moreover, you’ve now got a “charge shot,” which can set off chain reactions (and point bonuses) among enemies close to its target, as well as cancel bullets, though it needs time to recharge between uses. There’s also a simple “chain” scoring system – as long as you don’t let any enemies escape without being shot down, your score goes up faster than normal. Of course, missing that one speedy bugger can be frustrating, as can semi-frequent “what hit me?” deaths, though a generous extend rate (another carryover from the original Zanic) helps to offset them (perhaps a bit too much). While Neo isn’t as far removed from its predecessors as some might hope, others will love it for that same reason – which camp you belong to will likely affect how willing you are to hunt this elusive package down.

Capcom Generation 1, 3, and 4

These compendiums of Capcom classics are pretty much exactly the same as their counterparts on the Saturn, save for two facts of interest – first, each of these titles (as well as Volume 2, which contains Ghosts n’ Goblins and its two sequels, and Volume 5, a Street Fighter collection) got two reprints in Japan, making them possibly easier to track down, and second, the first four volumes were bundled together and released in Europe, a boon to PAL gamers looking for an old-school fix. Otherwise, these are the same arcade-accurate ports with a bit of fan-friendly extra icing on top. A quick overview of each:

Generation 1 includes 1942, 1943, and 1943 Kai, three of Capcom’s most famous early shooters. As the titles suggest you’ve got a World War II setting on your hands, though obviously things have been spiced up a bit – 1942 is the most basic of the bunch, but also the preferred game for some, thanks in large part to the “fuel” meter introduced in 1943 and carried over to its “remix,” Kai. While the later games have better presentations and more varied weaponry, the

traditional “lives” have been replaced with a “fuel” meter which constantly decreases and must be maintained by refills. While relatively unique, some consider it more of a hindrance than an enhancement – in any event, for others this trio might be worth picking up for the games’ historical influence on the genre, if nothing else.

Capcom’s time machine heads about as far back as it can go in Generation 2, which features *Vulgus* and *Exed Exes* as well as two non-shmups. Both titles are very basic, especially the former, which is the first game Capcom released – about the only things it has over *Space Invaders* are background scrolling, more advanced graphics and a limited-use missile weapon that can destroy a line of enemies. *Exed Exes* adds in a few more powerups, bonuses, a bullet-clearing bomb, two-player mode, and some slight technical upgrades, but both games have a tendency to flood the screen with enemies whose numbers are hard to control with the basic weaponry you’re given. If that sort of setup has a tendency to frustrate you, hesitate before you plunk down the cash for this one.

While the only candidate on Generation 4 that might qualify as a “true” shmup is *Gun.Smoke*, I figured I might as well devote a few words to *Commando* and *Mercs* as well for the heck of it. The first title replaces the usual flying spaceship with a walking cowboy, and gives you three separate buttons to aim his guns at five different angles to take down a seemingly endless supply of bad guys. *Commando* doesn’t scroll automatically, but allows you to aim your machine gun in eight different directions, or toss a grenade forward to take out covered adversaries – its sequel, *Mercs*, runs on the same basic concept, but spruces up almost everything, from the graphics to the more varied weapons and settings. Anyone who enjoys *Shock Troopers* or other such games should be interested in a look at some of the genre’s front-runners on offer here.

Konami Deluxe Packs

As is the case with the Capcom Generations collections, Konami’s shooter compilations are equally well-executed on the Saturn and PS1, though the latter’s editions, as usual, ended up getting a bunch of reprints (oddly enough they’re still not much less expensive than their counterparts). While lighter on extras than Capcom’s similar offerings, it’s tough to complain about arcade-perfect ports of some of the company’s most notable shooters, especially if you’re not interested in the recent PSP equivalents. Again, a quick overview – Let’s start with the *Gradius Deluxe Pack*, which includes the first two arcade entries in the series. The original title, as you’d expect, introduces many of the set pieces that the games became famous for, such as the power-up bar, orange-oval options, and ring-spitting Moai heads. It’s pretty basic compared to its descendants, but is still surprisingly fun even today. *Gradius II* further refines the formula, giving players a greater selection of weapons and a more personality-infused presentation – the famous announcer got his start here. As with any *Gradius* game these two can sometimes frustrate if you die and lose all your enhancements in a tough spot, but if you can get past this rough patch you should be in for a pretty good time.

On its heels is the *Parodius Deluxe Pack* – as with its inspiration, the first two arcade-released *Parodius* games are found here. The two play nearly identically – that is to say, like *Gradius*, but with a few extra features, such as the bells from *Twinbee*, stuffed in here as well. The only major difference is that the second, *Gokujo*, has more characters and a wackier, more entertaining presentation, though the first certainly isn’t without its notable moments (giant invincible Vegas dancing girl, anyone?). Otherwise, with the addition of the crazy humor, almost everything that I could say about the *Gradius* games applies here in equal measure. As on the Saturn, PAL gamers were treated to a localization (under the simplified name “*Parodius!*”), though the USA was once again left to do without.

Switching things up a bit with a pair of vertical shooters is the Twinbee Deluxe Pack, featuring the popular Detana Twinbee and Twinbee Yahho! While Detana weirdly lacks a tate screen option, otherwise things are as they should be, presenting a bright, colorful world and a bunch of wacky things to see and (cutely) destroy. Aside from the trademark trimmings, the most notable things about both are the Xevious-style “two-plane” gameplay, which requires players to not only shoot flying enemies but separately bomb ground-based ones, as well as the famous “bell” powerups, which will change their colors (and rewards) when shot. Yahho! adds in a few additional weapon options as well as some of the best graphics seen in a cute-em-up – there’s nothing especially “deep” to be found here, but it’s still fun just to see everything this series’ world has to offer, as long as the sugar-coated setting and some slightly dated mechanics don’t put you off too much.

Last but not least is the Salamander Deluxe Pack Plus – “plus,” apparently, because it includes three games instead of two, namely both Salamanders and the remixed variant, Life Force. Oddly enough, this is the only PS1 “deluxe pack” that didn’t get a reprint, making it the hardest and most costly to obtain. Considered a “sister series” to Gradius, these games contain many of the same elements, though (with the exception of Life Force) they ditch the power-up bar and stick to “traditional” pickups, as well as exchange checkpoints for instant respawn after death, and send you to some vertically-scrolling stages along with the horizontal standards. In some ways the changes are for the better, but sometimes they can also prove extra-frustrating – whether one prefers Salamander or Gradius is mostly a matter of taste.

Jikkyo Oshaberi and Sexy Parodius

While the first three Parodius games saw release on the PS1 via a pair of compilations, the latter two earned themselves stand-alone releases, and are particularly sought-after to boot. In case I needed to tell you this, the ports are just as good here as on the Saturn – neither ever got a reprint, though, so these games are a tad harder to come across than their earlier counterparts. They also play differently in several ways, though most of the core aspects of the former titles are still here in one form or another.

Jikkyo Oshaberi Parodius, also known as “Chatting Parodius,” was originally released on the Super Famicom, with the 32-bit remake attaching the subtitle “Forever With Me.” As the title suggests, there is a background announcer who never shuts up, though you can turn him off in the options menu – the game’s most interesting elements, however, are gameplay-related. While the presentation, as you’d expect, is not quite up to par with most of the other Parodius games, and as a console-based entry it’s a bit easier than the arcade games, it has the largest character roster in the series, as well as the most scoring tricks and extras, including tandem two-player attacks, two “mini-modes” and a bunch of hidden collectible fairies to look out for. One or two of the extras are PS1-exclusive (the Saturn had a few unique offerings of its own), but for the most part the game is the same regardless of system.

Again, the title of Sexy Parodius gives you a pretty good idea of what to expect – while there’s nothing pornographic in here, there is plenty of anime cheesecake and PG-13 innuendo alongside the trademark silliness this time around. Once more, though, the title’s most interesting element is gameplay-related – while you’re completing stages in order as usual, each level has an extra task to pull off (collecting a certain amount of items, shooting down enough

of a particular enemy, etc.) aside from just beating the boss and getting out alive. Whether or not you complete the task at hand determines not only the inter-stage image you're treated to, but also which level you go to next, and eventually the ending you get. Everything else is pretty much the same, except for a new "item" that you can feed other items to make stronger, but overall, so long as the game's shameless appeal to its audience's baser instincts doesn't dissuade them, Parodius fans shouldn't be disappointed. Image Fight and X-Multiply

Irem's semi-obscure and tough-as-nails duo is available on each of the major 32-bit systems, and since both editions are close to arcade-perfect, shooter fans can rejoice – and prepare for a virtual beatdown of epic proportions. There's not much of anything to mention in terms of extras, but there is plenty of challenge for anyone interested in some of Irem's non-R-Type shooters. X-Multiply, a side-scroller, plays most similarly to the aforementioned standard-bearing titles, but instead of a Force device your ship will grow a pair of bullet-blocking metal "tentacles", which react based on the way your ship is moving. You can't detach them to dispatch distant threats, though, so you'll need a slightly itchier trigger finger than usual, not to mention the ability to stomach some really weird settings and enemies – all in all, though, if you like R-Type you're likely to welcome this offshoot with open arms.

Image Fight, one of a select few Irem vertical-scrollers, is actually the first shooter the company released after the original R-Type – as such, despite the difference in screen orientation, the gameplay feels surprisingly similar. While the signature Force pod has been ditched in favor of up to three gunpods (which can be either fixed forward or aimable in different directions based on movement, as well as "thrown" at enemies), and your speed can be adjusted on the fly (one of the earliest appearances of this feature), the same basic memory-dependent strategy for success is required here, and the game will punish you severely until you get it right. That said, the Turbo CD-exclusive sequel is even more merciless, though I don't know how much comfort that'll bring you – either way, if you can conquer this bugged in one credit you've earned yourself some respect.

Konami Antiques MSX Collection Volumes 1 – 3

While the Saturn's MSX Collection is probably better-known, this three-game set was actually Konami's original release of its old MSX titles onto a contemporary system – the "Ultra Pack" on Sega's console came a bit later. Be that as it may, it's pretty obvious that the latter is the better buy, since it collects everything from these three volumes

into one disc and isn't much rarer or pricier. Of course, whichever you end up buying, be forewarned that most of the shooters (about ten in all, depending on how strict your definition is) do not run very well – this isn't the fault of the PS1, but of the original MSX hardware, which all but guarantees you very choppy scrolling and difficult maneuvering, and none of those issues have been touched up at all here. As a result, the games included on these compilations serve best as an “interactive history lesson”, if anything.

Konami Arcade Classics

Released as Konami 80's Arcade Gallery in Japan, this collection is pretty much what you'd expect – ten of the company's oldest arcade offerings, including (of course) four shooters, on one disc. While each of these titles plays well (as should be expected on a console several generations more advanced), the trimmings are scarce – there's little bonus material, and several standard options (including some found in the original DIP switches) are mysteriously missing. Not to mention, of course, that these games are, well, really old. That said, though, Konami hasn't re-released many of these games since, so this package might be your best/only option to relive any fond memories you might have of these titles. A quick summary of the shooters on offer –

Scramble is the oldest of the bunch – it's a pretty basic side-scroller, in which you control a rocket which can fire straight ahead or bomb the ground below, hopefully taking out any missiles or other obstacles in the way. You also, however, have to watch your fuel meter, and refill it by destroying fuel tanks as you coast along (doesn't make much sense, but hey, it's 1981). Super Cobra plays almost identically to Scramble, except you're a chopper this time – both are solid considering their age, though your lengthy craft can be a frustratingly easy target for enemies (and walls).

Time Pilot is a “free-scrolling” overhead shooter, where you're always moving forward but can steer yourself in any direction – using your “futuristic” craft and its basic dot shots, your objective is to destroy a certain amount of enemy planes to advance, while collecting parachuting guys for bonus points. Gyruss is commonly considered the forerunner of the “tube shooter,” though you're technically only in a “half-pipe,” giving it some kinship with Tempest – while synthesized classical tunes warble in the background, you travel through the solar system shooting down formations of aliens while avoiding their returning salvos. Both games hold up surprisingly well, though the fact that you'll likely die not so much via enemy fire as sudden kamikaze attacks can be frustrating.

Namco Museum Vol. 1 – 5 and Encore

While it's likely not the first company you think of when it comes to scrolling

shooters, the creators of Pac-Man and Soul Calibur actually have quite a bit of history behind them in the arcade shmup realm, though most of it stretches back quite a ways. Which is where these collections come in – if you can get ahold of the whole set you'll have nearly 40 of the company's game-room releases from back in the day at your fingertips, nine of which are shooters. Each volume has at least one of those nine on it, so you'll need to seek out all six even if you're just looking for the shmups – fortunately, volumes 1 through 5 were released in all three regions, though Encore never made it outside of Japan. A quick overview of what you're getting with each –

Two shooters, Bosconian and Galaga, are the features of Volume 1. The latter is the first and most popular sequel to Galaxian (featured below) and introduces the series' signature "tractor beam" enemies, which can steal a ship from you, but also give you an opportunity to win it back later and double your firepower. Moreover, you can now quickly dispatch a few baddies as they first spiral into their formation, as well as snap up some bonus points in occasional "challenging" stages. Bosconian is a free-scroller a la Time Pilot, though your main goal, as in Fantasy Zone, is to destroy a set amount of enemy bases, and you've also got a handy tailgun to compliment your nose-mounted weaponry. Volume 2 adds Xevious (which is covered in the Xevious 3D/G+ section) and Gaplus, which builds further on Galaga by improving the presentation a bit, speeding up the overall pace, allowing you to move up the screen a limited amount, and offering an occasional opportunity to turn the aliens' own tractor beam back on them and capture a few helpers of your own. Oddly enough, Galaxian, the earliest release in its series, wasn't added to this collection until Volume 3, where it's the only shooter included – on a basic level it plays similarly to Space Invaders, but with slightly better graphics. The main difference is that while the "main" enemy formation above you doesn't encroach in your direction, it instead sends individual bogies swooping down to try and pick you off – score-attacking snipers can use this to their advantage, as dive-bombing enemies are worth more points than "docked" ones.

The sole shooter offering on Volume 4 is the obscure side-scroller Ordyn, which could be considered a more "traditional" take on Fantasy Zone – while featuring a cute-em-up atmosphere (and nice graphics overall) as well as a similar shot/bomb setup and purchasable weapon upgrades, it ditches the Defender-esque stage layout for a "straight" left-to-right progression. Volume 5's contribution is Dragon Spirit, basically a legendary reptilian take on Xevious, with air and ground targets as well as separate powerups for your two weapons – despite the advancements, however, it doesn't feel like much of a step up from its inspiration. Finally, Encore finishes up the collection with Dragon Saber and Sky Kid – the former, obviously, is a followup to Dragon Spirit, and adds more interesting settings as well as instant respawn, default rapid fire and a charge shot. Sky Kid is notable if only as one of the few shooters which scrolls from right to left – you control a biplane which can shoot down enemies or loop-de-loop to escape, not to mention that you can button mash to attempt to save yourself after taking a hit. Each stage also gives you a single bomb to pick up, which you can drop onto a specific target for bonus points – don't forget to nail the landing at the end, though. It's unusual, but actually pretty fun.

A few of the games included on certain volumes vary slightly depending on which regional release you pick up, but all the shooters are consistent, so you don't need to worry about those. Otherwise, the titular "Museum" feature includes a hunk of perusable memorabilia for each game, though some of the images and such come with heavy load times – thankfully, though, the games themselves play pretty much exactly as you remember them, and include screen orientation options and most everything else you'll need. If you don't mind the somewhat dated technology on display, not to mention the amount of discs you'll likely need to track down, this might not be a bad museum to spend some time in.

Another once-popular developer with a cult following, Nichibutsu (aka Nihon Bussan) only offered PS1 owners a single (and very old) shooter, Moon Cresta, though it did so twice over – first, it was included as part of Nichibutsu Arcade Classics along with Crazy Climber and Frisky Tom, and later on it was given a stand-alone release on Hamster’s “Arcade Hits” label. The game itself is a rather simple variation of single-screen standards a la Space Invaders and Galaxian, with a single noteworthy “hook” that was expanded in its sequels – your three “lives” are actually three adjoining parts of a single battleship, and if you survive long enough playing as the first, you’ll be given a chance to “dock” with the second piece and raise your firepower, and the same goes for the third. However, doing this also makes you a bigger target for enemies, and is equal parts rewarding and frustrating. Compared to the many other “classic” shooters available on the system this one doesn’t hold up particularly well, especially considering how few trimmings it gets – neither version is lacking much of anything if you’re looking for arcade perfection, but if you’ve never played this one before, definitely try before you buy.

Toaplan Shooting Battle 1

While for many players Toaplan’s later work and art style (a la Truxton or Batsugun) ended up as unofficial representatives of the company’s shooter output as a whole, longtime fans can clearly recall their earlier titles, including the two-and-a-half helicopter-themed shmups compiled here, namely Tiger Heli, its sequel Kyukyoku Tiger (aka “Ultimate Tiger”) and its semi-alternate version, Twin Cobra. Each of these games are reproduced in arcade-perfect fashion on this disc, though there aren’t a whole lot of extras to be found – also worth noting is the fact that the game refuses to play correctly on pretty much any setup except for a genuine Japanese PS1 – even on a J-PS2 or similar “legit” setup you’ll likely run into problems. The game’s not a very easy one to find either, so before you set off in pursuit of it you might as well know what you’re out to encounter.

Tiger Heli was the second scrolling shooter produced by the company, after Slap Fight (aka Alcon) – as you’d expect it’s pretty simple, giving you a single (limited-range) weapon, a supply of bombs, and two types of collectible (and destructible) options. Other than a few semi-hidden “bonus” targets there’s not much aside from survival to concern yourself with – of course, survival is plenty by itself, and your chopper’s slow speed doesn’t help matters. Enemies coming from behind, in particular, are a menace simply because you can’t get below them faster than their bullets can reach you – adversaries who start clogging the screen with shots as soon as they enter the screen are no fun either, thanks to the limited range of your guns. Kyukyoku Tiger tightens things up some, offering more enemy and weapon variety, instant respawn upon death, and a presentational upgrade. One curious design decision was making the bomb slower to activate than in Tiger Heli – ack! Its regional variation, Twin Cobra, is the same except for the

inclusion of simultaneous 2-player and a remixed soundtrack. While this era has passed some shooting fans by, there are still plenty who hold it in high regard, and these are the best ports of this trio that you're likely to find.

Wonder 3

Capcom's three-game set appears on the PS1 in much the same form as it did on the Saturn, and again under the "Arcade Gears" label. Alongside "Roosters" (aka "Midnight Wanderers," a platformer) and "Don't Pull" (a block puzzler) you've got "Chariot," a side-scrolling shooter, set in the same fantasy world as Roosters and starring the same two elfish characters, this time equipped with some flying gear. Most elements are fairly by-the-book – you can collect and equip either wide or narrow shots, as well as a ground bomb; you'll also want to amass a stock of tail options, which can block attacks or fuel power shots, but need time to regenerate afterwards; there are score-item coins which increase in value if collected carefully.

Along with the eye-catching setting each of these elements works fine, but as you'd expect from a shooter that exists only as part of a compilation, the execution of some of the genre basics (most notably minimizing unfair deaths) is a bit on the shaky side. As with the Saturn port, I might first recommend trying this (legally) on Capcom Classics Collection 2 on the PS2 – if you like it enough to spring for a slightly more "arcade-perfect" experience, then you might want to start searching for one of the 32-bit incarnations, but expect to stay on the lookout for a while.

Xevious 3D/G+

A trend-setting title in myriad ways, Namco's Xevious is all but unanimously considered a genre classic among shooter players. This compilation not only features the original game and two of its variations, but a completely 3D remake. The first game is simplicity incarnate – you shoot airborne enemies and bomb ground-bound ones (via a set-position cross-hairs, a particular innovation). No power-ups, just a handful of hidden bombing targets – otherwise, just try not to die. The graphics and music are very simple and repetitive by today's standards, though they set some new benchmarks during their era – otherwise, just make sure you're prepared for a challenge, as the game's rank will come down hard on you if you aren't prepared for it. Super Xevious plays pretty much identically to the original, but ups the difficulty even more, including new enemies and patterns, as well as vehicles that you can "rescue" for bonus points.

Xevious Arrangement, originally part of a three-game arcade board (Namco Classic Collection 1) which also included original and "arranged" versions of Galaga and Mappy, is, again, not too far removed from the first game, but boasts

a nice set of enhancements. The backgrounds have been upgraded, though most of the sprites are the same, and the soundtrack has been given a welcome overhaul as well – additionally, your shot and bomb fire rates have been increased, a (scarce) power-up for your gun can be found, a handful of set pieces were rearranged, and finally simultaneous 2P and some extra-challenging end areas have been attached. 3D/G, as you'd guess, is a new game entirely, done with (rather plain-looking) 3D graphics and a slightly tilted perspective – more importantly, though, you now have 3 collectible weapons to choose from and standard autofire to put off the onset of carpal tunnel syndrome. Overall, this package has something for just about everyone, and can be found relatively easily in all three regions, so unless Xevious is really not your thing you probably ought to hunt this collection down.

Gatchaman: The Shooting

Just in case the pair of Bokan games wasn't enough to satisfy your old-school anime shooter cravings, here's one more vert-scroller with a Tatsunoko licence to whet your whistle – be aware, though, that when you see the “Simple 2000” label on the cover, you'd best take it seriously. Four of the five main heroes (everyone except Ryu) has a pair of stages to tackle, one on foot and one in a vehicle, which can be completed in any order – after that, one more section and the game is over.

The structure is about as textbook as they come – you can shoot, bomb, and power yourself up, but not much else – before you even ask, forget about any sort of scoring system. The game is also very easy on default settings, which gives you a refillable life meter – you can switch on “sudden death” in the options menu to threaten yourself with a one-hit Game Over, but the game itself doesn't get any harder, just less forgiving. On the plus side the graphics are rather nice (though they, along with the music, get a bit repetitive) and there's a modest gallery to unlock, not to mention the cheap price tag – still, there's no reason to expend a whole lot of effort tracking this one down unless you're a fan of the anime.

Night Raid

This is perhaps Takumi's least-known shooter, having managed only a brief arcade appearance and a late port to the PS1, neither of which left Japan. Looking past the borderline-abstract graphics and hard-rock soundtrack (complete with a handful of bizarre “shouting voice” sound effects), it plays relatively similarly to many of the company's other games – you've got lots of bullets, a small hitbox, “ceremonial”

powerups, the ability to fly over enemies without damage, a temporary invincibility mechanic (plus a regular ol' bomb), and loads of digits on the score counter. Once you're into the nitty-gritty, however, you'll find that you've got a different sort of beast on your hands.

First off, the aforementioned invincibility mechanic – in similar fashion to the shield in Giga Wing or Mars Matrix you can activate the “Hug Launcher” (a “ghostly” version of your ship that fires in front of you) to give yourself a momentary respite, and as usual it needs a few moments to recharge afterwards. You can forget about absorbing or reflecting bullets, though – not only do you not need to hold the launcher button down (instant activation is nice), but to use the launcher effectively you've got to not only target an enemy with it, but “bounce” it between any and all baddies on the screen to make it last longer (and activate a point bonus or two while you're at it). While supposedly there's a method to this, most of the time you'll have just as much success mash-wagging the directional buttons at random. Then there's the scoring system, which appears at a glance to be a simple “collect stuff bad guys drop” setup. You'll notice some funky goings-on if you observe the “thermometer” at the left side of the screen, however – as you collect the aforementioned score items it rises, and you gain more points for destroying enemies. Any items you miss that fall off the screen, though, will lower the meter in equal measure, and can even send it into negative territory, causing you to LOSE points when you kill something. The game, thankfully, accommodates, offering three different score tables, “positive,” “negative,” and even a “neutral” one, giving the highest spot to the score closest to zero – unfortunately, there are so many point items onscreen at a given time, along with all the bullets, that collecting or avoiding them is too frequently an exercise in utter chaos.

And then there's the matter of the port itself – for one thing, the two-player simultaneous option from the arcade version is gone, so you'd best plan on flying solo. Moreover, the controls, quite simply, feel a bit slippery, at least when played on a modded US console or Japanese PS2 – movement just isn't precise enough to allow you to squeeze into the necessary safe spots consistently. Some attest that playing the game on a genuine Japanese PS1 alleviates this problem, but either way it's an all but game-breaking problem for everyone else. If not for this issue in particular I wouldn't mind recommending Night Raid as a “curiosity” pickup for the adventurous, since it's certainly unique, and not expensive to acquire either – as things stand, though, buyer beware.

X2: No Relief

Players familiar with the Amiga scene, or perhaps fans of the Worms series, are probably most likely to recognize developer Team 17 and know of its old-time computer shooter Project X – well, lo and behold, nearly half a decade after the original a sequel appears on the Playstation. Published by Capcom, originally released in Europe and eventually brought to Japan, US gamers, as usual, never got a shot at this one – that said, all things considered, they weren't missing out on a heck of a lot. While the graphics (a mixture of renderings and hand-drawn stuff) hold up pretty well, and you've got three selectable ships to cater to your play style, the underlying structure hangs on tight to many “Euroshmup” characteristics that have made this unofficial sub-genre something of a pariah within the shooter community.

Principally a side-scroller, though it will occasionally shift to an overhead vertical perspective, there's no real scoring system to speak of, though the game tries to make up for it with excessive weaponry. There are LOADS of weapons to collect here (not counting smart bombs), and you can have several of them firing at once – while causing mass destruction is fun in and of itself, not only does this reduce the challenge level (a refillable energy meter is an

additional culprit on that front), but makes spotting enemies and their shots a pain in the neck (especially by the end, when your tooled-up arsenal will all but completely block out a good portion of the screen). Add uninspired enemy formations and attack patterns to the mix (even the final boss plays like a broken record) and I'm hard-pressed to recommend this to anyone except those who greatly enjoyed the Amiga shooter scene back in that day – the rest of us are likely to have moved on. If you must have this game the later Japanese release is slightly better-balanced than the PAL version, but it's also pricier and more elusive.

Soukyu-gurentai Oubushutsugeki

The hyphen and extra gibberish at the end aren't the only things that were added to the PS1 port of Soukyugurentai, one of the premier Saturn shooter ports – alongside the original arcade game is an Extra mode, featuring new cutscenes, voice chatter during stages, and an additional (and overpowered) selectable ship. Unfortunately, along with the new stuff comes a slight downgrade to both the graphics and the sound, and more importantly, extra slowdown. In summary, locking onto bunches of enemies and blasting them to kingdom come is still very much present, and still fun, but this is definitely not the optimal way to experience it.

In its favor, the game, as on the Saturn, was reprinted and is not very expensive to acquire, so if the PS1 is your only option this is worth picking up – otherwise, even without the system-exclusive song and dance, spring for the Saturn port instead.

Philosoma

One of the Playstation's earliest titles, it won wide acclaim at the time of its release, mostly due to its impressive CG scenes and in-depth story, two gaming elements which rarely show their faces within the shooter genre, and were scarce overall back in the day (in hindsight, of course, a gamer could use the existence of a cinema- and story-heavy shmup to bewail the decline of How Things Used to Be, but I digress). The game saw release in all three regions and is easy to track down even today – the question you're asking, of course, is how well it's held up over the years, and whether its unusual feature set, which has by and large not been copied by other shooters, can still impress in this day and age.

If you strip away the gloss, the game employs a pretty standard setup – you can switch at will between four weapons (which are powered up individually), collect two missile types, drop a bomb if you're in trouble, and keep an eye out for health meter refills after the fact. You'll note that I've yet to mention the perspective you play from – another

key facet of *Philosoma*'s eye-catching quality back in the day was its constant shifting of the player's viewpoint, from side-scrolling to overhead to behind-the-ship to angled. Pretty much, if you name it, you'll probably see a section or two of it in here. It's neat in its own way, but unfortunately hobbled on a basic level – no matter what perspective you play from, dodging certain enemy attacks is nearly impossible (as is often the case in health-meter shooters), making success largely a matter of conserving enough shielding from other sections to get through the unfair ones. Having your current weapon downsized to square one upon death doesn't make things any easier. All told, *Philosoma* is best picked up as a curiosity – or, perhaps, to see one of the few storylines in a shooter worth more than a passing mention.

Strikers 1945

What goes around comes around, I suppose...while the Playstation received the superior port of *Strikers II* (see above), its version of the original is mired by excessive slowdown, much like *II* is on the Saturn. Especially considering how many shooters ended up receiving nearly identical ports to the two systems, I can't imagine why the home releases of these two games turned out the way they did, unless Atlus/Psikyo had the most schizophrenic porting team the world has ever known working on them. In any event, while this port is far from unplayable, get the Saturn equivalent if you can, since there isn't much else to distinguish them.

Space Shot and Sanvein

Near the end of the Playstation's life, smatterings of budget-priced titles began to emerge from the shadows, circling like buzzards over the system's gray plastic carcass – these two shooters found themselves among that crowd, the former a side-scroller from C.I.I. and the latter an arena shooter from Success. Both were brought to the US and *Sanvein* also made it to Europe, so neither is much of a struggle to acquire – when they were released, either of them was likely worth the paltry entrance fee for famished shmuppers, but what about today? *Sanvein*, for its part, is an overhead title somewhat in the vein of *Smash TV*, giving you a choice of three “main” and “special” weapons and tasking you with the mission of clearing out all of the “boss rooms” in each level via a *Darius*-esque branching arena setup.

What makes things interesting are 1) the fact that there are no “lives” here, just a time limit, which is decreased if you die, and 2) the absence of any traditional powerups – to give yourself more destructive ability you need to clear

out some of the “non-boss” rooms before going for the big guy, so you’ll need to budget your time wisely. It’s a simple setup, but its semi-abstract presentation isn’t bad, and most any conveniences (selectable stage paths, visible enemy life meters) that you might ask for are present, so if you see this one at its expected cheap price it might turn out to be a nice surprise, if its style agrees with you.

Space Shot is something of a composite side-scroller, seemingly cobbled together using spare parts from other shooters – you’ve got a standard pair of gun options that can be moved around your ship or locked in place, a Soukyugurentai-esque lock-on “net,” a Thunder Force V-style “over weapon”, and even a dash maneuver a la Steam Hearts, of all things. A few elements have been tweaked to make them a bit more interesting – most notably, you can use the fiery burst left in your wake after a dash (which lowers your “over meter”) to damage enemies. Doing so repeatedly earns you a point bonus, as does dash-dodging bullets in succession – thankfully, after giving you all this stuff to use, the game includes a Training mode with a handful of exercises to help practice some of the required techniques. Unlike Sanvein, though, the graphics (both in-game and cutscenes) were unimpressive then and look worse now, and the various amenities, though they can be ignored to some extent, tend to get in the way more than they should. It’s hardly the worst shooter you’ll encounter, certainly, but make sure you’ve acquired some of the better stuff for the system first.

Darius Gaiden

The Darius series’ penultimate game takes up residence on the Playstation as well as the Saturn, and is pretty much the same, aside from a different opening cinema. Of course, while this means that the game’s good points (branching stages, nice graphics and music, the ability to “capture” midbosses) are all present and accounted for, the same goes for the bad (a very unforgiving rank system, some near-unavoidable patterns, difficult recovery after death). For fans of the series this is definitely a worthy play, especially considering the smattering of improvements that have been made over previous entries, though others might find its overall structure a bit too Draconian – one caveat, though, is that the PS1 version is far rarer than its Saturn counterpart (or the PC port), and much more expensive as a result. This edition, as a result, is likely only worth seeking out for collectors, as it’s far more accessible elsewhere.

Sonic Wings Special

There’s no collectible mini-CD this time (I’m sure that the legions of Mao

Mao fans out there are inconsolable), but in terms of most everything that actually, well, matters, the PS1's iteration of this "composite" Sonic Wings title is (stop me if you've heard this before) all but identical to the Saturn version – some fans give it a slight edge due to its clearer music and sound effects. You've got all the characters (geriatrics, dolphins, ninjas, pop stars, etc.), all the aircraft, all the levels, the same simple item-based scoring mechanic and pretty much the same performance all around. That said, this game definitely doesn't do much to refute the over-applied label of "generic" that its genre is often saddled with, so don't expect very much that you haven't seen before when you pop in this disc, especially if you're familiar with Psikyo's output.

That said, there are plenty of levels to see and pilots to take for a spin, so anyone who doesn't mind one more go at a plain' ol fighter jet shmup shouldn't mind the window dressing (or lack thereof) too much, and the relatively cheap price and ready availability work in its favor as well. A warning to European gamers, however – while this title received a late trip into PAL territory in 2004, with the vertical screen option and boss rush mode intact, this version does not allow you to save any data. Aside from the annoyance of having to scratch down your high scores on a scrap of paper, this also means that you won't be able to keep any unlocked ships – unless the de facto smaller lineup doesn't bother you, you'll likely want to hunker down and go for the import instead.

Sol Divide

Due to either the Saturn's relative lack of success outside of Japan, or because PS1 owners were somehow expected to react more positively to the notion of shooting bearded wizards out of the sky, Psikyo's fantasy-themed side-scroller was sent to the US on Sony's system but not Sega's. As with most Western shmup releases it was given a budget price and is not overly hard to find, but the core gameplay can quickly become frustrating thanks to your chunky onscreen avatar and its relatively weak distance-attacking abilities. The fantasy setting and smattering of RPG elements are a nice change of pace from the genre's usual offerings, but the digitized graphics and frequently overwhelming enemy attacks, coupled with an especially short duration, will make this a hard sell for many – also, the Western version, aside from missing some translated story segments, lacks any sort of save feature, which is not only an inconvenience for keeping track of high scores but renders the lengthier "Original Mode" all but completely unplayable. Still, there is a small group of fans who consider this game underrated, so if you've got a few extra bucks to burn and don't mind taking a bit of a risk, this title might end up pulling you in – still, you'd best keep the complaints about it in mind as you make that decision.

Dezaemon Plus and Kids

Sony's system, as it turns out, got not one, but two entries in Athena's long-running create-a-shooter series – the basic idea and setup are more or less the same for both, but as the titles suggest the latter has a simpler layout and shallower options, and was marketed mainly toward younger budding shmup builders. Each title also has some sample games on it – well, actually, only Plus has “some” (including another Daioh tribute) – Kids, believe it or not, boasts a whopping 101 playable user-created shooters, accessible via the “Select 100” menu. While each of these games, understandably, plays pretty similarly, it's still cool to see all of the different coats of paint that the participants came up with to spice up the same simple core engine, from ninjas to cyborgs to things I have yet to identify. As a bonus, included with each submitted game is a “comment” selection, which allows you to view the illustrations and notes that each game's creator included with his entry – for some, this feature alone will make Dezaemon Kids a worthy purchase. Otherwise, either of these titles require creativity, experimentation (doubly so if you don't know the language), and a lot of memory space to take full advantage of. Find Dezaemon Series on eBay

Jaleco Collection Vol. 1

Ever wonder where the characters and ships from Jaleco's parody shooter series Game Tengoku (the second of which is covered earlier on in this article) originally came from? Well, the four mid-80's shmups included in this seven-game collection will answer your inquiries into a few of their origins. Argus, a vert-scroller, is a relatively cut-and-dry Xevious imitator, in which you use both “normal” shots and ground bombs to dispatch enemies on both levels, though a handful of powerups and wide-layout levels set it apart a little. Exerion (Jeynus's original game), while intended to simulate a “3-D” shooter, is really a single-screen top-down shmup when you get right down to it, giving you a slow-firing twin blaster and a limited-use machine gun to fight off your enemies. Formation Z (Z-Dyne's debut) is an interesting hybrid – most of the time you'll be running automatically forward on the ground, aiming your gun and occasionally jumping to avoid threats, but for a limited time you can transform into a jet and take to the air, and progress more rapidly. Finally, Field Combat (home turf of Miki, apparently – not sure about Misato) puts you in command of a UFO-like tank, which can't shoot, but can bomb, Xevious style, as well as capture enemy troops and turn them over to your side, to be deployed at your leisure – careful not to get slowed up by the terrain, though. While the ports are fine for what they are, be advised – they're of the Famicom/NES versions of these games (with some minor graphical improvements), not the original arcade releases. Oh, and in case you were curious, there never was a “Volume 2.”

Space Invaders Variations

Taito's forever-repackaged classic got no less than four incarnations on the PS1, though three of them were Japanese exclusives – and each of those was a slightly enhanced reprint of the same game. The earliest release (titled simply Space Invaders) is the same version as was released on the Saturn, featuring the original game along with new Versus and Time Attack modes. A year later, in 1997 (the series' 20th anniversary), the inaccurately-titled Space Invaders 2000 hit the shelves – it's the same package as its predecessor, except with a lower price tag, Dual Shock support, and demos of side-scroller G Darius (featured elsewhere in this article) and train simulator Densha de Go 2. Finally, in 2001, an even cheaper "Simple 1500" remake known as The Invaders completed the trifecta – the demos from 2000 are gone, but a new "3D Mode" is included, in which you can switch between the original viewpoint and a "3D" version, featuring a behind-the-player camera angle. Some of the extra features included on this trio might interest fans of the original game, but for the rest of us they'll simply look like an excuse to re-market a decades-old game ad nauseam, "classic" or not.

In 1999 Space Invaders X, the only entry to get to the US (once again confusingly retitled "Space Invaders" after being relocated), made an appearance – the 3D graphical once-over, while not bad for the time, lacks some personality, but the gameplay has made several notable advances, some of which were carried over into the recent (and excellent) Space Invaders Extreme. There are fewer barriers to block your shots (yes, you're actually trusted to dodge enemy bullets all by yourself), as well as more enemy varieties (including bosses), special weapons, scoring tactics and a "time attack" element – in short, this is one of the few Invaders releases that truly feels like a step forward rather than a rehash. Also, in case you haven't played it enough yet, you can unlock the original game, dubbed "Classic Mode" here, but the enhancements present in the main game will almost certainly be the main draw for a majority of players – and rightly so.

As a final note, if you're a dyed-in-the-wool Invaders nut, you might be interested in the highly obscure Tsuntsun-kumi 3: Kanjivader – this one wasn't made by Taito, but was put on the market by mega-publisher Kodansha as a teaching tool to help kids learn their kanji. The shooting, obviously, is more or less an afterthought in this product, though its legions of octopods with big pouty lips might be good for a few laughs – otherwise, though, you're advised to steer clear.

Atari/Midway Collections

The long-time game-makers ended up putting out a total of five different collections of their old-school arcade releases for the PS1 – Arcade's Greatest Hits – Atari Collection 1 and Williams

Arcade's Greatest Hits were released in the US in 1996, Atari Collection 2 and Midway Collection 2 in '97, and Atari Anniversary Edition Redux in 2001 (all four games were released a year later in PAL format). The ports on each collection are of good quality, and most of them also feature a nice selection of extras, including developer interviews – each one, of course, also has a shooter or two thrown in there, so which one of these to get (assuming you're a fan of games this old to begin with) pretty much depends on which selection you like best. Here's an overview to get you started –

The first two Atari titles feature a total of six games apiece – Collection 1 has Asteroids and Centipede on offer for shooter fans, plus Battlezone, Missile Command and Tempest on the “borderliner” front. Asteroids uses an overhead perspective and allows movement in any direction, but unlike the later Time Pilot doesn't move the ship forward automatically, requiring “thrust” from the player. Both you and the titular asteroid obstacles (plus the occasional flying saucer) will reappear on the opposite side of the screen if moved over the edge, so use this to your advantage. Centipede is a simple single-screen offering most comparable to Gaplus, since you can move freely within a limited space – of course, you'll want to do your best to keep the ever-descending centipede out of your territory, along with several other nasty bug types and hard-to-destroy mushroom obstacles. The only shooter on Atari Collection 2 is Millipede (though Gauntlet, Road Blasters, and possibly Paperboy have some shooting semi-characteristics), which plays almost identically to Centipede but adds in exploding DDT canisters which you can shoot and, if you time it right, do some major damage to the bugs with.

Redux, the most expansive of the bunch, packs in a dozen games total (though not all are new), half of which are shooters (including Asteroids and Centipede in a second appearance) and an additional quarter of which (Battlezone, Missile Command, Tempest) are borderliners. New offerings include two Asteroids offshoots, Asteroids Deluxe (which is nearly the same as the original, except that “hyperspace” has been replaced with a shield and a few other minor changes) and Space Duel (which gives you the option to play as two tethered ships, or cooperate or compete with a second player), as well as the Robotron-esque Black Widow, which casts you as a spider blasting bugs which wander onto your web. The most unique game on here is Gravitar – after choosing a planet to conquer you orbit around it, picking off gunpods and snapping up fuel, but you're constantly being pulled in by the planet's gravity and must compensate for it. The Williams set, for its part, includes side-scrolling pioneer Defender and its sequel, Stargate (they're tough enough as it is, but the surprisingly high number of buttons used are enough to make some players cry “uncle”), alongside twin-joystick arena classic Robotron 2084 (which still outperforms its sequel, reviewed elsewhere) and Asteroids evolution (and one of video gaming's most famous voices) Sinistar. Midway Collection 2 has Splat! (a single-screen “food fight simulator” where you need to collect foodstuffs before lobbing them at enemies) and Moon Patrol (a side-scrolling “drive-em-up” where you jump over potholes and mines, blast rocks in front of you and shoot down enemies above you). Borderliners on tap include Spy Hunter and Blaster.

Activision Classics and Intellivision Classics

The full titles of these compilations, both developed by ATI and released a year apart, are the annoyingly long “A Collection of Activision Classic Games for the Atari 2600” and “A Collection of Intellivision Classic Games”. Formalities out of the way, each package has a selection of around ten (depending on how picky you are in your definition) “proto-shmups” from days gone by included in their total selections of 30

titles apiece – generally speaking, the Activision set is regarded as having a better lineup, but also being a poorer conversion, a rather inexcusable flaw for games this old. The Intellivision collection, for its part, has an opposing set of advantages and problems. Either way, you'd best have a healthy (or possibly unhealthy) love of all things retro to get the most out of either of these sets.

On both collections, several of the included shooters are obviously intended to mimic their successful arcade predecessors – the Activision compilation's Chopper Command is the most blatant Defender clone, though its companion, Cosmic Commuter, adds some interesting elements, such as picking up and dropping off customers and snagging fuel pods. Plaque Attack is a quirky Space Invaders knockoff, pitting a tube of toothpaste against small groups of evil food particles, defending a set of pearly whites – every other stage you'll switch from the lower to the upper jaw, and actually shoot downwards, which is unusual if not particularly exciting. MegaMania is similar, except that this time you've got a depleting “energy meter” time limit, and have the option to guide your shots. Spider Fighter is a less-crowded Centipede, with a fast pace and fruit to protect, while SeaQuest is a single-screen side-view submarine shooter, where you blast the fish and collect the divers, as well as periodically rise to the surface for air. River Raid, an honest-to-goodness vertscroller, is (understandably) textbook save for the fuel pods you must fly over regularly, though you can shoot them too – River Raid 2 adds in speed and altitude controls, as well as a ground bomb. The most unique of the bunch is Laser Blast, where you control a floating probe and vaporize tanks below, if they don't do the same to you first – aside from the ability to aim your laser, the coolest part is steering your spiraling vessel into an enemy to exact revenge after being shot down. If you're interested in borderliners you could try Missile Command knockoff Atlantis, crosshairs shooter Star Master, or trade your gun in for a lasso in Stampede.

Moving on to the Intellivision bunch, Armor Battle is a “tank” game similar to Combat, though the solid walls have been replaced with terrain that will slow you down, and you can now switch control between two tanks, as well as lay mines. Space Armada is an unapologetic copy of Space Invaders, exchanging a smaller screen area for better-animated aliens, though the game becomes unfair even more quickly than the original. Astrosmash takes the aforementioned Invaders and mixes it with Asteroids – stuff falls at you, and can be shot and split apart, though you lose points for anything that manages to hit the ground. Speaking of Asteroids, Space Hawk plays similarly to that, except that you're a jetpack pilot with a short-range flamethrower, and you're up against aliens instead of hunks of rock. Then there's Sharp Shot, a set of 4 shooting-styled “mini-games,” which range from a maze shooter to a football passing game. Other possible semi-shooter choices are strategy hybrids Space Battle and Sea Battle, periscope sim Sub Hunt, heli-bomber Hover Force, trench blaster Star Strike, and perhaps even the “tongue-em-up” Frog Bog – you can also get a gun powerup in the Pac-Man-esque Night Stalker.

Galaga: Destination Earth

Even those who aren't into shooters have probably heard of Galaga – next to Space Invaders it's possibly the best known “proto-shmup” ever released. The original was ported to myriad systems and is still receiving remakes (most recently Galaga Legions on XBLA) down to this day, but this PS1 oddity, only released in the US and Europe, departs from the original formula to a greater extent than most. While the graphics are 3D (and not too bad-looking overall), the gameplay stays squarely in two dimensions – however, in similar fashion to Philosoma, it doesn't keep you viewing the action from the same perspective for long.

In certain spots you'll utilize the usual top-down viewpoint, but in others you'll experience some side-scrolling shenanigans, and elsewhere even switch to a Star Fox-esque behind-the-ship camera. This gimmick by itself is likely enough to drive away many genre fans, though you do still come across the occasional ability to turn the aliens' own tractor beam against them a la Gaplus, and have the buggers help you out for awhile. There was also a Windows port and a (not recommended) Game Boy Color knock-off if anyone is interested in playing it elsewhere.

Asteroids and Centipede

In case you hadn't already heard enough in this article regarding proto-shmups, here are two more that are still pretty fresh in gamers' minds after several decades – of course, as stand-alone PS1 releases, you weren't expecting just straight ports of the arcade originals, right (granted, the aforementioned classics are in there, in both cases, though neither is emulated very well)? Nope, both have been given the 3-D once-over, with varying results – let's start with Asteroids, which, despite the graphical face-lift, plays almost exactly as you remember it. Thrusting, shooting, and an overhead perspective are still the name of the game, though some new bells and whistles are present, most notably a handful of temporary weapon powerups (mines, scattershots) and some new enemies (regenerating asteroids) and obstacles (black holes). You've also got both the "hyperspace" and "shield" features with which to defend yourself, as well as a selection of ships with (slightly) varying parameters and a two-player cooperative mode to mess around with. While this remake doesn't stray too far from its decades-old roots, it's actually the more successful remake of the two as a result, and a pretty easy-to-find (it received a "Greatest Hits" reissue in the US and a "Superlite" release in Japan) addition to the collection of anyone who enjoyed the original.

Onward, with some trepidation, to Centipede, whose main selling point is the new "Adventure" mode – not only have the graphics been inflated into 3D and a traditional level structure been implemented, but you've also got a handful of powerups, the ability to jump, and most notably the freedom to wander through a level at will, turning and shooting in any direction. While this sounds interesting on paper, many of these "enhancements" do more to hobble the experience than help it – you can switch between the traditional top-down view and a behind-the-ship camera, but the former makes the graphics look particularly awful (the cutscenes, before you ask, are similarly low-quality), while the latter opens you up to cheap deaths from behind. The tacked-on platforming elements are also roughly-implemented and frustrating, and the generic techno soundtrack really doesn't suit the setting. Even those with fond memories of the arcade original from way back when are probably best served by leaving this one well enough alone.

In borderliner territory there was also a PS1 remake of Missile Command – in similar fashion to Centipede it offers you the option of "Original" (basically the same as the arcade game but with upgraded graphics) or "Adventure" mode, which exchanges the gunpods of old for a trio of spaceships (viewed from a behind-the-craft perspective) as well as the ability to purchase special weapons and the like (not to mention the requisite handful of CG scenes). The 3-D window dressing takes a little getting used to, but overall it plays pretty similarly to the "regular" version – point the crosshairs, time the explosions. It hardly replaces its inspiration, but one could definitely do worse. Then there's the polygonal Robotron retread, Robotron X – the larger arenas give you more space to move around, but also don't allow you to see the entire area at once (whether in "overhead" or "3D" viewing mode), and there's no dual-analog control option to replicate the twin-joystick schematic of the arcades. The expected extra weapons and whatnot also

make an appearance, but the fact remains that the game simply isn't as fun as the original – if you absolutely must play Robotron in 3D, go for the improved Nintendo 64 version instead.

Cotton Original and Cotton 100 %

For my money Cotton's most noteworthy adventures are to be found on the Saturn (though I'm sure that there are fans of Panorama Cotton on the Genesis who'd beg to differ), but unless you're up for tracking down PCE or SFC carts these PS1 titles are a recommended alternative way to see where it all began for the hungry li'l witch and her ever-abused fairy companion. As was already mentioned, however, her best years were definitely yet to come.

Original, as you might guess, is a port of the first Cotton, which first saw daylight in the arcades – the reproduction is perfect (if bare-bones), but the game itself is mostly unremarkable. You've got a shot button and a bomb button (just a "regular" ground bomb mind you, not a screen-filling nuke), fairy options, and a limited stock of chargeable magic spells. The most interesting distractions on offer are the Twinbee-esque ability to shoot powerup crystals to change their properties, and the capability to charge up not only your magic shots but your fairy helpers, via the bomb button, to attack directly – in a tight spot you can even let loose both at once for a super ability. Otherwise, however, most of your deaths will be "where did that come from?" affairs, and the dark, dingy graphics seem startlingly at odds with the light, silly story. While the game originally received a full-price release, it was reprinted twice under the "Simple 1500" label, once by itself and a second time packaged with the puzzler Block Keeper.

Cotton 100 %, on the other hand, was originally a Super Famicom exclusive, and also when the series began to embrace the "cute" atmosphere that it largely (and curiously) resisted at first. The colors and atmosphere are brighter, but as before you'll frequently find yourself struggling to see bullets and enemies, especially when an opaque foreground element blocks your view completely. Some other features, however, have definitely improved – for one thing, you can now select from four "configurations" at the start, a la Gradius II. Each of these gives you three magic shots and three option formations which can be switched between at will, giving the player a bit more variety and freedom than before. Also, your magic is activated by a separate button, so you don't have to wait for it to charge if you're in a trouble. Unlike Original, this one was only released on the "Superlite" label, though it's similarly lacking in extras...including a high score save.

Stahlfeder and Air Grave

Santos is yet another developer that you're likely never to have heard of, largely because they only made three games within a brief two-year span – this article, meager as it is, covers two-thirds of their total product output. Both of these vertical shooters were released within a year of each other, with Stahlfeder (“steel feather”) being the first – after selecting one of four similarly German-titled aircraft, which not only have different speeds and weapons but varying amounts of lives, you're off to blast all manner of tanks, cranes and so on. Each plane has two weapons, a “wide” and a “laser” type, each assigned to its own button and requiring separate items to power up, as well as a generous supply of bombs – otherwise there's not much to it, least of all any semblance of a scoring system beyond “kill things.” The game is quite easy, thanks to its plentiful shield refills, but the mixed sprite/poly graphics haven't aged as badly as some of its contemporaries, and the inclusion of the option to alter the color of enemy shots is something I wish more titles offered.

AirGrave adds a few more trimmings to the basic shooter formula of its predecessor – there are now mission briefings and story segments between stages, as well as voice acting during both the cutscenes and actual gameplay, plus the addition of some set-value point medals for scoring purposes. The biggest change is the introduction of separate ground and above-ground planes – while a single button fires both your air- and land-based weapons, you've got to aim them separately to hit targets on each level. You also have a lock-on, which can target several earthbound enemies at once in a limited area – as you'd expect, more targets equal more points, so you've got at least a bit of score attacking to be done. Neither of these games is particularly awful, but neither is anything to write home about either – more or less the definition of “mediocre.” They're far from the worst things you'll ever play, but don't spend time looking for them unless you've already exhausted most of the rest of the system's library, especially seeing as both make rather infrequent appearances on the market.

Two-Tenkaku

Although this game was created by a completely different developer (a four-man team known as “Club DEP,” who apparently worked under Sony's “Music Entertainment Japan” label, and are all but impossible to find a trace of nowadays), those who have played one or more of the aforementioned Santos obscurities are likely to be reminded of them by this game, thanks to both its slightly outdated sprite work (which is quite inoffensive compared to the laughable 3D cutscenes) and overall mediocrity in the gameplay department. You've got three ships to select from, and while each has a unique “main” weapon, all three can collect the same

two types of missiles and bombs (a weird screen-filling Buddha blast and a laser with a face) alongside a handful of simple score items.

Aside from the somewhat odd pseudo-Oriental setting (made even weirder by the selection of sound effects) there's not much to set the game apart from the crowd – it's also not very challenging once you've learned the layout of the stages, so it might be worth a try if you're looking for an easy one-credit clear. Collector types (probably the only ones with a truly genuine interest in this) will want to sniff out a copy which still includes a poster.

Meta-Ph-List Gamma X 2297

Now here's a strange bird for you – a two-disc story-heavy PS1 vertical shooter, and a rather rare one on top of that. According to GameFAQs, this is the only game that the developer, ADM, ever produced – so what sort of product are we talking here? Believe it or not, despite the badly-aged graphics, some shooter fans feel compelled to call the game “a poor man’s Radiant Silvergun,” thanks to its scope and ambition, even if said elements aren’t as successfully implemented here. You can switch between three weapons, including a lock-on, which gradually level up as they’re used to down enemies, as well as adjust the firing direction of each – also, not only can you select which stages to play in order from a menu, but you can replay levels (enemies will be the same, but the background will change) if you’d like to further improve your arms before moving on. None of this is as notable as your slowdown-inducing, robot-voice-accompanied bomb, however. While the somewhat weak level layouts (and resulting presence of a life meter) drag it below what it could have been, some of the whacked-out background effects and overall oddball ambience might make this one worth tracking down for connoisseurs of the obscure – connoisseurs ONLY, however.

Gunbird/Mobile Light Force

Oh dear, where to begin...right from the starting gate the Japanese PS1 version of this game is inferior to the Saturn port, simply due to the fact that it lacks a vertical screen viewing mode – in an ideal world, I could stop right there, having told you all you really need to know about this subject. Unfortunately, publisher XS Games was not content merely to bring this less-than-ideal Gunbird iteration Westward – no, it was determined to visit upon we unsuspecting souls one of the most infamous localization “efforts” in gaming history.

Not only have some character’s names been changed, the art gallery been nixed, high score saving been disabled,

and all story segments, including the endings, completely cut out (where you'd normally see some dialogue, there's just an awkward pause), but the game was inexplicably renamed "Mobile Light Force" and graced with a completely unrelated, Charlie's Angels-esque cover image. Even more hilariously, at the same time the company brought over (and butchered almost as badly) Shikigami no Shiro, a completely separate game on the PS2, and had the gall to dub it "Mobile Light Force 2", even re-using the exact same ludicrous box art. While the company has largely atoned for these debacles with its more recent Shikigami localizations, it doesn't make those early efforts any more worth buying, unless you're looking for an exceedingly depressing laugh or two. You've been warned.

Viewpoint

One of the few "isometric" shmups in existence, and almost certainly the one which touts that fact most aggressively in its title, Viewpoint originated on the Neo-Geo arcade system but received several ports over the years, the last of them appearing on the PS1 and released to market only in the US and Europe. Developed by Visual Concepts, the graphics have been upgraded and given a lot more detail, but the music is not as catchy as it was in the arcade version – further, while the original was no slouch in the toughness department (due in no small part to the unusual perspective and infrequent powerups), this iteration not only retains the aforementioned elements but has left behind any sense of "reasonable" challenge, to the point where playing the game is more an exercise in masochism than anything else. As but one example, remember the early trio of gates you had to shoot open to pass? Well, in this version they've been squeezed so close together that if you don't move and fire near-perfectly you're going to die, repeatedly – and that's just in the FIRST level. Pretty much a unanimous thumbs down among shmup fans, even the slowdown-laden Genesis port is considered superior to this one.

Macross: Do You Remember Love?

Well, the cover art has been changed around, but this side-scrolling take on Macross's 15th-Anniversary big-screen appearance is otherwise identical to its Saturn sibling. The anime cutscenes still look great (perhaps even a bit better on the PS1), but the gameplay, unfortunately, is also untouched, featuring a bulky onscreen avatar, short levels, and rather mind-numbing goings-on overall (just charge and release the micro-missiles and 90 percent of the time your troubles are over). As before, this one is worth getting only either for fans or on the cheap – also take note that, as on the Saturn, the game is split up into two discs, which must be switched at the halfway point to continue. If you're using a boot disc or other such method to play the game on a non-native system you might have trouble continuing

past the switch point as a result, so keep that in mind as well.

Cho Aniki

Aside from the different cover images (not like anyone would have much trouble identifying this title in the first place), the 32-bit Cho Aniki entry is pretty much the same here as it is on the Saturn – unfortunately, that means a second helping of cheesy digitized graphics, dull enemy layouts, bosses that take an eternity to die, and huge, hard-to-maneuver characters. Oh, and a whole lotta dudes in bikini briefs. It's definitely as wacky a shooter as you could care to find in terms of its overall ambience (if you could even call it that), but on technical merits it scores poorly on almost every front. As with many PS1 shooters, however, it did get a reprint, so if you want this title come hell or high water it might be easier to track down on Sony's system.

Super Dropzone – Intergalactic Rescue Mission

If the name Archer MacLean means anything to you, then you're likely familiar with the famous programmer's first game, Dropzone, released near the beginning of the home console era. Featuring mechanics similar to Defender, it was well-received and even managed to earn itself a sequel, Super Dropzone, nearly a decade later. Originally appearing on the Super Famicom in Europe, it sends you back to Jupiter's moons with a jetpack and a pea-shooter to take on yet another bunch o' nasty aliens – seeing as they're even meaner (and toting along some boss critters) this time around, though, you're packing some new power-ups yourself, including rotating shields and spread and homing guns. Of course, you've still got your old faithful cloaking device and smart bomb as well.

Fast-forward almost eight years after the game's original release, and PAL territories receive a budget port of Super Dropzone for the PS1 – as you might expect from a release of this nature not much has been changed or enhanced from the 16-bit original, but unfortunately one of the downsides of the switch to CD-based media is present and accounted for, namely load times. Long ones, too. Additionally, some fans of the first Dropzone feel that the control is a bit clunkier than it used to be, though obviously this isn't a "traditional" scrolling shooter to begin with. For the price this isn't the worst pickup you could happen across, but it's certainly not among the system's elite either.

Strike Force Hydra

Supposedly developed by a team of two people, this vertical shooter puts you at the helm of a hovercraft – for the most part it doesn't control much differently than your average jet plane or space fighter, though it can fire both air- and ground-based weapons to deal with different enemy types. Other than that, it has a speed boost and the ability to jump short distances – though the latter feature in particular was seemingly included (along with an energy meter and a generous stock of lives) to make up for your vehicle's bulky size and infrequent power-ups, it's more a testament to the overall poor balance and design of this title than anything else. The screen area is very wide, and as you veer left or right you're likely to be caught off guard by previously-unseen enemies, most of which take several shots to dispatch and move in patterns that are all but impossible for your chunky 'craft to react to effectively. To sum it up, the game also appeared on the GBA, and is more or less identical there – and even on that system it's not considered a quality pick-up.

PD Ultraman Invaders and SD Gundam Over Galaxian

It's documented fact that licensed properties are often among the first to sink their teeth into any new video entertainment medium – unsurprisingly, then, not long after the Playstation debuted in Japan, “Ultraman”, a Japanese superhero series that's been around for decades and still exists today, teamed up with Taito, utilizing the format of the latter's trademark IP Space Invaders for its own game. The standard cannon is replaced with the silver-skinned protagonist, the invaders are weird(er) rampaging monsters, the whole thing is pumped into 3D, squished down and cute-ified, and the camera can be shifted around, but you'll definitely recognize the proceedings within seconds. You do get to select from several Ultra characters (which play pretty much identically) and viewing angles, not to mention that some collectable weapons and a split-screen versus mode are also included, but none of these offsets the indisputable fact that neither the presentation nor the simple and brief gameplay has aged very well – and the latter was old to begin with. Off to the side, believe it or not, the same variations of the original Space Invaders found on the trio of Japan-exclusive “Invaders” releases (plus the versus mode) are included yet AGAIN on here, though there's no tate option for any of them.

About a year later the equally-indomitable “Gundam” anime property decided to jump on the same license-borrowing bandwagon, though it determined to piggyback on Namco's Galaxian instead. Again, the basic gameplay is pretty much the same deal as the arcade original (except for some extra weaponry and an occasional boss), and as in Ultraman you can switch between the “classic” top-down view and a third- or first-person camera if you're feeling adventurous (or goofy). For the fans, there's a bunch of cinema scenes and an extra “G-Changer” mode as well as

another (single-screen this time) two-player offering, but not a heck of a lot for most others, especially considering how short and unchallenging this game (in the same manner as PD Ultraman) is. You've already heard this axiom trumpeted elsewhere, but unfortunately I'll have to put it forth again – these two games are for fans of the original series only.

TRL – The Rail Loaders

While this article has already covered some weird shooters, this one might be the wackiest of the bunch – putting you in control of a bullet train driven by a fairy-type character (along with a partner, who will be controlled by AI if you're playing alone), it certainly gives new meaning to the term "rail shooter." While viewed from above, your train is indeed limited to traveling on pre-set tracks – you can switch which one you're traveling on by hitting switches (and can back up if you miss one), but each level is timed, so you'll want to keep moving. Moreover, while you can fire bubble shots to clear out enemies in your way (or just jump over them, which you'll have to do to avoid certain "power down" items), doing so in rapid succession will both weaken the weapon's power and slow you down, so blasting indiscriminately will hobble your efforts. Success is all about memorization, as knowing which tracks hold the most loot (and fewest dead ends) is what will get you to the level boss before time runs out – speaking of which, during these boss fights you can finally move your train freely, but the battles are usually so mind-numbingly easy that you might as well still be on rails. The sprite graphics are inoffensive, but the slow frame rate and pacing don't help matters. This game might be worth a look for some players just due to its unusual (if not particularly successful) deviations from the genre (to the point where some won't label it a shmup at all), but otherwise most shooter fans can be content to let this one chug on by.

Tukai! Slot Shooting

If you didn't already read the write-up on the Saturn version of this game in the corresponding article then you've almost certainly never heard of this game – pretty much anything you'd need to know about it is already there, as the Playstation port is identical, but if you'd prefer a short summary in lieu of a click or two, here it is. The game is basically a cross between Space Invaders, a Puyo-esque puzzler, and a slot machine – as crabs of various hues fall from above, you move around and try to shoot three in a row of the same color to start the slots at the top spinning. Eventually, it will award you with a bonus item, which will rotate between several colors – shoot it, and every matching crab on the screen will disappear. It's an unusual concept, but movement is on the clunky side and luck tends to play more of a role than it should in how things end up (though I suppose that should go without saying in any title with "slot" in the title). Basically, unless you're obsessed with Japanese quirkiness this one's probably not worth it.

Calcolo!

This one is really more of a puzzle game than a shooter, but I decided to toss it in just in case. At a glance it might look similar to Twinkle Star Sprites, with you and your opponent controlling a flying character on each side of the screen, but instead of enemies flying in you've got actual "ochi" pieces slowly falling from the top – using the four face buttons you can make your character shoot in four directions, to either move pieces around, propel them to the bottom more quickly, or even destroy ones you don't want. It takes some time to get used to – otherwise, it's yet another Puyo Puyo chain-heavy variation, except that the number featured on each piece determines how many of that type are needed to clear them out (i.e. you need two "2" pieces, six "6" pieces, etc.), not to mention that you can shoot away falling garbage blocks if you're quick. Each character can also fill a super meter and unleash offensive or defensive specials, as well as pick up occasional speed or weapon powerups – this hybrid will be too unwieldy for many, but if you're not afraid of the occasional imperfect oddball in your collection you might want to keep an eye out. If you're interested in other puzzle games with a bit of shooter flavor you might also want to look for Finger Flashing, Toko Toko Trouble and Vermin Kids, but as with Calcolo they're something of an acquired taste and are not particularly easy to find.

The Pressing Need for a Special Prosecutor (2013-05-23 10:19)

Wednesday's appearance by the Internal Revenue Service's Lois Lerner coupled with the burgeoning scandal's reach into the White House –see this post by Townhall's Carol Platt Liebau–underscores the pressing need for the appointment by the Attorney General of a special prosecutor with wide ranging and independent authority to investigate the wrongdoing connected with the targeting of Tea Party and religiously-motivated tax-exempt groups by the IRS.

More on "targetgate" will appear soon at National Review Online by Eliana Johnson and other members of the NRO team that will confirm what a string of center-left and MSM commentators –Bloomberg's Jonathan Alter and Al Hunt and the New York Times' Michael Shear– have said on my radio show the past three days: The scandals are outrageous and the need for a special prosecutor is urgent.

Some of the journalists on the left have as their concern the salvaging of the Obama presidency before it enters into what would quickly become the longest second term in history, a prolonged drip, drip, drip of revelations and paralysis. They wish to spare the president the relentless grinding down of his office and thus of the country's ability to respond to crisis at home and abroad.

Some of us wouldn't mind paralysis of this presidency, at least with regard to the president's ambitions for domestic lawmaking, but a second and to my mind far more compelling reason for a special prosecutor than the protection of

the president's political standing is the protection of the innocent within and outside the government.

Political appointees often capture and pervert their efforts, or issue edicts that are beyond what Congress intended, and occasionally an ideologue within the career ranks will take an agency off the lawful path, but the career folks are nearly always straight shooters.

A special prosecutor is necessary not only to do justice to the injured –and there are hundreds of injured groups with tens of thousands of members– but also because the rapidly widening scandal at the IRS (and associated scandals involving the DOJ's snooping of journalists and the cover-up of the terrible events in Benghazi) is going to tarnish, damage and quite possibly ruin the lives and careers of many innocent, dedicated federal employees if it isn't quickly and thoroughly investigated and, where appropriate, prosecuted. The pall over the various agencies is already large and rapidly spreading. It has to be ended and the only way to end it is to appoint a special prosecutor and let him or her have at the sandals, having been charged to do so with thoroughness and urgency.

This was Al Hunt's position in an interview I conducted yesterday and it ought to be the position of anyone with a friend, family member or even a professional acquaintance within the impacted agencies, and it ought also to be the demand of every taxpayer who does not want the government they pay for to grind to a halt across large swaths of the bureaucracy doing the daily work of those agencies. Foley & Lardner's Cleta Mitchell –among the Beltway's best tax exempt organizations lawyers– said on my program yesterday that many of her clients are still waiting for their IRS rulings, applied for years ago. These are citizen-customers who deserve prompt, right responses from the IRS, and there are legions of similarly situated citizen-customers whose work is piling up undone as scandal mode sweeps through the federal alphabet agencies and the innocent dive for cover.

The Independent Counsel statute was a lousy law and no serious analyst –none– is calling for its revival.

But special prosecutors can accomplish their ends though the abuse of their charges is also possible. The answer to the potential for abuse isn't in carefully crafted charters but rather in the selection of an experienced prosecutor of great integrity and who enjoys bipartisan respect. There are such men and women in great numbers. Selecting a respected former United States Attorney from the Bush era in informal consultation with senior congressional leaders would work, would not be difficult to effect, and that individual's work could begin expeditiously.

No one –not the serious pundits on the left, not the Congressional committees, and most importantly not the public– trusts Attorney General Eric Holder or his political appointees at Justice to do this job. (Al Hunt is among the growing number of liberal commentators who want Holder gone completely, and Congressional Democrats in both the House and Senate facing tough re-elections are joining their number, fully aware what 18 months of investigations will do to their campaigns.)

The job of investigation and possibly prosecution of the IRS and Treasury officials responsible for this miscarriage simply has to be done, and it has to be done soon. By a man or woman in whom the public can repose trust.

When Did We Vote to Become Mexico? (2013-05-23 10:22)

At first I thought the IRS scandal was leaked to distract from the Benghazi scandal. But that didn't make sense because the IRS scandal is a more obvious abuse of power than the White House lying about the murder of four Americans in Libya.

Before I had resolved which scandal was distracting from which, we found out the Department of Justice was spying on The Associated Press – not to protect national security, but to prevent the AP from scooping the White House. Then, this week, it broke that the Department of Justice was also spying on Fox News for reasons that remain unexplained.

Meanwhile, Sens. Marco Rubio, Mitch McConnell, Lindsey Graham and John McCain are working feverishly to turn the country into Mexico.

So now I think all the scandals are intended to distract from Rubio's amnesty bill.

For decades, Mexicans have been about 30 percent of all legal immigrants to the United States, while only a smidgen more than 1 percent come from Great Britain. Is that fair? Granted, their food is better, but why is it the norm is to have nearly 30 times as many Mexican as British immigrants?

We have been taking in more immigrants from Guatemala, the Dominican Republic and Colombia, individually, than from England, our mother country. There are nearly twice as many immigrants from El Salvador as from Canada, and 10 times as many as from Australia.

Why can't the country be more or less the ethnic composition that it always was? The 50-1 Latin American-to-European ratio isn't a natural phenomenon that might result from, say, Europeans losing interest in coming here and poor Latin Americans providing some unique skill desperately needed in our modern, technology-based economy.

To the contrary, it's result of an insane government policy. Teddy Kennedy's 1965 Immigration Act was designed to artificially inflate the number of immigrants from the Third World, while making it virtually impossible for anyone from the nations that historically provided our immigrants to come here.

Pre-1965 immigrants were what made this country what it was for a reason: They were the pre-welfare state immigrants. From around 1630 to 1966, immigrants sank or swam. About a third of them couldn't make it in America and went home – and those are the ones who weren't rejected right off the boat for being sick, crippled or idiots.

That's why corny stories of someone's ancestors coming here a half-century ago are completely irrelevant. If their ancestors hadn't succeeded, their great-grandchildren wouldn't be here to tell the story because no one was given food stamps, free medical care and housing to stay. (And vote Democrat.)

Now we're scraping the bottom of the barrel by holding ourselves out as the welfare ward of the world and specifically rejecting skilled immigrants.

As Milton Friedman said, you cannot have open borders and a welfare state. The reason a country's average immigrant matters is that the losers never go home – they go on welfare. (Maybe if they had to work, immigrants wouldn't have as much time to build bombs.) Airy statements about wanting to end welfare aren't going to change that implacable fact.

It should not come as a surprise that a majority of recent immigrants are following a path that's the exact opposite of earlier immigrants. The immigrant story of lore is that the first generation is poor but works hard, then the second, third and fourth generations soar up the socioeconomic ladder.

But innumerable studies have shown that Mexican first-generation immigrants work like maniacs – and then the second, third and fourth generations plunge headlong into the underclass.

By now, Mexicans are the largest immigrant group in America, with about 50 million Hispanics living here legally.

Marco Rubio's amnesty bill will soon make it 80 million. First, there are at least 11 million illegal immigrants, a majority from Mexico, who will be instantly legalized. Then we'll get their entire extended families under our chain migration system.

I wouldn't want that many Japanese! I wouldn't want that many Dutch (not that there are that many Dutch)! Why do we have to become a different country? Was there a vote when the country decided to turn itself into Mexico? No other country has ever just decided to turn itself into another country like this.

The nation's plutocrats are lined up with the Democratic Party in a short-term bid to get themselves cheap labor (subsidized by the rest of us), which will give the Democratic Party a permanent majority. If Rubio's amnesty goes through, the Republican Party is finished. It will be the "Nancy Pelosi Democratic Party" versus the "Chuck Schumer Republican Party."

When that happens, the cover-up of murder in Benghazi, a little IRS abuse or governmental spying on journalists will be a good day for civil liberties.

A majority of Americans still do love this country – including, one hopes, legal immigrants who thought they were *leaving* Mexico. But a policy that will change America forever is about to slip through under the cloak of endless scandals from the corrupt Obama administration.

If you need more ice Machines infomation about How To Buy Commercial Ice Machines For Restaurant, Click here to find.

With the introduction of cutting ice Machines edge and innovative technologies, a commercial ice machine is no longer a bulky device producing insanitation, consuming a lot of energy, making noise, and taking a lot of time to make the needed supply of ice. As a result of high end technologies, commercial ice machines are able to achieve "being green" the highest levels of energy and water conservation. Now a commercial ice machine can easily produce from 65 pounds to 2,000 pounds of ice cubes in a day. You can find varied shapes of ice cubes such as dice, half dice, octagon, crushed, nugget, and flake.

Commercial ice machines are the standalone units,ice Machines designed to produce large quantities of ice for various commercial purposes. Once installed, these commercial ice makers are pretty automatic and do not need much attention from you or your staff. These factory-made machines consist of a condensing unit and ice-making section that operates as an integrated unit to make ice, an ice bin or a storage unit to store the created ice and a dispensing unit to dispense the ice out of the machine. Many automatic ice machines use moving water to create an improved quality of ice cubes. They work on the principle of "faster the water moves the better the ice quality becomes". In this process, the air and un-dissolved solids get washed away. This results in pure and clear ice production.

Large amounts of ice are demanded for various purposes in many ice Machines commercial entities such as Restaurants, Bars, Ice Cream Parlors, Bakeries, Country Clubs and Golf Courses. A commercial ice machine is the perfect choice for such places as the large quantity of ice also needs to be a certain quality as well. Automatic commercial ice machines will make plenty of ice of equal size in a short span of time. All you need to do is just start the machine and set the required functions, and leave

the rest up to the machine. You will get good quantity of quality ice in a short amount of time. In addition, many commercial ice machines come with a self cleaning function. This will help maintain the quality and quantity if the produced ice while decreasing the time that you and or your staff must spend with the machine.

Keep in mind that there are two varieties of ice machines: air cooled and waterice Machines cooled. Air cooled ice machines use air to disperse the heat, whereas water cooled ice machine uses water to do the same function. Air cooled ice machines use more energy and also are much noisier than water cooled ice machines. However, they are more affordable than water cooled ice machines.

An assorted collection of wonderful, fast and energy efficient commercial ice makers are readilyice Machines available in the market. Various renowned and reliable manufacturers have come up with their unique range of these amazing machines. Numerous models that create different types and sizes of ice are available in the local and online market. A competitive urge of creating more efficient and cost effective ice machines, has left the customers and consumers with a distinctive variety of these units in which to choose.

Central Planning in the Classroom (2013-05-31 08:58)

It is surprising that intellectuals oppose capitalism so. Other groups of comparable socio-economic status do not show the same degree of opposition in the same proportions. Statistically, then, intellectuals are an anomaly. Not all intellectuals are on the "left." Like other groups, their opinions are spread along a curve. But in their case, the curve is shifted and skewed to the political left.

By intellectuals, I do not mean all people of intelligence or of a certain level of education, but those who, in their vocation, deal with ideas as expressed in words, shaping the word flow others receive. These wordsmiths include poets, novelists, literary critics, newspaper and magazine journalists, and many professors. It does not include those who primarily produce and transmit quantitatively or mathematically formulated information (the numbersmiths) or those working in visual media, painters, sculptors, cameramen. Unlike the wordsmiths, people in these occupations do not disproportionately oppose capitalism. The wordsmiths are concentrated in certain occupational sites: academia, the media, government bureaucracy.

Wordsmith intellectuals fare well in capitalist society; there they have great freedom to formulate, encounter, and propagate new ideas, to read and discuss them. Their occupational skills are in demand, their income much above average. Why then do they disproportionately oppose capitalism? Indeed, some data suggest that the more prosperous and successful the intellectual, the more likely he is to oppose capitalism. This opposition to capitalism is mainly "from the left" but not solely so. Yeats, Eliot, and Pound opposed market society from the right.

The opposition of wordsmith intellectuals to capitalism is a fact of social significance. They shape our ideas and images of society; they state the policy alternatives bureaucracies consider. From treatises to slogans, they give us the sentences to express ourselves. Their opposition matters, especially in a society that depends increasingly upon the explicit formulation and dissemination of information.

We can distinguish two types of explanation for the relatively high proportion of intellectuals in opposition to capitalism. One type finds a factor unique to the anti-capitalist intellectuals. The second type of explanation identifies a factor applying to all intellectuals, a force propelling them *toward* anti-capitalist views. Whether it pushes any particular intellectual over into anti-capitalism will depend upon the other forces acting upon him. In the aggregate, though, since it makes anti-capitalism more likely for each intellectual, such a factor will produce a larger proportion of anti-capitalist intellectuals. Our explanation will be of this second type. We will identify a factor which tilts

intellectuals toward anti-capitalist attitudes but does not guarantee it in any particular case.

The Value of Intellectuals

Intellectuals now expect to be the most highly valued people in a society, those with the most prestige and power, those with the greatest rewards. Intellectuals feel *entitled* to this. But, by and large, a capitalist society does not honor its intellectuals. Ludwig von Mises explains the special resentment of intellectuals, in contrast to workers, by saying they mix socially with successful capitalists and so have them as a salient comparison group and are humiliated by their lesser status. However, even those intellectuals who do not mix socially are similarly resentful, while merely mixing is not enough—the sports and dancing instructors who cater to the rich and have affairs with them are not noticeably anti-capitalist.

Why then do contemporary intellectuals feel *entitled* to the highest rewards their society has to offer and *resentful* when they do not receive this? Intellectuals feel they are the most valuable people, the ones with the highest merit, and that society should reward people in accordance with their value and merit. But a capitalist society does not satisfy the principle of distribution “to each according to his merit or value.” Apart from the gifts, inheritances, and gambling winnings that occur in a free society, the market distributes to those who satisfy the perceived market-expressed demands of others, and how much it so distributes depends on how much is demanded and how great the alternative supply is. Unsuccessful businessmen and workers do not have the same animus against the capitalist system as do the wordsmith intellectuals. Only the sense of unrecognized superiority, of entitlement betrayed, produces that animus.

Why do wordsmith intellectuals think they are most valuable, and why do they think distribution should be in accordance with value? Note that this latter principle is not a necessary one. Other distributional patterns have been proposed, including equal distribution, distribution according to moral merit, distribution according to need. Indeed, there need not be any pattern of distribution a society is aiming to achieve, even a society concerned with justice. The justice of a distribution may reside in its arising from a just process of voluntary exchange of justly acquired property and services. Whatever outcome is produced by that process will be just, but there is no particular pattern the outcome must fit. Why, then, do wordsmiths view themselves as most valuable and accept the principle of distribution in accordance with value?

From the beginnings of recorded thought, intellectuals have told us their activity is most valuable. Plato valued the rational faculty above courage and the appetites and deemed that philosophers should rule; Aristotle held that intellectual contemplation was the highest activity. It is not surprising that surviving texts record this high evaluation of intellectual activity. The people who formulated evaluations, who wrote them down with reasons to back them up, were intellectuals, after all. They were praising themselves. Those who valued other things more than thinking things through with words, whether hunting or power or uninterrupted sensual pleasure, did not bother to leave enduring written records. Only the intellectual worked out a *theory* of who was best.

The Schooling of Intellectuals

What factor produced feelings of superior value on the part of intellectuals? I want to focus on one institution in particular: schools. As book knowledge became increasingly important, schooling—the education together in classes of young people in reading and book knowledge—spread. Schools became the major institution outside of the family to shape the attitudes of young people, and almost all those who later became intellectuals went through schools. There they were successful. They were judged against others and deemed superior. They were praised and rewarded, the teacher’s favorites. How could they fail to see themselves as superior? Daily, they experienced differences in facility with ideas, in quick-wittedness. The schools told them, and showed them, they were better.

The schools, too, exhibited and thereby taught the principle of reward in accordance with (intellectual) merit. To the intellectually meritorious went the praise, the teacher’s smiles, and the highest grades. In the currency the schools had to offer, the smartest constituted the upper class. Though not part of the official curricula, in the schools the intellectuals learned the lessons of their own greater value in comparison with the others, and of how this greater value entitled them to greater rewards.

The wider market society, however, taught a different lesson. There the greatest rewards did not go to the verbally brightest. There the intellectual skills were not *most* highly valued. Schooled in the lesson that they were most valuable, the most deserving of reward, the most entitled to reward, how could the intellectuals, by and large, fail to resent the capitalist society which deprived them of the just deserts to which their superiority “entitled” them? Is it surprising that what the schooled intellectuals felt for capitalist society was a deep and sullen animus that, although clothed with various publicly appropriate reasons, continued even when those particular reasons were shown to be inadequate?

In saying that intellectuals feel entitled to the highest rewards the general society can offer (wealth, status, etc.), I do not mean that intellectuals hold these rewards to be the highest goods. Perhaps they value more the intrinsic rewards of intellectual activity or the esteem of the ages. Nevertheless, they also feel entitled to the highest appreciation from the general society, to the most and best it has to offer, paltry though that may be. I don’t mean to emphasize especially the rewards that find their way into the intellectuals’ pockets or even reach them personally. Identifying themselves as intellectuals, they can resent the fact that intellectual activity is not most highly valued and rewarded. The intellectual wants the whole society to be a school writ large, to be like the environment where he did so well and was so well appreciated. By incorporating standards of reward that are different from the wider society, the schools guarantee that some will experience downward mobility later. Those at the top of the school’s hierarchy will feel entitled to a top position, not only in that micro-society but in the wider one, a society whose system they will resent when it fails to treat them according to their self-prescribed wants and entitlements. The school system thereby produces anti-capitalist feeling among intellectuals. Rather, it produces anti-capitalist feeling among verbal intellectuals. Why do the numbersmiths not develop the same attitudes as these wordsmiths? I conjecture that these quantitatively bright children, although they get good grades on the relevant examinations, do not receive the same face-to-face attention and approval from the teachers as do the verbally bright children. It is the verbal skills that bring these personal rewards from the teacher, and apparently it is these rewards that especially shape the sense of entitlement.

Central Planning in the Classroom

There is a further point to be added. The (future) wordsmith intellectuals are successful within the formal, official social system of the schools, wherein the relevant rewards are distributed by the central authority of the teacher. The schools contain another informal social system within classrooms, hallways, and schoolyards, wherein rewards are distributed not by central direction but spontaneously at the pleasure and whim of schoolmates. Here the intellectuals do less well.

It is not surprising, therefore, that distribution of goods and rewards via a centrally organized distributional mechanism later strikes intellectuals as more appropriate than the “anarchy and chaos” of the marketplace. For distribution in a centrally planned socialist society stands to distribution in a capitalist society as distribution by the teacher stands to distribution by the schoolyard and hallway.

Our explanation does not postulate that (future) intellectuals constitute a majority even of the academic upper class of the school. This group may consist mostly of those with substantial (but not overwhelming) bookish skills along with social grace, strong motivation to please, friendliness, winning ways, and an ability to play by (and to seem to be following) the rules. Such pupils, too, will be highly regarded and rewarded by the teacher, and they will do extremely well in the wider society, as well. (And do well within the informal social system of the school. So they will not especially accept the norms of the school’s formal system.) Our explanation hypothesizes that (future) intellectuals are disproportionately represented in that portion of the schools’ (official) upper class that will experience relative downward mobility. Or, rather, in the group that predicts for itself a declining future. The animus will arise *before* the move into the wider world and the experience of an actual decline in status, at the point when the clever pupil realizes he (probably) will fare less well in the wider society than in his current school situation. This unintended consequence of the school system, the anti-capitalist animus of intellectuals, is, of course, reinforced when pupils read or are taught by intellectuals who present those very anti-capitalist attitudes.

No doubt, some wordsmith intellectuals were cantankerous and questioning pupils and so were disapproved of by their teachers. Did they too learn the lesson that the best should get the highest rewards and think, despite

their teachers, that they themselves were best and so start with an early resentment against the school system's distribution? Clearly, on this and the other issues discussed here, we need data on the school experiences of future wordsmith intellectuals to refine and test our hypotheses.

Stated as a general point, it is hardly contestable that the norms within schools will affect the normative beliefs of people after they leave the schools. The schools, after all, are the major non-familial society that children learn to operate in, and hence schooling constitutes their preparation for the larger non-familial society. It is not surprising that those successful by the norms of a school system should resent a society, adhering to different norms, which does not grant them the same success. Nor, when those are the very ones who go on to shape a society's self-image, its evaluation of itself, is it surprising when the society's verbally responsive portion turns against it. If you were designing a society, you would not seek to design it so that the wordsmiths, with all their influence, were schooled into animus against the norms of the society.

Our explanation of the disproportionate anti-capitalism of intellectuals is based upon a very plausible sociological generalization.

In a society where one extra-familial system or institution, the first young people enter, distributes rewards, those who do the very best therein will tend to internalize the norms of this institution and expect the wider society to operate in accordance with these norms; they will feel entitled to distributive shares in accordance with these norms or (at least) to a relative position equal to the one these norms would yield. Moreover, those constituting the upper class within the hierarchy of this first extra-familial institution who then experience (or foresee experiencing) movement to a lower relative position in the wider society will, because of their feeling of frustrated entitlement, tend to oppose the wider social system and feel animus toward its norms.

Notice that this is not a deterministic law. Not all those who experience downward social mobility will turn against the system. Such downward mobility, though, is a factor which tends to produce effects in that direction, and so will show itself in differing proportions at the aggregate level. We might distinguish ways an upper class can move down: it can get less than another group or (while no group moves above it) it can tie, failing to get more than those previously deemed lower. It is the first type of downward mobility which especially rankles and outrages; the second type is far more tolerable. Many intellectuals (say they) favor equality while only a small number call for an aristocracy of intellectuals. Our hypothesis speaks of the first type of downward mobility as especially productive of resentment and animus.

The school system imparts and rewards only *some* skills relevant to later success (it is, after all, a specialized institution) so its reward system will differ from that of the wider society. This guarantees that some, in moving to the wider society, will experience downward social mobility and its attendant consequences. Earlier I said that intellectuals want the society to be the schools writ large. Now we see that the resentment due to a frustrated sense of entitlement stems from the fact that the schools (as a specialized first extra-familial social system) are not the society writ small.

Our explanation now seems to predict the (*disproportionate*) resentment of schooled intellectuals against their society whatever its nature, whether capitalist or communist. (Intellectuals are disproportionately opposed to capitalism as compared with other groups of similar socioeconomic status within capitalist society. It is another question whether they are disproportionately opposed as compared with the degree of opposition of intellectuals in other societies to those societies.) Clearly, then, data about the attitudes of intellectuals within communist countries toward apparatchiks would be relevant; will those intellectuals feel animus toward *that* system?

Our hypothesis needs to be refined so that it does not apply (or apply as strongly) to every society. Must the school systems in every society inevitably produce anti-societal animus in the intellectuals who do not receive that society's highest rewards? Probably not. A capitalist society is peculiar in that it seems to announce that it is open and responsive only to talent, individual initiative, personal merit. Growing up in an inherited caste or feudal society creates no expectation that reward will or should be in accordance with personal value. Despite the created expectation, a capitalist society rewards people only insofar as they serve the market-expressed desires of others; it rewards in accordance with economic contribution, not in accordance with personal value. However, it comes close enough to rewarding in accordance with value—value and contribution will very often be intermingled—so as to nurture the expectation produced by the schools. The ethos of the wider society is close enough to that of the schools so that the nearness creates resentment. Capitalist societies reward individual accomplishment or announce

they do, and so they leave the intellectual, who considers himself most accomplished, particularly bitter. Another factor, I think, plays a role. Schools will tend to produce such anti-capitalist attitudes the more they are attended together by a diversity of people. When almost all of those who will be economically successful are attending separate schools, the intellectuals will not have acquired that attitude of being superior to *them*. But even if many children of the upper class attend separate schools, an open society will have other schools that also include many who will become economically successful as entrepreneurs, and the intellectuals later will resentfully remember how superior they were academically to their peers who advanced more richly and powerfully. The openness of the society has another consequence, as well. The pupils, future wordsmiths and others, will not know how they will fare in the future. They can hope for anything. A society closed to advancement destroys those hopes early. In an open capitalist society, the pupils are not resigned early to limits on their advancement and social mobility, the society seems to announce that the most capable and valuable will rise to the very top, their schools have already given the academically most gifted the message that they are most valuable and deserving of the greatest rewards, and later these very pupils with the highest encouragement and hopes see others of their peers, whom they know and saw to be less meritorious, rising higher than they themselves, taking the foremost rewards to which they themselves felt themselves entitled. Is it any wonder they bear that society an animus?

Some Further Hypotheses

We have refined the hypothesis somewhat. It is not simply formal schools but formal schooling in a specified social context that produces anti-capitalist animus in (wordsmith) intellectuals. No doubt, the hypothesis requires further refining. But enough. It is time to turn the hypothesis over to the social scientists, to take it from armchair speculations in the study and give it to those who will immerse themselves in more particular facts and data. We can point, however, to some areas where our hypothesis might yield testable consequences and predictions. First, one might predict that the more meritocratic a country's school system, the more likely its intellectuals are to be on the left. (Consider France.) Second, those intellectuals who were "late bloomers" in school would not have developed the same sense of entitlement to the very highest rewards; therefore, a lower percentage of the late-bloomer intellectuals will be anti-capitalist than of the early bloomers. Third, we limited our hypothesis to those societies (unlike Indian caste society) where the successful student plausibly could expect further comparable success in the wider society. In Western society, women have not heretofore plausibly held such expectations, so we would not expect the female students who constituted part of the academic upper class yet later underwent downward mobility to show the same anti-capitalist animus as male intellectuals. We might predict, then, that the more a society is known to move toward equality in occupational opportunity between women and men, the more its female intellectuals will exhibit the same disproportionate anti-capitalism its male intellectuals show.

Some readers may doubt this explanation of the anti-capitalism of intellectuals. Be this as it may, I think that an important phenomenon has been identified. The sociological generalization we have stated is intuitively compelling; something like it must be true. Some important effect therefore must be produced in that portion of the school's upper class that experiences downward social mobility, some antagonism to the wider society must get generated. If that effect is not the disproportionate opposition of the intellectuals, then what is it? We started with a puzzling phenomenon in need of an explanation. We have found, I think, an explanatory factor that (once stated) is so obvious that we must believe it explains some real phenomenon.

Updated Playstation 4 impressions (2013-06-10 23:23)

I'll make this brief. Just finished watching Sony's press conference. I couldn't believe it.

No DRM, no restrictions on used games, a cavalcade of interesting exclusives (including Final Fantasy XV and Kingdom Hearts 3) and it's \$100 cheaper than the Xbox One! I think Sony just launched a major offensive against Microsoft, and consumer reaction has, thus far, been remarkably swift. However, the only bad thing about the PS4 is that PlayStation Plus will be required for online play, which is similar to the Xbox 360's Live subscription service, but for offline single player games, it's not needed.

The console design itself, the one thing I was personally looking forward to seeing, looks uniquely strange, but serviceable.

Sony played their cards right and handily sucker-punched the Xbox One like Rocky through Clubber Lang's face, but don't declare the PS4 the automatic victor just yet. Microsoft has yet to respond to the press conference. And from the looks of things, they've got a lot of holes to plug in that sinking ship of theirs!

But, in all fairness, I wish both consoles the best success. For now, it seems, Sony's gained the advantage in this latest war between video game consoles.

Playstation 4 runs FreeBSD 9.1! (2013-07-07 19:51)

PlayStation 4 (PS4) is an upcoming video game console from Sony Computer Entertainment. Announced as the successor to PlayStation 3 during a press conference on February 20, 2013, it will launch on November 15, 2013, in North America, and November 29, 2013, in Europe and Australia,[9][10] and will compete with Nintendo's Wii U and Microsoft's Xbox One, as part of the eighth generation of video game consoles.

Moving away from the complicated Cell architecture of the PlayStation 3, PlayStation 4 will feature a simpler AMD processor, in hopes of attracting a broader range of developers and support for the system. Sony also plans to place more focus on social gameplay, incorporating a "share" button on the new controller and making it possible to view in-game play streamed live from friends. The console will focus on interactivity with other services and devices, including Gaikai, a cloud-based gaming service that will offer streaming video game content; PlayStation App, which will connect smartphones and tablets into a second screen to enhance gameplay; and PlayStation Vita, which will be able to play a majority of the games through Remote Play.

Contents

According to lead architect Mark Cerny, development on Sony's eighth-generation video game console began as early as 2008. Less than two years earlier, PlayStation 3 had launched after months of delays due to issues in production. The delay placed Sony almost a year behind Microsoft's Xbox 360, which was already approaching 10 million units sold by the time the PS3 launched. PlayStation Europe CEO Jim Ryan said Sony wanted to avoid repeating the same mistake with PS3's successor.

In 2012, Sony began shipping development kits to game developers consisting of a modified PC running the AMD Accelerated Processing Unit chipset. These development kits were known as Orbis. In early 2013, Sony announced that an event known as PlayStation Meeting 2013 would be held in New York City on February 20, 2013, to cover the "future of PlayStation". Sony officially announced PlayStation 4 at the event. They revealed details about the console's hardware and discussed some of the new features it will introduce. Sony also showed off real-time footage of games in development, as well as some technical demonstrations. Sony released more information about the console and presented the device itself in June 2013 at the Electronic Entertainment Expo.

The company revealed release dates for North America, Central America, South America, Europe & Australia as well as final pieces of information at the Gamescom conference in Cologne, Germany on August 20, 2013. The console will be released on November 15, 2013 in the United States and Canada, followed by further releases on November 29,

2013, in Australia, Europe, North America, Central America & South America. The PS4 has also been scheduled for a December 2013 launch in South Korea, Hong Kong, Taiwan, Singapore and Malaysia, ahead of the console's Japanese debut on February 22, 2014.

Hardware

The console design was not revealed at the press conference revealing the console, since the design and specifications were still being finalized. However, some technical specifications about the console were announced. The technology in PlayStation 4 will be relatively similar to the hardware found in personal computers. This familiarity should make it easier and less expensive for game studios to develop games for PS4. The physical console was finally unveiled by Sony at E3 2013.

According to Eurogamer, Sony will make a loss of \$60 per unit sold for \$399 at launch, but expect to immediately recoup the losses through PlayStation Plus subscriptions and game sales.

Technical specifications

Main article: PlayStation 4 technical specifications

PlayStation 4 will use a processor developed by AMD in cooperation with Sony. It will combine a central processing unit (CPU) and graphics processing unit (GPU), as well as other components such as a memory controller and video decoder. The CPU consists of two quad-core Jaguar modules totaling 8 x86-64 cores. The GPU consists of 18 compute units to produce a theoretical peak performance of 1.84 TFLOPS. The system's GDDR5 memory is capable of running at a maximum clock frequency of 2.75 GHz (DDR equaling 5500 MHz).[32][33] The console will contain 8 GB of GDDR5 memory, 16 times the amount of RAM found in the PS3 and is expected to give the console considerable longevity. It also includes secondary custom chips that handle tasks associated with downloading, uploading, and social gameplay. These tasks can be handled seamlessly in the background during gameplay or while the system is in sleep mode. The console also contains an audio module, which can support in-game chat as well as "a very large number" of audio streams for use in-game.

Its read-only optical drive is capable of reading Blu-ray Discs at speeds of up to three times that of the PS3's. The console will feature a hardware on-the-fly decompression module boosting optical disc reading speed and buffer unread data when a game is not actively accessing the optical drive, forming part of Sony's PlayGo strategy. Like PlayStation 3, the Blu-ray Disc drive should be capable of reading 16-layer 400 GB discs. Although the console will support photos and videos at 4K resolution, the system is not expected to be able to render games beyond 1080p. The console will include a 500 gigabyte hard drive for additional storage,[44] which can be upgraded by the user.

PlayStation 4 will feature WiFi and Ethernet connectivity, Bluetooth, and two USB 3.0 ports. An auxiliary port will also be included for connection to the PlayStation Camera, a motion detection digital camera device first introduced on the PS3. A mono headset, which can be plugged into the DualShock 4, will come bundled with the system. Audio/video output options include HDMI TV and optical S/PDIF audio. The console does not have an analog audio/video output. Although not available on the system at launch, the PS4 will feature a 'Suspend mode' feature. This places the console in a low-power state, while allowing users to immediately resume their game once the console is awoken. The console will also be able to download content such as game and OS updates while it is in this state.[49][50]

Controllers

Main articles: DualShock 4 and PlayStation Move

PlayStation Move controllers

DualShock 4 will be PlayStation 4's primary controller, retailing at US \$59/€59/£54. Similar to the DualShock 3, it will connect to the console via Bluetooth 2.1+EDR. The DualShock 3, however, will not be compatible with PS4. The DualShock 4 will be equipped with several new features, including a built-in two-point capacitive touch pad on the front of the controller, which is clickable. The controller will support motion detection via a three-axis gyroscope and three-axis accelerometer and improved vibration, as well as being the first PlayStation first-party controller to feature official support for the Windows PC platform. It will include a non-removable,[55] rechargeable lithium-ion battery tentatively capable of storing 1000 mAh. The tentative design weighs 210 g (7.4 oz), has dimensions of 162 × 52 × 98 mm (6.4 × 2.0 × 3.9 in), and has a rubber or etched plastic backing to enhance grip. The design shown at Sony's launch event was "near final".

DualShock 4 controller

The controller will feature several output connectors. Its stereo jack (3.5 mm TRRS connector) will support the con-

nection of a headset to allow a user to speak and hear audio simultaneously. A micro-USB port, an extension port, and a mono speaker will also be included. The controller can be charged via micro-USB, a dedicated charging station, or the console (even when the console is off).

DualShock 4 will feature the following buttons: PS button, SHARE button, OPTIONS button, directional buttons, action buttons (triangle, circle, cross, square), shoulder buttons (R1/L1), triggers (R2/L2), analog stick click buttons (L3/R3) and a touch pad click button. These mark several changes from the DualShock 3 and other previous PlayStation controllers. The START and SELECT buttons have been merged into a single OPTIONS button. A dedicated SHARE button will allow players to upload videos from their gameplay experiences. The joysticks and triggers have been redesigned based on developer input. The joysticks now will feature a concave surface.

DualShock 4 will also feature a light bar that can display different colors. The colors will help identify players and alert them with critical messages such as low health.[46] It also will interact with a camera attachment that perceives movement and depth by using the controller's light bar. It is based on the existing technology used in the PlayStation Move. Existing PlayStation Move controllers will be supported on PS4.

PlayStation Camera

PlayStation Camera device

PlayStation Camera, initially named PlayStation 4 Eye, is a motion sensing input device for PlayStation 4. It will include two 1280×800px cameras. The lenses will operate with an aperture of f/2.0, with 30 cm focusing distance, and an 85° field of view.[46] The dual camera setup will allow for different modes of operation, depending on the target application. The two cameras can be used together for depth-sensing of objects in its field of vision, akin to the Xbox 360's Kinect peripheral.[59] Alternatively, one of the cameras can be used for generating the video image, with the other used for motion tracking.

PlayStation Camera will also feature a four-channel microphone array, which helps reduce unwanted background noise and may even be used to issue commands.[57] It is tentatively set to be 186 × 27 × 27 mm (7.3 × 1.1 × 1.1 in) (width × height × depth), with a weight of 183 grams (6.5 oz). It will record video in RAW and YUV (uncompressed) formats and will connect to the console via an auxiliary port.[46] The PlayStation Camera will be released as a separate, add-on accessory,[44] priced at US \$59/€49/£44.

Companion devices

Main article: Remote Play

Smartphones, tablets, and PlayStation Vita can interact with PlayStation 4 as second screen devices. Companion devices can also wake the console from sleep mode.

PlayStation Vita can be used for streaming video directly from the console to the handheld, allowing supported games to be played remotely.[62] Sony hopes to make all PS4 games playable on PlayStation Vita. Developers can add Vita-specific controls for use via Remote Play.

The PlayStation App will allow mobile devices to interact with PlayStation 4, similar to Xbox SmartGlass. It will be available for iOS and Android smartphones and tablets.[24] Gamers can use this application to, for example, purchase PS4 titles while away from home and have them remotely downloaded to the console, watch live streams of other gamers, and view in-game maps while playing games.

Software and services

PlayStation 4 system software screenshot shown at the 2013 meeting

PlayStation 4 runs an operating system called "Orbis OS." The current prototypes are based on the FreeBSD operating system. Although the console does not require an Internet connection to function, it will provide "richer" functionality when it is connected to the internet. The PlayStation Network (PSN) will allow players to access a variety of cloud-based services from PlayStation Store, including Music Unlimited and Video Unlimited subscription services. Customers can browse titles and stream games via Gaikai to demo them almost instantaneously. Online multiplayer access requires a subscription to PlayStation Plus, a policy new to PlayStation consoles, but free-to-play titles such as DC Universe Online, PlanetSide 2 and Warframe will be playable without a subscription, and asynchronous functions such as online leaderboards can still be accessed.[68] Furthermore, owing to the need to subscribe for online multiplayer, Sony will not allow online passes to be used on the system by any publisher. Sony intends to expand and evolve the services it offers over the console's lifespan.

User interface

PlayStation 4 will replace the XrossMediaBar with a new customizable interface titled PlayStation Dynamic Menu. The user profile for players will show recent activity, their full name, and other details in addition to their unlocked Trophies. The PS4 home screen will feature personalized content from friends. Services from third-party vendors, such as Netflix and Amazon Instant Video, will also be accessible within the new interface. It will be possible to multitask during gameplay, such as opening a web browser while playing a game.

Social features

Sony is focused on "social" aspects as a major feature of the console. Although the console will have improved social functionality, the features are optional and can be disabled. Gamers will have the option to use real names with friends, in addition to a nickname in other situations when anonymity is important.

Sharing

The DualShock 4 controller includes a "share" button, allowing the player to cycle through the last 15 minutes of gameplay to select a screenshot or video clip appropriate for sharing. Media is uploaded seamlessly from the console to other PSN users or social networking sites such as Facebook and Twitter.

"Ustream's integration within PS4 consoles will put gamers on a new media field. They will have the ability to direct, produce, and star in their own video game production, simply by being an awesome (or not so awesome!) gamer."

—Ustream co-founder Brad Hunstable

Live broadcasting

Gamers can browse live video of titles their friends are playing through the PS4 interface, with cross-game camera and microphone inputs, spectate or assist in their game to help them overcome difficult obstacles, and broadcast live video of one's own gameplay via public services Twitch and Ustream, allowing friends to view and comment on them from other web browsers and devices.

Games

See also: List of PlayStation 4 games

Sony Computer Entertainment of America chief executive officer Jack Tretton said games for PlayStation 4 will range in price from US \$0.99 to \$60.00. Games on PlayStation 4 will not be region-locked, so games purchased in one region can be played on consoles in all regions. Additionally, gamers can trade, lend, and re-sell their games, as buying a game means it is owned by them forever.

Sony hopes to make it easier for independent game developers to develop titles for PS4.[29] At the 2013 E3 Sony event, the company revealed that they will allow developers to self-publish their titles on PlayStation Network for PlayStation 3, 4, and Vita systems.[80] The company further announced at least ten indie titles that will make their console debut on PlayStation 4 by the end of 2013.

In addition to the physical media available at retailers, all PlayStation 4 titles can be purchased online.[82] Additionally, every game can be test played for free.[83] Players can sign into any PS4 console to access their entire digital game library. Sony will not prohibit the trading of disc-based games and will not require the console to periodically check in online to validate game legitimacy.

The system will feature downloadable content similar to what is available on other PlayStation platforms.

PlayGo

PlayGo will allow quicker access to supported games. When a title is selected online, only a portion of the game data has to be transferred to the system before it can be started (e.g. the first level), with the remaining parts downloading during play, reducing waiting time. If users prefer to play their game directly from disc, PS4 will install data to the hard drive during play, eliminating loading times. This is accomplished via the system's secondary processor. Similarly, system updates are downloaded seamlessly in the background without interruption. PS4 also features technology that attempts to determine trends, including titles a gamer is likely to express interest in next, and then automatically download a small percentage of those games in the background, even in sleep mode, in order to save time.

Backward compatibility

Sony has confirmed that PlayStation 4 will not natively support PlayStation 3 games. While the company has yet to also rule-out on-console emulation of some previous generations, the company has detailed plans to explore cloud-based emulation of previous generations as a long-term solution to the challenges of backwards compatibility.

Sony is planning to launch a cloud-based streaming service through Gaikai, a company acquired by Sony in July 2012. The service will emulate and render previous generations of PlayStation games, streaming them to the PS4 and the

Vita, over the internet.

Reception

Reception to the console from developers and journalists has been positive.

Mark Rein of Epic Games praised the "enhanced" architecture of Sony's system, describing it as "a phenomenal piece of hardware".[92] John Carmack, programmer and co-founder of id Software, also commended the design by saying "Sony made wise engineering choices", while Randy Pitchford of Gearbox Software expressed satisfaction with the amount of high-speed memory in the console.

Eurogamer called the graphics technology in the PS4 "impressive" and an improvement from the difficulties developers experienced on PlayStation 3.[35] Ted Price, president and CEO of Insomniac Games, said: "As a longtime partner of Sony's we've enjoyed some pretty awesome console tech over the last couple of decades and it looks like the PS4 will continue that trend. I think most of us in the console development world are always looking for more horsepower, more memory, more storage, faster load times... Sony showed clear evidence that we're getting those boosts with this console. However since we at Insomniac love creating new IP, what seems particularly cool is the Gaikai streaming which should allow you to experience console IP on different types of devices."

After Sony's E3 2013 press conference, IGN responded positively to Sony's attitude towards indie developers and trading games, stating they thought "most gamers would agree" that "if you care about games like [Sony] do, you'll buy a PlayStation 4." PlayStation 4's removable and upgradable hard drive also drew praise from IGN, with Scott Lowe commenting that the decision gave the PS4 "another advantage" over the Xbox One, for which the hard drive cannot be accessed.

GameSpot called PlayStation 4 "the gamer's choice for next-generation", citing its price, lack of restrictive digital rights management, and most importantly, Sony's efforts to "acknowledge its consumers" and "respect its audience" as major factors.

Sales

As of August 2013, SCEE has been quoted as saying that over one million preorders have been placed for PlayStation 4.

Brazil

On October 17, 2013, Sony announced that the PlayStation 4 will cost R \$3,999. The cost was explained by a Sony Brazil representative to be largely due to the Brazilian government's high import charges, which were estimated to make up 60-70 % of the cost. Mark Stanley, Sony's general manager of Latin America, released a statement on October 21 with regards to the price of the PlayStation 4. The included chart shows the Brazilian government's taxes and import fees are 63 % (R \$2,524), which in addition to other fees, raised the price of the PlayStation 4 to R \$3,999. Stanley also stated that Sony is in discussions with Brazilian officials to reduce the import taxes and fees, and will try to begin locally producing the PlayStation 4 to reduce the price, as it did with the PlayStation 3.

After Sony's E3 2013 press conference, IGN responded positively to Sony's attitude towards indie developers and trading games, stating they thought "most gamers would agree" that "if you care about games like [Sony] do, you'll buy a PlayStation 4." The PlayStation 4's removable and upgradable hard drive also drew praise from IGN, with Scott Lowe commenting that the decision gave the PS4 "another advantage" over the Xbox One, which has an inaccessible HDD. GameSpot also states that PlayStation 4 is "the gamer's choice for next-generation", citing the price, the lack of restrictive digital rights management, and most importantly, Sony's efforts to "acknowledge its consumers" and "respect its audience" as major factors. GameSpot editor Tom McShea wrote that "by saying no to the used game restrictions and always-online that Microsoft is so happily implementing on the Xbox One, Sony has elevated the PlayStation 4 as the console to grab this holiday season."

Engineering Your Online Reputation

Regard your good name as the richest jewel you can possibly be possessed of—for credit is like fire; when once you have kindled it you may easily preserve it, but if you once extinguish it, you will find it an arduous task to rekindle it again. The way to a good reputation is to endeavor to be what you desire to appear.

—Socrates (circa 469 BCE–399 BCE), Greek Philosopher

INTRODUCTION TO SOCIAL MEDIA MANAGEMENT

Can you remember a time when we did not have the Internet? Some of us can remember when we had to rely upon the story or message that a business placed in its newspaper advertisement. We may have seen a TV ad that embellished the “facts” about a product, but we had no way of knowing if those words were true.

Have you ever stood at the fax machine and impatiently waited for your 12 pages to go through successfully? What about playing phone tag with an integral part of your engineering team? Not too long ago, engineers had to fly to meetings, stay in hotels, put up with unintelligible conference calling systems, be away from their families, and hope that the important people made it to the same meeting.

In 2012, the McKinsey Global Institute released a study entitled *Unleashing Value and Productivity Through Social Technologies*, where it is estimated that social media could add \$1.3 trillion to the economy in the next six years. Of special note were the fields of automotive, mechanical, and aerospace engineering. T

Introduction to Social Media Management

Quentin Hardy, states that “since they work with a lot of autonomy, but also in consultation with others, [engineers] benefit the most from knowing such things as which employees have the deepest knowledge in certain subjects, or who last contributed to a project, and how to get in touch with them quickly.”

Typically, engineering positions are a collaborative-type of work environment and their communication efforts do not function well using the “one-way street” model anymore. Now that social interaction venues are prevalent in the workplace, there is no turning back to the old way of thinking—relying on word-of-mouth or believing the company line. Employees and employers are diligently working proactively to be

informed, stay informed, and share vitally important data with others in worldwide collaborations that bring startling results.

Of course, TV ads still scream as we passively sit on our couches and soak in the information. And, consumers still largely base their opinions on the story that they are told by whoever paid for the newspaper, television, magazine, or radio advertisement. Some of that one-way information model will never be obsolete.

Historically, employees believed what they were told, and interacting with other divisions within the same organization, or affiliate organizations was seen as somewhat traitorous. Social media platforms change all that. “The proper use of social media tools adds to productivity, an improved consumer focus as well as better-functioning teams. Data and knowledge are exposed and shared instead of being hoarded,” says Michael Chui, one of the authors of the McKinsey report.

Entering the Internet Age

The Internet has brought a virtual tidal wave of new possibilities, ideas, and methods that engineers can use for communicating to the world and has blown the one-way communication model to smithereens. The most profound change is that social media, and the messages contained therein, are not owned by any business or organization. Social media are owned by all of us. Engineers collaborating on one project, from all over the world or in the next cubicle is what it is all about!

In her book, *The Zen of Social Media Marketing*, Shama Kabani states that social media consists of “multiple online mediums all controlled by the people participating within them—people who are busy having conversations, sharing resources, and forming their own communities. Unlike radio, television, and print, it isn’t passive—users don’t just receive content; they create it, too.”

There is one element that historical marketing and social media campaigns have in common. Both methods are designed to get consumers to take some kind of action. Businesses still design and implement advertising campaigns to encourage consumers to take action. The Internet provides a broader platform for engineering businesses and

organizationstopromotetheirwaresbyleveragingawell-defined, strategically planned, and open communication style that encourages online communities (composed of consumers) to contribute to the message and branding of the product or service.

What the Internet and social media channels bring to the old marketing equation is that consumers have stepped into the massively important role of using their own voice to encourage or discourage other consumers to take action. Consumers use their positive or negative experiences to influence other consumers; this process is a powerful component of social media communities.

Conquering Your Fears of Social Media

Social media has become a source of fear and confusion for many. As with anything new, there are fear-mongers and critics. There are also champions and evangelists. This new method of communication can be wildly successful for engineering businesses, or it can be an abysmal failure.

This chapter should dispel some of the confusion associated with using social media to promote yourself or your business. You will find a social media venue that fits your needs. Discussed in the following pages are five of the most widely used social venues, including WordPress blogs, Facebook, Twitter, LinkedIn, and Google+.

Some experts believe that having no online presence is tantamount to having a bad

online reputation. Have you ever read a bad review of a restaurant online and then decided not to go? What would you do if that restaurant's manager had responded to the bad review and helped the disgruntled customer? Would you give the restaurant a second chance? Most of us would. This is one way that social media can benefit businesses.

An umbrella that charges
a smart phone?

Vodafone's Booster Brolly is an umbrella that uses on-board solar cells and a microantenna to charge your phone and boost its 3G signal. Engineering students at University College of London worked with Vodafone to develop this cool technology.

For details, see the Preface for the URL.

But social media is not just for entertainment. Information Week Security performed a survey of 1,153 engineers in 2010 and found that, "of those who work in the aerospace, automotive, and commercial-vehicle industries, 55 % of respondents said they use social media sites for work-related reasons, and that over half are allowed access while at work." ³

Social media is not a get-rich-quick scheme, and it does not transform your life or engineering business overnight. It is, however, necessary for success in today's digital world.

Creating a WordPress Blog

CREATING A WORDPRESS BLOG

Chances are that you have read an engineering blog within the past month. You may have visited that blog on purpose, you may have stumbled upon it by accident, or you may have landed on the blog and never knew that it was a "blog."

Understanding What a Blog Is

A "weblog," or "blog" for short, is a specific type of website that is interactive. The site is supposed to be updated frequently with new articles and information about specific topics. Blogs contain information from lots of different sources. For example, blogs' owners (called "bloggers") can write articles themselves, or they can post articles that they found on other websites. The information can also originate in print, or it can be contributed by the readers of the blog.

That is it. There is nothing mysterious about a blog. There are CEO blogs, celebrity blogs, food blogs, travel blogs, graphic design blogs, architecture blogs and engineering blogs. Actually, there are too many types of blogs to list. The most important thing to remember about a blog is that it is interactive and should be constantly changing. This

characteristic benefits both the reader and the blogger.

Participating in a Blog

By viewing and participating in a blog, engineers can be educated, drawn in to a worthwhile conversation, join an online community of like-minded people, help build a branding strategy, shape ideas by giving their opinion, or give advice to product designers. Therefore, readers benefit by receiving information, ideas, or the chance to get their opinion out there.

No matter what the reason is for creating the blog, the blog's creator must remember that the blog reader is a partner in the success of that blog. Perhaps some bloggers want to become engineering experts in the "Bending Moment." If that is the case, their blogs will reflect their expertise in the elements involved in the Bending Moment. Those bloggers would use titles and searchable keywords to funnel traffic to their blog about the Bending Moment. This will allow the engineering blog to be found by those who are searching for this topic.

Using a Blog for Professional Advantage

Engineers often use their blogs as a means of collaboration and networking within their field. Blogs are an excellent platform to give and receive advice and expertise from others engineers in your field. Who knows—you may end up getting an engineering job from a blogging contact! For example, a small group of engineers has created a 248 Chapter 12 Engineering Your Online Reputation blog and the tagline for their site is "Engineers writing about the workplace, common engineering problems, and lessons to share with the world." 4

Here is an example of using a blog to build a reputation as an engineering expert:

1. Blogger A (an engineer) needs advice from experts about a faulty modeling process. He finds several blogs that discuss this topic, and he poses some questions on the blogs. By posting his question on a well-known blog, he increases the visibility of his own blog.
 2. Blogger B, an engineering expert in the area of faulty modeling processes, sees the post (by Blogger A). Because she is trying to build her online reputation as an expert in faulty modeling processes, she posts a reply to Blogger A's question. She has just "advertised" to the world that she is an expert in faulty modeling processes.
 3. After several online (and highly visible) conversations, Blogger A takes the advice of Blogger B. He follows the steps advised by Blogger B, and the issue with the faulty modeling process is resolved!
 4. Blogger A thanks Blogger B (again, online for all to see) for the great advice and tells her that her advice resolved his issue. Blogger A looks good to his clients or employer because he resolved the faulty modeling issue.
 5. Blogger B has furthered her efforts at building her reputation as an expert in faulty modeling processes. Her advice contributed to a real-life project.
 6. Six months later, a person (prospective new client) conducts a search about "faulty modeling process." The related engineering blog comes up in the search because Blogger A's and Blogger B's posts used searchable keywords. The person sees both sides of the conversation on the blog and sees that Blogger B resolved the issue for Blogger A. The person sees Blogger B as an expert and contacts her to help resolve a similar issue.
 7. Blogger B scores some new business because of her online reputation!
- In the above example, all the engineers win via the use of this blog. Blogging brings people together even if they live in three different countries and never meet each other in person.

See www.electricalengineeringonline.net/engineering-blogs for a list of the 50 top engineering blogs found on the Internet.

Choosing Your Blog Software

Engineering students and professionals alike can benefit from creating their own blogs. You might think that the example about Blogger A and B was make-believe. Fortunately for you and other professional engineers throughout the world, the scenario happens every day. The sky is the limit when it comes to the usefulness of blogging for engineers.

Creating a WordPress Blog 249

Currently, the most user-friendly and intuitive blogging software available is WordPress. Visit its site at: <http://wordpress.org>

WordPress has some excellent characteristics:

- It can be used to set up a free blog, although you can set up a custom URL for as little as \$17 per year.
- It does not require a single bit of programming knowledge.
- It comes with countless tutorials and technical support.
- It can be used for e-commerce by adding a shopping cart just in case you ever decide to monetize all of your expertise!
- It can be updated or reorganized easily by a complete novice.
- It offers almost limitless graphic themes to promote yourself as an individual or for your company brand, including custom colors, layouts, widgets, and graphics.
- It provides constant updates for free.

Exploring Engineering Blogs

If you are to understand blogging, you will have to visit a few. To find blogs that are relevant to engineering, it is as simple as typing “engineering blog” into any search engine. There are websites that rank the best engineering blogs on the Internet, too. That is the best place to start your search. For example, type the following in your browser: www.invesp.com/blog-rank/Engineering

Once you see the list of the top 25 engineering blogs, choose several to view. While you are viewing each blog, consider the following:

- Is the blog visually attractive or distracting?
- Is the content relevant and up-to-date?
- Is it easy to see what specific areas are discussed on this blog?
- Is there an easy way to interact with the blog’s creator?
- If needed, does the blog provide evidence of professional engineering clout?

Turning body heat into energy?

Now there is a new source of power that could be put to use; human body heat. Engineers in Stockholm are the first to use the body heat of 250,000 daily commuters in one train station to heat a building next door. Wow.

For details, see the Preface for the URL.

After reading a few blogs, you will

begin to understand the differences in style, content, and professionalism. You will also see the big difference between a traditional information-only website and the interactivity of a blog.

Remember, the main point to keep in mind is that a blog gives you the ability to interact with the blogger and others who view the blog. When thinking about designing your blog, make sure that the conversational style, community feel, and content are all open and inviting.

BUILDING A FACEBOOK PAGE

FOR A BUSINESS

If you have never heard of Facebook, then you have probably been living under a rock.

Here are some factoids about Facebook's worldwide reach:

- Facebook is used by 70 % of automotive and aerospace engineers to exchange information on technical issues, according to a survey of SAE International. 5
- Facebook had over one billion monthly active users at the end of December 2012.
- On average, it had 526 million daily active users.
- In March 2012, there were 488 million monthly active users who used Facebook mobile applications.
- Facebook had more than 600 million mobile monthly active users as of December 5, 2012.
- During December 2012, on average 500 million users were active with Facebook on at least six out of the last seven days. 6

Harnessing the Power of Facebook

If you were offered a customized advertising campaign for your engineering business—and it promised to reach millions of people, worldwide for free—would you bite? What if you were offered unlimited access to a panel of 10,000 civil engineering experts (from all over the world) that could help you unravel an issue with a traffic pattern—again, all for free?

Consider this:

Did you know that every single person who interacts with your company or organization via social media inadvertently becomes your cheerleader or critic? You may have heard the old adage that if you like a business, you will tell three people. If you don't like it, you will tell ten people.

This phenomenon is what makes applications like Facebook such great venues for engineers. Originally, Facebook was created to allow college students to connect

and share ideas, stories, events, and generally “socialize.” Now, people from all over the world and from all professions use Facebook in order to share information, be heard, and make connections. Instead of verbally telling ten people they didn’t like a business, they are telling millions of people via Facebook. Instead of having one or two aeronautical engineering experts to consult with, there are now thousands of them at their fingertips.

For example, a Facebook page called “Interesting Engineering” has almost half a million followers. Figure 12-1 shows a screenshot of what the home page looks like. You can find this site by typing in the following URL in your browser:

www.facebook.com/interestingengineering

Interesting Engineering’s Facebook page says, “If engineering is a headache for you, join us. We will change the way you feel.”⁷ How cool is that? They are using Facebook to demystify engineering and target a younger audience.

As of this writing, the Facebook page in Figure 12-1 has 489,000 individual “likers,” and 337,060 people are talking about the content (a “liker” is an individual that has subscribed to the news posted on this Facebook page). This is an example of how Facebook creates a community of like-minded people who share an interest in engineering, opinions, and ideas. The people in this community can connect, share ideas, vent their frustrations, seek advice, talk about their successes, post project ideas, and discuss all kinds of engineering-related subjects.

252 Chapter 12 Engineering Your Online Reputation

Here is an example of how engineering students and professionals can harness the power of Facebook:

1. An engineering student is lurking around a classmate’s Facebook page and sees that her classmate has “liked” a page titled “Interesting Engineering.” She decides to click the live link and visit that page.
2. As she scrolls through the engineering-related articles and posts, she stumbles across an article that discusses the subject of her thesis, wind turbine grid development.
3. The student reads the article and scrolls through the reader comments posted. One of the participants, an engineering expert in the topic, has an unusual opinion about wind turbines. The student clicks on the expert’s name and immediately lands on the expert’s Facebook page.
4. The expert’s Facebook page has an About section that lists an email address, phone number, website, blog address, professional associations, education details, and current employer information. The student emails the expert to ask for a telephone interview in order to get some quotes for her thesis.
5. The expert writes back, agrees to the interview, and schedules it for two days hence.
6. Two days later, she gets her interview and obtains valuable information from a well-known engineering industry expert. It adds immeasurably to the content of her thesis.
7. The expert is so impressed with the passion and insight of the student, he offers her an internship that turns in to a full-time engineering position after she graduates.

In the above example, both the engineering student and the expert benefit from

the connection they made via Facebook. This type of collaborative connection and sharing happens every day on Facebook. Let us not forget that all of this interaction, conversation, learning, and community building happens all across the world, seven days a week, 24-hours per day—for free.

Using Facebook to Build Your Brand

You can use three methods to create your online presence (also referred to as your “brand”) and display information on Facebook. Luckily, Facebook provides step-by-step instructions to help you create profiles that can be customized to spotlight engineering professionals.

Note Remember that every friend made, page liked, photograph posted, group joined, event created, or comment left is a reflection of who we are or who we want the world to perceive us as being. If you are creating your social media presence to reflect your engineering business, choose your moves carefully. Visit the companion website to see step-by-step instructions for designing and implementing your customized Facebook page.

Beer c12.tex V3 - 03/04/2013 8:04 A.M. Page 253

Building a Facebook Page for a Business 253

The three ways to create a profile on Facebook that presents your engineering business are as follows:

1. Individual profile. This is referred to as the “human being” profile. It is for an individual person, not a business. Anyone with an email address can build one of these pages. An example of an individual Facebook page is shown below in Figure 12-2.
2. Fan page. This is also referred to as a “business page”: it could be for a product, service, organization, club, politician, or any other business-related entity. In order to create this page, you have to have an individual profile first. See Figures 12-3 and 12-4 for an example of a fan page for the engineering company, Structures, PE, LLP.

A Facebook fan page comes with some useful features for businesses. One feature is a “People” page. This allows businesses to create a page that shows off the expertise or specialization of their employees. Figure 12-4 shows an example of the engineers at Structures PE, LLP.

3. Individual fan page. This type of page is a hybrid. It is just like the “business page,” but it is used for an individual who is an engineering professional. In order to create this page, you have to have an individual profile first.

Building a Facebook Page for a Business 255

For example, an individual engineer may have two Facebook pages:

- One page for his or her private life. This individual page includes family, friends, hobbies, political views, music preferences, jokes, religious affiliations, and vacation photos. This page is fun, relaxed, family-oriented, personal, and private.
- The other page lists the person’s name as the business name, and it contains

professional and engineering-related information only. This fan page is created to promote the person's engineering expertise or specializations. This page contains no personal attributes that could be controversial such as political or religious views. This page is strictly a method of promoting one's engineering expertise on Facebook.

The advantage of creating a Facebook fan page is that you can see demographic data about the people visiting your page. You do this by analyzing Facebook traffic using a tool called "Insights." It enables you as the page owner to plan successful content and interactions. Again, Facebook provides all of this data free of charge to business (fan) pages. Visit the companion website to see instructions about how you can use the Insights data to make your Facebook fan page more attractive to readers. (See the Preface for the URL.)

The image shown in Figure 12-5 is an example of what one of the Insights pages looks like.

When creating and building your brand via a Facebook page, consider the following:

Want to live forever?

Wait until 2045.

Dmitry Itskov, a wealthy Russian, is creating "Avatar." First, he will transplant human brains into robots and then reverse-engineer the brain to effectively "download" human consciousness onto a computer chip. He estimates that by 2045 humans can buy immortality. For details, see the Preface for the URL.

- Will you create a personal page and a professional page?
- How can you spotlight your field of engineering?
- Can you visualize how you could use the commenting functions available on Facebook to gain credibility and become known as an expert in your engineering specialization? For example, when you comment on articles found on Interesting Engineering's Facebook page, you will be seen by half a million people.
- How will you make the design of your Facebook page look consistent with your blog, website and other social media platforms?
- Subscribe to me on Facebook: www.facebook.com/jillbrockmann for tips and

tricks about using Facebook pages to promote your personal brand online. Visit the companion website to see step-by-step instructions for designing and implementing your very own Facebook pages. (See the Preface for the URL.)

USING TWITTER TO CONNECT AND SHARE INFORMATION

If you have never heard of Twitter, then you have probably been living under another rock.

Here are some interesting facts about Twitter:

- Many engineering companies, large and small, now use Twitter to communicate with existing and potential customers. Also, many professional engineering publications post the latest news and links to their online articles on Twitter. 8

- Even though it is a young social media venue, it has 500 million registered users daily, and 33 billion tweets sent worldwide—daily. 9

- Anyone can read, write, share, or re-share messages about a field of interest, as long as the message is 140 characters or less.

Using Twitter to Connect and Share Information 257

- “Tweets,” or typed messages, are posted in real-time and can be read by anyone, from anywhere, regardless of whether they are logged in to their Twitter account.

- Twitter is fast becoming the “go to” medium for engineering information, according to Bosch Rexroth, cited below.

After launching a pilot project to study how engineers used social media, Kevin Gingerich from Bosch Rexroth (see Figure 12-6) stated, “We were astonished by the vibrancy of the engineering and industry communities on Twitter. It’s become our engine of choice for communicating to a broad audience, from recent innovations and upcoming exhibitions to new technical references on our website.” 10

Using Twitter to Connect with Other Engineers

Why should you or your business join those who swear by Twitter for connecting to others in the engineering field? Here are a few reasons:

- If you are interested in spreading the word about your own engineering expertise or the specialty of your company, why would you ignore a virtual database of opinions, trends, messages, stories, and networking opportunities?

- In the engineering context, Twitter is an environment that is rich with ideas, conversations, and content from influential industry leaders. Don’t forget that Figure 12-6 Twitter account home page for Bosch Rexroth Corporation.

all of this sharing, communicating, and brand-building activity is available 365 days a year, 24 hours per day—for free.

Figure 12-6 is an image of a successful engineering home page on Twitter.

Businesses can use Twitter # (hashtags) to corral participants at a company-sponsored event, for curating crowd-sourced data about product research, and for connecting directly with engineering clients and customers. More information about the importance of hashtags and crowd-sourcing data can be found on the companion

website. See the Preface for the URL.

- Engineering professionals can use Twitter to funnel traffic to special events, online design contests, interactive websites, new blog entries, product launches, and other information-rich connections with consumers.
- Individual engineers can use Twitter to foster strong networking relationships with other engineers by listening and gathering industry intelligence about competition, market trends, and employment opportunities.

Imagine you are a graduating engineering student; here's how you can use Twitter:

1. You are about to graduate from a small college with a mechanical engineering degree and have arrived at the International Manufacturing Technology Show (IMTS) 2012 in Chicago. You are to visit the booth of the internationally known company that paid for your flight, hotel, and admission to this event. You have been told that it is located in Booth #10602. Only, they are not actually at that location. No other information is available. Hmm. What to do?
 2. Enormous Engineering Company (EEC), the company that paid for your dream trip, had to move its booth to a different building because of mechanical "issues" with Booth #10602. EEC is worried that attendees will not be aware of its last-minute location change. The company tweets immediately about its new building location at IMTS.
 3. You are following EEC on Twitter. You quickly scroll through your tweet feed to see if there is any word from them. Bingo! They have moved to a different building three blocks away.
 4. You inspire and amaze EEC's booth members by arriving early to express your hearty thanks for the great trip, and you make sure that their mechanical issue is fixed at the new location. They are grateful for your arrival at the new location and glad that Twitter helped route you to the new location.
 5. Upon returning home from your trip you find a letter from the president of EEC, thanking you for your help with the booth and inviting you to dinner to talk about your plans for after graduation.
- In the above example, Twitter moved mountains for you and EEC. When a company invests thousands of dollars setting up plans for an enormous event like IMTS, it can be derailed quickly by a sudden event like changing a booth location. Since Twitter is known for instantaneous communication, it is a perfect platform for this occurrence. EEC could have missed a few thousand booth visitors, and you may not have found them to say "thank you" for your trip. You would have missed the free dinner invitation, too.

Customizing Your Twitter Account

When creating the account for you or your engineering organization on Twitter, consider the following:

- Make sure others can find you easily on Twitter. Customize your Twitter user name, profile photo and design, bio, and online appearance by maintaining brand consistency with colors, images, and logos. Use keywords in your bio to help people find you.
- Don't worry about how many followers you have. Instead, concentrate on following engineering industry leaders, cutting-edge companies, and experts in engineering. Read their tweets, place comments, re-tweet them, and actively

seek information that will bring you new information and ideas. Your own followers will come eventually.

- Use customized searches and hashtags to filter out everything except the information you need.
- Attach hashtags to photos or videos you upload so they are easily found in searches. Remember to use authentic keywords whenever possible.
- To find people, companies or engineering organizations to follow, use Twellow.com and WeFollow.com directories on Twitter that are categorized by interest and industry.

Does adding sound to cars increase safety?

Engineers have developed a vehicle warning system that improves safety for bicyclists. The system consists of a GPS-enabled device mounted to the dashboard of an electric car (which are dangerously quiet). It warns bicyclists of the approach of a quiet car.

GENERATING YOUR INTERACTIVE RÉSUMÉ ON LINKEDIN

In a recent Wall Street Journal article titled “No More Résumés,” Rachel Emma Silverman stated that “Instead of asking for résumés, a New York venture-capital firm—which has invested in Twitter—asked applicants to send links representing their ‘Web presence.’ ” 11 What? No résumé?

260 Chapter 12 Engineering Your Online Reputation

Tech-savvy employers are acquiring evidence of people’s web reputation and searching for their online interactions as a means of finding better-quality candidates—especially for engineering companies or organizations that rely heavily in the Internet and social media to build their brand, enhance employee collaboration, and reach their customer base.

Increasing Visibility for Engineers

When it comes to actively participating in various social media platforms, the Society

of Automotive Engineers International (SAEI) has determined that “engineers are apparently just a shipastherestofus.” SAEI has drawn this conclusion after completing a survey that revealed 61 % of engineers polled use social media sites like Facebook, LinkedIn, Twitter, and YouTube. 12

LinkedIn is the perfect place to increase online visibility, showcase your engineering expertise, and network with other professionals in your field. Even though LinkedIn is considered a “social” media site, the purpose of creating and maintaining a profile on this platform is solely for professional networking, connecting, and building career-oriented associations.

Figure 12-7 shows a typical LinkedIn profile of engineer, author, and speaker Anthony Fasano, PE, LEED, AP.

Completing your LinkedIn profile can be time-consuming, but the benefits are enormous. The tools provided allow space to include all phases of your professional life including your work experience, education, business associations, personal and company websites, other social media accounts, volunteer activities, areas of special expertise using keywords, and other ways to enhance your professional message to other LinkedIn members.

Creating your LinkedIn Profile

When creating your profile on LinkedIn, consider the following:

- Complete your entire profile. A sparsely completed profile is almost as bad as having no profile at all. Your profile should be compelling, interesting, accurate, and complete. Include as much engineering-related information as possible.

Remember to use keywords.

- Actively participate in LinkedIn Answers. The answers feature helps nurture professional engineering connections and gives you a chance to show your expertise by answering questions posed by others. Participate by posing questions yourself, too.
- Join groups. Find groups related to the engineering profession, join them, and actively participate in ongoing conversations to get your name seen in the forums. If there are not any groups about your specific area of engineering, create one!

- Use Advanced Search. The basic search function is great, but Advanced Search has all sorts of ways to fine-tune your results, including engineering keywords and product names in all your posts.
- Treat your LinkedIn profile similar to a website. Make sure your profile is up-to-date, organized, well-formatted and contains lots of interesting engineering-related information. It goes without saying that misspellings are a no-no!
- Populate your profile with keywords. Use keywords that reflect your background, education, professional field, or expertise. Use variations of those words, too: for example, use engineer, engineering, engineered.
- Increase the chances you will be found with search engines. Make sure that

your profile is marked as “public” so that you will show up in searches for your profession.

262 Chapter 12 Engineering Your Online Reputation

Giving and Receiving Recommendations

One of the best features offered to LinkedIn members is the Recommendation section.

This is a profile portion designed to highlight your achievements and the exceptional work of other LinkedIn members.

You may politely ask an engineering colleague for a recommendation for any collaborative work you performed. You may receive a request for a recommendation from another LinkedIn member.

First algae-powered car?

The world's first algae fuel-powered vehicle, dubbed the Algaeus, was revealed in San Francisco.

The plug-in hybrid car, which is a Prius equipped with a nickel metal hydride battery, runs on green algae.

For details, see the Preface for the URL.

People in charge of making hiring decisions commonly review LinkedIn profile pages. It is important that you request recommendations that are relevant to your engineering specialty. Make the most of the section by requesting recommendations from colleagues you have collaborated with and by giving accurate and detailed recommendations to those colleagues you feel should be spotlighted. Figure 12-8 shows an example of the engineering recommendations section on the home page of an engineer's LinkedIn profile.

Visit the companion website to see step-by-step instructions for designing and implementing your very own LinkedIn account. (See the Preface for the URL.)

TARGETING EXPERTS WITH GOOGLE+

Have you ever heard the word “google” used as a verb? Usually people say, “Google it!” That is probably because Google is the largest search engine on the Internet.

Wouldn't it be terrific if your engineering business came up at the top of the list when someone searched, “expert chemical engineer”?

Google+, Google Plus or just g+, is the brain-child of Google, Inc. Google is not just a search engine. It has developed many collaboration-based applications that are widely used throughout the engineering field. In an attempt to gather all of these cutting-edge applications into one place, Google engineers created Google+. This platform integrates many of Google's products to create a broader social experience. The result is a platform for professionals who want to increase their online visibility and personal brand identity.

Creating Your Google+ Profile Page

If you do not have a Google+ account yet, it is easy to create. Type the following text in your browser: <http://plus.google.com>

Google+ has an intuitive user interface that walks you through creating your profile in minutes. Visit the companion website to see step-by-step instructions for designing and customizing your own Google+ account. (See the Preface for the URL.)

Circling Engineering Experts

The main functions of Google+ are bundled to include a search engine, an email client, an Internet browser, friend streams, circles of specialized contacts, group video chats with a new feature called Hangouts, personalized and automated search functions, the ability to target engineering industry experts, and the community-building feature called Circles.

The Circles feature of Google+, at first glance, may look the same as “friending” people on Facebook. However, Circles is a much more intricate way to organize lists (circles) of engineering industry experts, colleagues, and friends. The streamlining of these circles of contacts allows you to create entirely separate groups (circles) for family, friends, college alumni, colleagues, civil engineering experts, aeronautic engineers, mechanical engineers, sports fans, and more.

The main point to remember about Google+ Circles is that it allows you to read what you want, share what you want, share it when you want, and share it with whom you want. It also allows you to filter out the noise from everyone in your circles and drill down to reading only the content posted by the engineering experts you choose. This ability to focus on a specific topic is a huge time saver. For example, if you want to read about new developments in wind turbine grid engineering, you simply click the circle (that you created and filled with experts) named “wind turbine experts” and scroll through the posts of those experts.

Figure 12-10 shows an example of a Google+ Circles page.

Creating, adding, deleting, and modifying your Circles is as easy as a click or two.

You can also invite people who are in your circles to participate in a live online session called a “Hangout.” These hangouts can be recorded and replayed via YouTube.com.

This function enables you to conduct online meetings with others. There is no more flying to meetings. You can sit in your home office in your pajamas! You can join other Hangouts as an active participant or simply observe and listen.

Maximizing Your Online Visibility

A useful feature of using Google+ in an engineering business is that your Google+ page content is part of Google’s web search integration and the ability for consumers to “direct connect” to your page. Through this connection ability, consumers or clients are directed to your website or other online venues, such as your blog.

a societal makeover, has repeatedly admonished Congress that “[i]f [it] won’t act soon to protect future generations, I will!”—that is, if Congress will not genuflect to his demands, and pass laws to his liking, he will act on his own.⁴ And the president has made good on his refrain. On a growing list of matters, he has, in fact, displayed an impressive aptitude for imperial rule. With the help of a phalanx of policy “czars,” from immigration, the environment, and labor law to health care, welfare, and energy, the president has exercised his executive “discretion” to create new law, abrogate existing law, and generally contrive ways to exploit legal ambiguities as a means to his ends. He has also declared the Senate in recess when it was not, thereby bypassing the Senate’s constitutional “advice and consent” role to install several partisans in top federal posts. Today this is glorified and glamorized as compassionate progressivism. The Framers called it despotism. In Federalist 48, James T H E LIBERT Y A ME NDME NTS 5 Madison, considered the father of the Constitution, wrote, “An ELECTIVE DESPOTISM was not the government we fought for; but one which should not only be founded on free principles, but in which the powers of government should be so divided and balanced among several bodies of magistracy, as that no one could transcend their legal limits, without being effectually checked and restrained by the others.” 5 The third branch of the federal triarchy, the judiciary, is no better. Among the biggest myths is that the men and women of the judiciary, operating under monklike conditions, would dutifully and faithfully focus their undivided mental faculties toward preserving the Constitution. They would apply their expertise, experience, and insight free from the political pressures and biases of elections and the legislative and executive branches of government, and within a narrow scope of authority and purpose. Moreover, it was assumed there was little to fear from this part of government. In Federalist 78, Alexander Hamilton explained, “Whoever attentively considers the different departments of power must perceive, that, in a government in which they are separated from each other, the judiciary, from the nature of its functions, will always be the least dangerous to the political rights of the Constitution; because it will be least in a capacity to annoy or injure them.” 6 Yet, having seized for itself in the early years of the nation the final word on all matters before it, the Supreme Court with just five of its nine members can impose the most far-reaching and breathtaking rulings on the whole of society, for which there is no effective recourse. It turns out that justices are also God’s children; and being of this world, their makeup consists of actual flesh and blood. They are no more noble or virtuous than the rest of us, and in some M A R K R. LEVIN 6 cases less so, as they suffer from the usual human imperfections and frailties. And the Court’s history proves it. In addition to delivering the routine and, in some cases, exceptional rulings, the Court is responsible for several notorious holdings, including *Dred Scott v. Sandford* 7 (endorsing slavery), *Plessy v. Ferguson* 8 (affirming segregation), and *Korematsu v. United States* 9 (upholding the internment of Americans), among others. During the last eighty years or so, the justices have rewritten sections of the Constitution, including the Commerce Clause (redefining noncommerce as commerce) and the tax provisions (redefining penalties as taxes), to accommodate the vast expansion of the federal government’s micromanagement over private economic activity. Moreover, the justices have laced the Court’s jurisprudence with all manner of personal policy preferences relating to social, cultural, and religious issues, many of which could have been avoided or deferred. What was to be a relatively innocuous federal government, operating from a defined enumeration of specific grants of power, has become an ever-present and unaccountable force. It is the nation’s largest creditor, debtor, lender, employer, consumer, contractor, grantor, property owner, tenant, insurer, health-care provider, and pension guarantor. Moreover, with aggrandized police powers, what it does not control directly it bans or mandates by regulation. For example, the federal government regulates most things in your bathroom, laundry room, and kitchen, as well as the mortgage you hold on your house. It designs your automobile and dictates the kind of fuel it uses. It regulates your baby’s toys, crib, and stroller; plans your children’s school curriculum and lunch menu; and administers their student loans in college. At your place of employment, the federal government oversees everything from the racial, gender, and age diversity of the workforce to the hours, wages, and benefits paid. Indeed, the question is not what the federal government regulates, but what it does not. And it makes you wonder—how can a people incapable of selecting their own lightbulbs and toilets possess enough competence to vote for their own rulers and fill out complicated tax returns? The illimitable regulatory activity, with which the federal government torments, harasses, and coerces the individual’s private and economic behavior, is the progeny of a colossal federal edifice with inexhaustible energy for societal manipulation and change. In order to satisfy its gluttonous appetite for programmatic schemes, the federal government not only hurriedly digests the Treasury’s annual revenue, funded with confiscatory taxes on a diminishing number of productive citizens, but desserts on the wealth not yet created by generations not yet born with unconstrained indebtedness. And what havoc has

this wrought. The federal government consumes nearly 25 percent of all goods and services produced each year by the American people.¹⁰ Yearly deficits routinely exceed \$1 trillion.¹¹ The federal government has incurred a fiscal operating debt of more than \$17 trillion, far exceeding the total value of the annual economic wealth created by the American people, which is expected to reach about \$26 trillion in a decade.¹² It has accumulated unfunded liabilities for entitlement programs exceeding \$90 trillion, which is growing at \$4.6–6.9 trillion a year.¹³ There is not enough money on the planet to make good on the federal government's financial obligations. Hence, the Federal Reserve Board has swung into action with multiple versions of "quantitative easing," which is nothing more than the federal government monetizing its own debt—or buying its own debt—*MARK R. LEVIN* 8 with a combination of borrowing, issuing itself credit, and printing money amounting to trillions of dollars.¹⁴ Of course, this has the eventual effect of devaluing the currency, fueling significant inflation or deflation, and destabilizing the economy at some future point. But like the laws of physics, there is no escaping the laws of economics. As these fiscal and monetary malpractices escalate, for there is no end in sight, the federal government will turn increasingly reckless and demanding, taking an even harder line against the individual's accumulation of wealth and retention of private property. For example, when the federal income tax was instituted one hundred years ago, the top individual income tax rate was 7 percent. Today the top rate is about 40 percent, with proposals to push it to nearly 50 percent. There is also serious talk from the governing elite about instituting a national value-added tax (VAT) on top of existing federal taxes,¹⁵ which is a form of sales tax, and divesting citizens of their 401(k) private pension plans.¹⁶ Even the rapaciousness of these policies will not be enough to fend off the severe and widespread misery unleashed from years of profligacy. Smaller nations such as Cyprus, Spain, and Greece provide a window into the future, as their borrowing has reached its limit. Moreover, unable to print money, their day of reckoning is either looming or arrived. Therefore, bank accounts, other investments, and wealth generally are subject to governmental impoundment, sequester, and theft. The individual's liberty, inextricably linked to his private property, is submerged in the quicksand of a government that is aggregating authority and imploding simultaneously. What, then, is the answer? Again, Tocqueville offers guidance. Looking back at the Constitutional Convention some fifty years afterward, he observed that "it is new in history of society to see *THE LIBERTY AND DEMOCRACY* 9 a great people turn a calm and scrutinizing eye upon itself when apprised by the legislature that the wheels of its government are stopped, to see it carefully examine the extent of the evil, and patiently wait two whole years until a remedy is discovered, to which it voluntarily submitted without its costing a tear or a drop of blood from mankind." ¹⁷ It is asking too much of today's governing masterminds and their fanatical adherents to reform the product of their own fatuity—that is, the continuing disassembly of the Constitution and society. After all, despite one credible source after another, both within and outside the federal government, ringing alarm bells about the nation's hazardous track—describing it as unsustainable, desperate, and immoral—they are blinded to reason, experience, and knowledge by their political DNA and ideological invincibility and therefore are intransigent to effective ameliorative steps. They long ago renounced by word and action their adherence to the Constitution's confinements since the Statists' utopia and the Framers' Constitution cannot coexist. However, it is not asking too much of "a great people [to] turn a calm and scrutinizing eye upon itself" and rally to their own salvation. It is time to return to self-government, where the people are sovereign and not subjects and can reclaim some control over their future rather than accept as inevitable a dismal fate. Unlike the radicalism of the governing masterminds, who self-servingly oversee a century-old, perpetual counterrevolution against the American dawn, the people must have as their goal the reestablishment of the founding principles and the restoration of constitutional republicanism, thereby nurturing the individual and preserving the civil society. This requires, first, an acknowledgment of the federal government's unmooring from its *MARK R. LEVIN* 10 constitutional foundation; second, an acceptance that the condition is urgent and, if untreated, will ultimately be the death knell of the American Republic; third, the wisdom to rebalance the government in a way that is without novelty and true to the Framers' original purpose; and, fourth, the courage to confront—intellectually and politically—the Statists' stubborn grip on power. There is a path forward but it requires an enlightened look back at our founding. And what we find is that the Framers rightly insisted on preserving the prominent governing role of the state legislatures as a crucial mechanism to containing the power of the proposed new federal government. In fact, other than the limited, specified powers granted to the federal government, the states retained for themselves plenary governing authority. The debates during the Constitutional Convention and the state ratification conventions are unequivocal in this regard. During the ratification period, the Federalists repeatedly assured the Anti-Federalists and other skeptics of the proposed federal government's limits.

For example, Madison argued in Federalist 14, “In the first place, it is to be remembered, that the general government is not to be charged with the whole power of making and administering laws: its jurisdiction is limited to certain enumerated objects, which concern all the members of the republic, but which are not to be attained by the separate provisions of any.”¹⁸ In Federalist 45 he insisted, “The powers delegated by the proposed Constitution to the federal government are few and defined. Those which are to remain in the State governments are numerous and indefinite.”¹⁹ In Federalist 46, Madison asserted that “the powers proposed to be lodged in the federal government are as little formidable to those reserved to the individual States, as they are indispensably necessary to accomplish the purposes of the Union; and that all *THE LIBERTY AND INDIVIDUAL RIGHTS* 11 those alarms which have been sounded, of a meditated and consequential annihilation of the State governments, must, on the most favorable interpretation, be ascribed to the chimerical fears of the authors of them.”²⁰ Madison’s declarations were not unique among the Constitution’s proponents but rather were commonplace. And without these assurances—and the additional pledge that the First Congress would offer amendments to the Constitution further ensuring that individual and state sovereignty would be safeguarded against the new federal government (what became the Bill of Rights, including the Ninth and Tenth Amendments)—the Constitution would not have been ratified. Thus, the Constitution, drafted by delegates who were sent by the states to Philadelphia in 1787 and ratified subsequently by delegates in the state conventions, preserved the decisive role of the states in the American Republic. It requires emphasis that the states established the American Republic and, through the Constitution, retained for themselves significant authority to ensure the republic’s durability. This is not to say that the states are perfect governing institutions. Many are no more respectful of unalienable rights than is the federal government. But the issue is how best to preserve the civil society in a world of imperfect people and institutions. The answer, the Framers concluded, is to diversify authority with a combination of governing checks, balances, and divisions, intended to prevent the concentration of unbridled power in the hands of a relative few imperfect people. Unlike the modern Statist, who defies, ignores, or rewrites the Constitution for the purpose of evasion, I propose that we, the *MARK R. LEVIN* 12 people, take a closer look at the Constitution for our preservation. The Constitution itself provides the means for restoring self-government and averting societal catastrophe (or, in the case of societal collapse, resurrecting the civil society) in Article V. Article V sets forth the two processes for amending the Constitution, the second of which I have emphasized in italics: The Congress, whenever two thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as Part of this Constitution, when ratified by the Legislatures of three fourths of the several States or by Conventions in three fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress . . .²¹ Importantly, in neither case does the Article V amendment process provide for a constitutional convention. It provides for two methods of amending the Constitution. The first method, where two-thirds of Congress passes a proposed amendment and then forwards it to the state legislatures for possible ratification by three-fourths of the states, has occurred on twenty-seven occasions. The second method, involving the direct application of two-thirds of the state legislatures for a Convention for proposing Amendments, which would thereafter also require a three-fourths ratification vote by the states, has been tried in the past but without success. Today it sits dormant. The fact is that Article V expressly grants state legislatures *THE LIBERTY AND INDIVIDUAL RIGHTS* 13 significant authority to rebalance the constitutional structure for the purpose of restoring our founding principles should the federal government shed its limitations, abandon its original purpose, and grow too powerful, as many delegates in Philadelphia and the state conventions had worried it might. The idea was first presented at the Constitutional Convention on May 29, 1787, by Edmund Randolph, governor of Virginia, as a proposal in the so-called Virginia Plan drafted by Madison. Resd. that provision ought to be made for the amendment of the Articles of Union whensoever it shall seem necessary, and that the assent of the National Legislature ought not be required thereto.²² On June 11, George Mason of Virginia—who had earlier drafted Virginia’s Declaration of Rights, the precursor to the Declaration of Independence—responded to some of the delegates who did not see the necessity of the proposal, by strongly advocating for it. Col: Mason urged the necessity of such a provision. The plan now to be formed will certainly be defective, as the Confederation has been found on trial to be. Amendments therefore will be necessary, and it will be better to provide for them, in any easy, regular and Constitutional way than to trust to chance and violence. It would be improper to require the consent of the Natl Legislature, because they may abuse their power, and refuse their consent on that very account. . . .²³ *MARK R. LEVIN* 14 Later, when the delegates

returned to the issue, Roger Sherman of Connecticut—who had been a member of the Committee of Five, which helped draft the Declaration of Independence, and who coauthored the so-called Connecticut Plan, which served as the basis for our bicameral Congress—offered an alternative in which Congress would propose amendments and the states would ratify them. Madison suggested dropping the state convention altogether. On September 15, Mason, alarmed that Congress would have the sole power to propose amendments, continued to insist on state authority to call for conventions. Mason explained that an oppressive Congress would never agree to propose amendments curtailing its own tyranny: Col: Mason thought the plan of amending the Constitution exceptionable & dangerous. As the proposing of amendments is in both the modes to depend, in the first immediately, and in the second, ultimately, on Congress, no amendments of the proper kind would ever be obtained by the people, if the Government should become oppressive, as he verily believed would be the case.²⁴ Mr. [Gouverneur] Morris [of Pennsylvania] & Mr. [Elbridge] Gerry [of Massachusetts] moved to amend the article so as to require a Convention on application of 2/3 of the Sts [states].²⁵ Earlier, Pennsylvania's James Wilson, among the most active participants at the Constitutional Convention, had "moved to insert 'three fourths of' before the words 'several States,' " which was adopted and then ultimately added as a requirement for both THE LIBERTY AMENDMENT processes under Article V.²⁶ Consequently, under both amendment procedures, the Constitution requires that three-fourths of the states ratify amendments, either by their state legislatures or state conventions. I was originally skeptical of amending the Constitution by the state convention process. I fretted it could turn into a runaway caucus. As an ardent defender of the Constitution who reveres the brilliance of the Framers, I assumed this would play disastrously into the hands of the Statists. However, today I am a confident and enthusiastic advocate for the process. The text of Article V makes clear that there is a serious check in place. Whether the product of Congress or a convention, a proposed amendment has no effect at all unless "ratified by the Legislatures of three fourths of the several States or by Conventions in three fourths thereof. . . ." This should extinguish anxiety that the state convention process could hijack the Constitution. After more research and reflection, the issue crystallized further. If the Framers were alarmed that states calling for a Convention for proposing Amendments could undo the entire undertaking of the Constitutional Convention, then why did they craft, adopt, and endorse the language? In Federalist 43, Madison considered both Article V amendment processes equally prudent and judicious. He wrote, in part, "That useful alterations will be suggested by experience, could not but be foreseen. It was requisite, therefore, that a mode for introducing them should be provided. The mode preferred by the convention seems to be stamped with every mark of propriety. It guards equally against that extreme facility, which would render the Constitution too mutable; and that extreme difficulty, which might perpetuate its discovered faults. It, moreover, equally enables the general and the State governments TO MAKE A R K R. LEVIN 16 to originate the amendment of errors, as they may be pointed out by the experience on one side, or on the other. . . ." ²⁷ There are other reasons for assuaging concerns. Robert G. Natelson, a former professor of law at the University of Montana and an expert on the state convention process, explains that "a convention for proposing amendments is a federal convention; it is a creature of the states or, more specifically, of the state legislatures. And it is a limited-purpose convention. It is not designed to set up an entirely new constitution or a new form of government. How do we know that it's a federal convention? [It] was the only kind of interstate convention the Founders ever knew, or likely ever considered. Indeed, when they talked during the ratification process about conventions for proposing amendments, they always talked about them as representing the states." ²⁸ Moreover, the state legislatures determine if they want to make application for a convention; the method for selecting their delegates; and the subject matter of the convention.²⁹ In addition, Congress's role in the state application process is minimal and ministerial. It could not be otherwise, as the Framers and ratifiers adopted the state convention process for the purpose of establishing an alternative to the congressionally initiated amendment process. It provided a constitutional solution should "the [federal] Government . . . become oppressive." ³⁰ The text and plain meaning of Article V are inarguable. In Federalist 85, Alexander Hamilton—a leading advocate of a robust federal government—explained that "the national rulers, whenever nine [two-thirds] States concur, will have no option upon the subject. By the fifth article of the plan, the Congress will be obliged 'on the application of the legislatures of two thirds of the States [which at present amount to nine], to call a convention for proposing THE LIBERTY AMENDMENT 17 amendments, which shall be valid, to all intents and purposes, as part of the Constitution, when ratified by the legislatures of three fourths of the States, or by conventions in three fourths thereof.' The words of this article are peremptory. The Congress 'shall call a convention.' Nothing in this particular is left to the discretion of that body. And of consequence, all the

declamation about the disinclination to a change vanishes in air.” 31 I have no illusions about the political difficulty in rallying support for amending the Constitution by this process. After all, all past efforts have fallen short. And the governing masterminds and their disciples are more powerful and strident than ever. There is no doubt that their resistance will be stubborn and their tactics desperate as they unleash the instrumentalities of the federal government and the outlets of a corroboratory media to vanquish such a movement and subdue the public. Having rejected the Constitution’s limits, they will not be persuaded by references to its text and history. Their evasion has been their design. Others who self-identify as originalists, constitutionalists, and conservatives in asserting allegiance to the Constitution, as I do, might nonetheless be wary of or opposed reflexively to the state convention process for several reasons, including their unfamiliarity with its history and workings. Perhaps, in time, their high regard for the Constitution will persuade them of the judiciousness in resorting to it before there is little left of it. Still more may be resigned to a grim future, preferring lamentation to the hard work of purposeful action. And, of course, there are always the unmindful and content. Whatever the reasons, there are also untold numbers of citizens who comprehend the perilousness of the times and circumstances, and the urgency of drawing the nation’s attention to the MARK R. LEVIN restoration of constitutional republicanism. This book is an appeal to them. The Framers anticipated this day might arrive, for they knew that republics deteriorate at first from within. They provided a lawful and civil way to repair what has transpired. We, the people, through our state legislatures—and the state legislatures, acting collectively—have enormous power to constrain the federal government, reestablish self-government, and secure individual sovereignty. What follows are proposed amendments to the Constitution—The Liberty Amendments. It is my hope and aspiration for our country that these amendments can spur interest in and, ultimately, support for the state convention process. In any event, should there come a time, sooner or later, when the states convene a convention, these amendments or amendments of the same nature—as I make no claim of unassailable knowledge—may prove useful and find their way into the debate. But a plan is what is needed, as is a first step. This is mine.

Xbox One’s sinking ship (2013-07-18 23:53)

In a surprising move, Microsoft has posted a news discharge feature most (but not all) of the particulars about the Xbox One’s most notorious features. Here is the main stop working (read about it straight from their lips here):

- The Xbox One will require an association to the internet every 24 hours to have fun with games. Blu-Ray and TV is not affected by this. If you’re playing games on your report but on a friend’s Xbox One, it must connect to the internet every hour.
- You can give games to a friend without a fee, but there are conditions: 1) You can only share a game once; 2) They enclose to be on your friend’s list at least 30 days prior. It appears that once you give the game away, though, you might not be able to get it back.
- You can go halves ALL of your games with up to 10 relatives members from ANY Xbox One for free.
- Kinect has widespread privacy controls. You can disable it almost totally, and you can control how much in turn it contribute to beyond what’s stored on your Xbox One.
- Publishers will organize which merchant can buy and sell used games. Microsoft provided the publishers with the skill to organize this, and will not see any profit from these deals and sales.

National Republican Senatorial Committee letter (2013-07-19 00:01)

Senator Jerry Moran
Chairman

NATIONAL REPUBLICAN SENATORIAL COMMITTEE
425 SECOND STREET, NE • WASHINGTON, DC 20002

Dear _____

Control of the Senate is shaping up to be a "photo finish" for the ages. There is simply NO margin for error, and here's how you can help:

- 1. Please carefully double check the **NRSC's Voter Verification Form** I've enclosed, make any changes right on your form and rush it back today so I know for sure that I can reach you at once with breaking campaign updates and the latest on the Benghazi, IRS and Associated Press scandals.*
- 2. Make the difference in keeping Republicans on offense until the last vote is cast. You can help fire Harry Reid AND turn Barack Obama into a lame duck all in one night by making another early Victory Gift of \$50 or \$100 (if at all possible today).*

As a key supporter of the NRSC – our Party's ONLY national committee dedicated to winning a Republican Senate Majority – your support is deeply appreciated. Robert, the challenge we face today is balancing the potential for achieving another Republican wave year like 2010 against the reality of no margin for error in taking back the Senate. That's why I am kicking every last fire in advance to make sure I can reliably contact you at a moment's notice by updating and returning your Voter Verification Form.

Our path to victory counts on smarter than ever voter turnout efforts like this AND communicating our positive message of "YES" to Republican, Independent and even Democrat voters who want lower taxes, a balanced budget and Washington off their backs.

Taking Alaska, Arkansas, Louisiana, Montana, South Dakota, and West Virginia – six states Democrats will be defending in 2014 where Obama got less than 42% of the vote – back from Harry Reid rests on using every possible day to connect the dots for voters of the better outcome for everyone's children that comes with balancing the books and tightening Washington's belt instead of yours.

These six are among more than a dozen down-to-the-wire battlegrounds and – with the Obama war room still open for business back in Chicago and targeting Republicans for defeat – your additional early support can make the difference in Harry Reid raising taxes or sending him to join Nancy Pelosi on the political back benches.

If we fail, the Democrats will make us pay, and 7.6% unemployment, ObamaCare, \$4 gas and \$12 trillion in debt will soon seem like the good old days. Think about that for a moment.

By standing FOR class warfare that discriminates against individual success and standing AGAINST our free market vision of lower taxes, less spending and balanced budgets -- Harry Reid, Barack Obama and Joe Biden are working 24/7 to permanently shut the door on free market capitalism in America.

(Over, please...)

That's why Obama is hauling back record amounts of campaign cash to defeat conservatives in Senate battlegrounds, and that's why the **NRSC's Voter Verification Form** and your **Victory Gift** of \$50 or \$100 are the keys to winning over voters in state after state.

As always, YOU are the Party and your gifts drive our efforts to tell every possible voter that we know Washington is broken and that by electing a Republican Senate Majority we offer the better path to a fair shot at prosperity:

- ✓ **It's all about Jobs, Jobs, Jobs:** Obama and Reid will never accept that they cannot tax and spend us out of this ruin wreck of an economy. They will NEVER agree to stop kicking the can, pay down debt and let the proven power of free markets take us back to jobs and prosperity. In fact, Harry Reid just showed his colors again by passing his first budget through the Senate in 4 years — a budget that raises taxes by \$1 Trillion dollars and it still doesn't balance!!
- ✓ **To STOP Washington from picking your pocket for MORE programs we don't need and can't afford, the NRSC is counting on your help:** Thank you in advance for taking this moment to finally help fire Harry Reid by returning your **NRSC Voter Verification Form** and, if possible, a **Victory Gift** of \$50 or \$100 to win six more seats today.

my team and I are in non-stop contact with each of our targeted Senate campaigns, and we are getting out ground breaking voter strategies that put everything in the field from social media to shoe leather because winning the ground game is the key to winning on Election Night.

Please know that the NRSC is counting on you more than ever as the trio of Reid, Obama and Biden are fighting for their political lives and will stop at NOTHING to hang onto power.

Sincerely,

 Sen. Jerry Moran
 NRSC Chairman

P.S. I urgently need you to double check, complete and return the **NRSC's Voter Verification Form**. Taking our positive message of "YES" to lower taxes and balanced budgets into all 35 campaign counts on you rushing back your **NRSC Voter Verification Form** along with your **Victory Gift** of \$50 or \$100 today. It's a foregone conclusion that Barack Obama's Democrats will outspend us, but they don't have your vote and your support which are the keys to winning. That's why I am making sure that I can reach you at a moment's notice with campaign updates and breaking news. Thank you for all you are doing! -- Jerry

Xbox One has 2160p HDMI interface (2013-07-20 21:13)

The Xbox One is an upcoming video game console from Microsoft. Announced on May 21, 2013, it is the successor to the Xbox 360 and the third console in the Xbox family of consoles. The Xbox One is scheduled for release across North America, several European markets, Australia and New Zealand on November 22 2013, with later release in Japan and the remaining European markets in 2014. It will directly compete with Sony's PlayStation 4 and Nintendo's Wii U as part of the eighth generation of video game consoles. Microsoft and various publications have classified the device as an "all-in-one entertainment system," making it a competitor to other home media devices such as the Apple TV and the Google TV platform.

Moving away from the PowerPC based architecture used in the Xbox 360, the console features an AMD processor built around the x86-64 instruction set. The console places an increasing emphasis on entertainment and integration with the Kinect peripheral, offering the ability to use an existing set-top box to watch live television programming (augmented by an enhanced program guide with support for voice commands), a built-in Skype client, and improved second screen support. The console also provides new functionality for use in games, such as an expanded Xbox Live service, improved Kinect functionality, cloud computing, the ability to automatically record and share video highlights from gameplay, and integrated support for live streaming gameplay online.

The console's initial policies surrounding online connectivity requirements, mandatory integration with Kinect, and ambiguous restrictions on the resale and sharing of used games led to mixed reviews and concerns after the console's reveal. In response to these criticisms, Microsoft announced they would be dropping all of the originally planned digital rights management and internet connection requirements, and the mandatory use of Kinect.

History

Xbox One at E3 2013

The Xbox One is a successor to Microsoft's previous console, the Xbox 360. The Xbox 360 was introduced in 2005 as part of the seventh generation of video game consoles, and as of June 2013, remains in production by Microsoft through after a number of small hardware revisions to reduce the unit's size and improve its reliability. In 2010, Microsoft's Chris Lewis stated that the 360 was about "halfway" through its lifecycle; this was aided by the introduction of the Kinect device that year which Lewis stated would extend the lifecycle by five years.

Initial hardware for the 360's successor, commonly referred to by the industry as the "Xbox 720", was reportedly in hands of developers as early as May 2011. The official developer kit was codenamed Durango,[23] and appeared to be available to developers by mid-2012.[24] Leaked documents suggested that the new console would include an improved Kinect device, cloud access to games and media, integration with phone and tablet devices, and technology to provide players heads-up displays on glasses worn by the player, codenamed "Fortaleza"; Microsoft did not comment on these reported features. Similar, leaked design documents also suggested that Microsoft was seeking to eliminate the ability to play used games, though Microsoft later clarified they were still reviewing the design and were "thinking about what is next and how we can push the boundaries of technology like we did with Kinect", but did not comment on the validity of the information.

The console, now known as the Xbox One, was publicly unveiled on May 21, 2013 in a press conference designed to cover the unit's broad multimedia and social capabilities. A second press event for the console was held during E3 on June 10, 2013, focusing on its video game-oriented functionality. At that time, Microsoft announced that the console would release in 21 different markets at launch, but this was later amended down to 13. The change, which pushed the release date for the other 8 markets to 2014, was attributed to unforeseen complexity in localizing the new Kinect peripheral.

Hardware

The Xbox One's exterior casing consists of a two-tone "liquid black" finish; with half finished in a matte grey, and the other in a glossier black. The Xbox One's components were designed to evoke a more entertainment-oriented and simplified design than previous iterations of the console; among other changes, the LED rings used by the Xbox 360 are replaced by a glowing white Xbox logo used to communicate the system's status to the user.

The Xbox One has an APU with eight x86-64 cores clocked at 1.75 GHz, based on the Jaguar architecture from AMD, and 8 GB of DDR3 RAM with a memory bandwidth of 68.3 GB/s. The memory subsystem also features an additional 32 MB of "embedded static" RAM, or ESRAM, with a memory bandwidth of 102 GB/s. Eurogamer has been told that

for simultaneous read and write operations the ESRAM is capable of a theoretical memory bandwidth of 192 GB/s and that a memory bandwidth of 133 GB/s has been achieved with operations that involved alpha transparency blending. The system includes a 500 GB non-replaceable hard drive, and a Blu-ray Disc optical drive.[27][36][37] Kotaku, Game Informer, and Gizmodo state that 3 GB of RAM will be reserved for the operating system and apps, leaving 5 GB for games. The graphics processing unit (GPU) is based on an AMD GCN architecture with 12 compute units, which have a total of 768 cores, running at 853 MHz providing an estimated peak theoretical power of 1.31 TFLOPS. For networking, the Xbox One supports Gigabit Ethernet, 802.11n wireless, and Wi-Fi Direct.

The Xbox One will support 4K resolution (3840×2160) (2160p) video output and 7.1 surround sound. Yusuf Mehdi, corporate vice president of marketing and strategy for Microsoft, has stated that there is no hardware restriction that would prevent games from running at 4K resolution. The Xbox One will support HDMI 1.4 for both input and output, and does not support composite or component video.

Xbox General Manager of Console Development Leo del Castillo has said the Xbox One will be able to monitor internal temperatures and adjust accordingly. As the system generates more heat, the fan speed will be increased to compensate. Additional measures can be taken, including forcing the hardware to run in a lower power state – a new feature that wasn't present on the Xbox 360. Restricting power consumption lowers maximum performance, but the setting would be intended as a last resort to avoid overheating that can lead to permanent hardware damage.

Controller

The Xbox One controller maintains the overall layout found in the Xbox 360 design. The directional pad has been changed to a four-way design, and the battery compartment is slimmer. Menu and View buttons have replaced the Start and Back buttons.[46] Each trigger will also feature independent rumble motors called "Impulse Triggers", which allows developers to program directional vibration. One trigger can be made to vibrate when firing a gun, or both can work together to create feedback that indicates the direction of an incoming hit. It remains to be seen exactly how developers will use the new feature. Pre-ordered Xbox One controllers have the words "Day One 2013" engraved in the center.

Kinect

Further information: Kinect on the Xbox One

"We purposefully did not target the highest end graphics. We targeted it more as a broad entertainment play. And did it in an intelligent way."

– Greg Williams, GM of Xbox silicon development

The Xbox One will ship with an updated version of the Kinect sensor; the new Kinect uses a 1080p wide-angle time-of-flight camera (in comparison to the VGA resolution of the previous version), and processes 2 gigabits of data per second to read its environment. The new Kinect has greater accuracy over its predecessor, can track up to 6 skeletons at once, perform heart rate tracking, track gestures performed with an Xbox One controller, and scan QR codes to redeem Xbox Live gift cards. The Kinect microphone will remain active at all times so it can receive voice commands from the user when needed, even when the console is in sleep mode (so it can be woken back up with a command). The Xbox One will still function if the Kinect sensor is disconnected, and if the sensor is connected to the console, users retain the right to turn off all Kinect functions.

A Windows-compatible version of the new Kinect will be released in 2014.[54]

Software and services

Media inter-connectivity

Similarly to Windows 8, the Xbox One will be able to snap applications (such as music, video, Skype, and Internet Explorer) to the side of the screen as a form of multitasking. The Xbox One will also be able to serve as a pass-through for an existing television set-top box over HDMI. This functionality allows users to watch live TV from their existing provider through the console, and access features such as show recommendations, an electronic program guide, and voice commands. The set-top box is controlled by the console through either an IR blaster or the HDMI-CEC protocol.

Voice control

The console will feature a similar, albeit richer set of voice control abilities than those found in the first generation Kinect. This will allow users to control Xbox functions via voice command. All voice control will be coordinated through the Kinect, and with this ability Skype will also become a function of the new Xbox.

Operating system

The device will run three operating systems: Xbox OS,[citation needed] an OS based on the Windows kernel, and another OS that will allow the other two operating systems to communicate by virtualisation (as a hypervisor). Such integration will include features like snapped Skype calls while in game.

The Windows edition on the Xbox will not be compatible with standard Windows apps, though developers will be able to port them over with little effort.

Xbox Live

Microsoft have stated that the Xbox Live service will be scaled up to use 300,000 servers for Xbox One users, but have not stated how many of the servers will be physical and how many will be virtual. Cloud storage will be offered to save music, films, games and saved content and developers will be able to use Live servers (along with the Windows Azure cloud computing platform) to offer "massive", "living and persistent worlds." The service will still be subscription-based. The friends list will expand to 1,000 friends.

SmartGlass

Xbox SmartGlass will provide extended functionality on the Xbox One, allowing Windows Phone smartphones, Windows RT, and Windows 8 tablets to be used as a "second screen." A demo during the E3 press conference demonstrated its use for setting up a multiplayer match in another game in the background on a tablet while playing another game on the television.[28]

Recording and streaming

Xbox Live Gold subscribers will be able to use the Upload Studio app to edit and share clips from the last five minutes of gameplay footage that is automatically recorded by the console.[67] Integration with the live streaming platform Twitch will also be provided; users will be able to use voice commands to immediately begin streaming footage of their current game directly to the service, and use the Kinect microphone for commentary and voiceovers.[68][69] Despite the ability to record gameplay, the Xbox One will not include DVR functionality for recording television programs; executive Yusuf Mehdi indicated that the Xbox One would "work in tandem" with existing TV providers, but that Microsoft may need to work with them directly to provide extended functionality such as DVR integration.[70][71]

Games

Microsoft presented several first-party and third-party titles for Xbox One at its E3 2013 news conference, some of which will be exclusive to the console. First-party titles unveiled for the Xbox One include Forza Motorsport 5, Ryse: Son of Rome, a revival of Killer Instinct, Project Spark and a teaser for an upcoming Halo game.

Xbox One games will be distributed on Blu-ray Disc and digitally through Xbox Live Marketplace. Games will be installed directly to the player's hard drive for faster access time, and will require the disc to play. However, if the game is installed on another console, and that console owner no longer has access to the disc, the owner has the option of unlocking the install on their hard drive by purchasing it through Xbox Live; the installed game will then act as a digital download. Though Microsoft had originally planned to tie disc-based games to the user's account (see Used games and Internet verification), disc-based games can be traded and sold by players after purchase.

Single-player games that take advantage of cloud computing will require an internet connection.

The Xbox One will not be backwards compatible with original Xbox or Xbox 360 games.

Reception

After the official reveal in May 2013, the editorial staff of Game Informer offered both praise and criticism for the console. Matt Helgeson described the console as Microsoft's intent to "control the living room". He called the Xbox One's instant switching features "impressive", and that the console was "a step in the right direction" with regards to TV entertainment, especially the prospect of avoiding the usage of non-intuitive user interfaces often found on cable set-top boxes. Jeff Cork said that Microsoft had "some great ideas" for the console, but that it failed to properly communicate them.

Following Microsoft's E3 press conference on June 10, 2013, perceptions of the Xbox One by critics changed. Multiple GameSpot writers were critical of the new console; Mark Walton considered the Xbox One's launch lineup to be "uninspired", "lackluster" and plagued by "old men in suits, a stream of buzzwords, and superficial games that valued visuals over innovation" (as opposed to the "new generation of gaming" that Microsoft had promised to present during the event, by contrast to its previous television-oriented presentation) alongside strict digital rights management (DRM) practices,[76] while editor Tom McShea noted that despite the increased capabilities and cloud-oriented nature of the Xbox One, the presentation consisted only of "pretty games that didn't offer any noticeable change to

the core experience we've already been playing [on the Xbox 360]", providing existing owners with little reason for spending \$499 on the new console. Journalists and consumers jokingly named the console the "Xbone", believing that Microsoft's decisions for the systems was in poor judgement.

After Sony's E3 press conference later that evening, McShea went on to say that Microsoft had become anti-consumerist, trying to "punish their loyal customers" with strict restrictions, and that "by saying no to the used game restrictions and always-online that Microsoft is so happily implementing on the Xbox One, Sony has elevated the PlayStation 4 as the console to grab this holiday season."

Rafi Mohammed, author of "The Art of Pricing" said on Bloomberg TV that Microsoft priced the Xbox One "too high" and the \$100 premium over competitor could "derail" the system this holiday.

Initial used games and Internet verification policies

When first revealed, Microsoft unveiled a number of features and policies for Xbox One games that placed an emphasis on the console's "always-connected" design and digital content delivery, and that would bring a number of benefits to both developers and players. A DRM system would tie all game purchases (regardless of whether it was purchased digitally or physically) to the user's Xbox Live account and their Xbox One console. The system would allow a user's games to be accessed locally by any user on their Xbox One, through a cloud-based game library on any other Xbox One, and would allow a game library to be shared with up to ten designated "family" members (each game could only be played by one remote player at a time). However, this system would have also required the console to connect to the Internet on a periodic basis (at least once every 24 hours) in order to synchronize the library and download updates for games; failing to do so would prevent any games from being played until the console is connected to the internet again. Users would be able to trade in games at "participating retailers" at no extra charge, and could also transfer a game directly to any Xbox Live friend on their list for at least 30 days, but only once.

Industry and consumer reaction to these plans were largely negative. Gaming and PC websites expressed concern over the restriction on the resale of used games, and the requirement of online verification every 24 hours for offline games. Further official details released in June regarding the policy towards used games and Internet connection requirements caused negative backlash among gaming websites as well as concern among independent video game retailers. Microsoft clarified the situation, stating that it would be up to the game developers to decide if used games could be played and if there would be any activation fees. Matt Peckham of Time believed that the Xbox One used games policy went against the first-sale doctrine.[92] Wedbush Securities analyst Michael Pachter has suggested that the game developers would limit the used game market for a period after the game was released but might then allow used games to be played.

Xbox Chief Marketing and Strategy Officer Yusuf Mehdi defended the changes, stating that the Xbox One was primarily designed with digital distribution in mind, and that the changes to the licensing model on the console would be "easier to understand" when applied to just digital copies of games. He contended that the new system, which would also allow games to be accessed directly from cloud servers by various means (regardless of how they were purchased), would allow publishers to use "a diversity of business models" to meet their individual needs. Mehdi also noted that Microsoft was not attempting to "give in" to the criticism of used games by publishers, but rather trying to balance the needs of consumers and the industry itself. The position on online requirements was reinforced by Don Mattrick, the former president of Microsoft's Interactive Entertainment Business, who stated that those without Internet connectivity should simply purchase an Xbox 360 instead.

In planning its presentation of the competing PlayStation 4 at the E3 2013 conference, Sony looked at the negative criticism Microsoft received for its Xbox One DRM policies; SCE Worldwide Studios president Shuhei Yoshida stated that the PlayStation 4's DRM policy, which generally allows for used games and sharing, was well established before the Xbox One reveal, but called the public reaction a "very useful source" for how to present details of the console's capabilities. As such, many journalists considered that Sony had "won" the E3 conference over Microsoft, in part by highlighting its position on used games, Internet connectivity, and DRM in a compelling manner.

In response to the growing criticism, Microsoft released a statement on June 19 outlining how the policies as originally envisioned would be dropped in favor of a system that works in much the same way as the Xbox 360. The new policies include no Internet connection requirements (except for a one-time connection required for initial installation of a new game), no disc authentication, and no regional restrictions. As a result of the changes, the family sharing feature was dropped, as was the sharing feature for digital titles. Xbox One chief product officer Marc Whitten stated that

the removal of the family sharing feature was due to the revised Xbox One policies so that they could deliver the console on time, and that the family sharing feature may return in the future. A patch will be required when the Xbox One is first connected to the Internet in order to enable offline mode and update the system software to allow the other policy changes. In his statement on the new policies, Mattrick said that the company took notice of the negative public opinion, and he thanked the public for giving their feedback "to reshape the future of Xbox One". Other analysts believed that the change was in direct response of Sony's aggressive position during the E3 conference.[103] Similar to the "Xbone" name, many journalists and players jokingly nicknamed the Xbox One as the "Xbox 180", due to Microsoft's reversal of their policies. Mattrick, who had been a leader in the Xbox One development, announced his departure from Microsoft on July 1, 2013, to become CEO of Zynga. Analysts speculated that his departure was predicated on the poor response and subsequent reversal of the plans for the Xbox One.

In an August 2013 interview with Eurogamer, Microsoft Studio's CEO Phil Spencer stated that their changes on the Xbox One are part of a "two-way conversation we have with our customers", and a strength on their ability to react to feedback, rather than a negative. Spencer stated that they want to remain true to the "vision around the digital ecosystem we want to put on Xbox Live", but recognized key features that consumers still want to have, and that implementing these features may push back the timing of their release on the Xbox One platform.

Privacy concerns

The console's prominent use of the Kinect sensor was the subject of concerns surrounding its potential use for surveillance, stemming from the originally announced requirement that the peripheral be plugged in at all times for the console to operate. Privacy advocates contended that the increased amount of data which could be collected with the new Kinect (such as a person's eye movements, heart rate, and mood) could be used for targeted advertising. Reports also surfaced regarding recent Microsoft patents involving Kinect, such as a DRM system based on detecting the number of viewers in a room, and tracking viewing habits by awarding achievements for watching television programs and advertising. While Microsoft stated that its privacy policy "prohibit[s] the collection, storage, or use of Kinect data for the purpose of advertising", critics did not rule out the possibility that these policies could be changed prior to the release of the console. Concerns were also raised that the device could also record conversations, as its microphone remains active at all times. In response to the criticism, a Microsoft spokesperson stated that users are "in control of when Kinect sensing is On, Off or Paused," will be provided with key privacy information and settings during the console's initial setup, and that user-generated content such as photos and videos "will not leave your Xbox One without your explicit permission." Microsoft ultimately decided to reverse its decision to require Kinect usage on the Xbox One.

Subsequent to the Xbox One's announcement, but prior to Microsoft's policy reversal, U.S. Representatives Mike Capuano and Walter Jones proposed and filed the We Are Watching You Act; the act would require 'video service operators' to inform users on how personal data is collected and used, require that users explicitly opt-in to data collection, provide an on-screen notification when data is being collected, and to provide identical service for those who opt-out. The Xbox One was not mentioned in the proposed act by name, as the unit also targeted data collection by the set-top-boxes supplied by television providers.

Washington DC (2013-07-21 15:52)

Washington—This Town—might be loathed from every corner of the nation, yet these are fun and busy days at this nexus of big politics, big money, big media, and big vanity. There are no Democrats and Republicans anymore in the nation's capital, just millionaires. That is the grubby secret of the place in the twenty-first century. You will always have lunch in This Town again. No matter how many elections you lose, apologies you make, or scandals you endure. In This Town, Mark Leibovich, chief national correspondent for The New York Times Magazine, presents a blistering, stunning—and often hysterically funny—examination of our ruling class's incestuous “media industrial complex.” Through his eyes, we discover how the funeral for a beloved newsman becomes the social event of the year. How political reporters are fetishized for their ability to get their names into the predawn e-mail sent out by the city's most powerful and puzzled-over journalist. How a disgraced Hill aide can overcome ignominy and maybe emerge with a more potent “brand” than many elected members of Congress. And how an administration bent on

"changing Washington" can be sucked into the ways of This Town with the same ease with which Tea Party insurgents can, once elected, settle into it like a warm bath.

liberals' racial bullying (2013-07-21 21:22)

Democrats spent the first century of this country's existence refusing to treat black people like human beings, and the second refusing to treat them like adults.

After fighting the Civil War to continue enslaving black people and then subjecting newly freed black Americans to vicious, humiliating Jim Crow laws and Ku Klux Klan violence, Democrats set about frantically rewriting their own ugly history.

Step 1: Switch "Democrat" to "Southerner";

Step 2: Switch "Southerner" to "conservative Democrat";

Step 3: Switch "conservative Democrat" to "conservative."

Contrary to liberal folklore, the Democratic segregationists were not all Southern – and they were certainly not conservative. They were dyed-in-the-wool liberal Democrats on all the litmus-test issues of their day.

All but one remained liberal Democrats until the day they died. That's the only one you've ever heard of: Strom Thurmond.

As soon as abortion is relegated to the same trash heap of history as slavery has been, liberals will be rewriting history to make Democrats the pro-lifers and Republicans the pro-choicers. That's precisely what they've done with the history of race in America.

In addition to lying in the history books, liberals lied on their personal resumes. Suddenly, every liberal remembered being beaten up by a 300-pound Southern sheriff during the civil rights movement.

Among the ones who have been caught falsely gassing about their civil rights heroism are Bob Beckel, Carl Bernstein and Joseph Ellis. (Some days, it seems as if there are more liberals pretending to have been Freedom Riders than pretending to be Cherokees!)

In the 1950s and '60s, Democrats were running segregationists for vice president, slapping Orval Faubus on the back and praising George Wallace voters for their "integrity." (That was Arthur Schlesinger Jr. in The New York Times.)

But the moment the real civil rights struggle was over, liberals decided to become black America's most self-important defenders.

Of course, once we got the Democrats to stop discriminating against blacks, there was no one else doing it. So liberals developed a rich fantasy life in which they played Atticus Finch and some poor white cop from Brooklyn would be designated Lester Maddox (racist Democrat, endorsed by Jimmy Carter).

White journalists who didn't know any actual black people (other than Grady the maid) became junior G-men searching for racists under every bed, requiring a steady stream of deeply pompous editorials.

You will never see anything so brave as a liberal fighting nonexistent enemies.

Liberals drove the entire country crazy with their endless battles against imaginary racists, to make up for their having been AWOL during the real fight over civil rights.

Throughout this period, every black-on-white crime became a re-enactment of "To Kill a Mockingbird"; every cop who shot a black perp was Bull Connor; and every alleged racist incident was instantly presumed true, no matter how preposterous.

When it turned out the hate crime was a hoax, the cop was being mugged and the black kid was guilty, the whole story would just quietly disappear from the news, as if the media were reading a bedtime story to a child, whispering the ending and tiptoeing out of the room.

Then came the O.J. verdict.

Millions of Americans watched as a mostly black jury acquitted an obviously guilty black celebrity and saw black America cheer the verdict. The sight of black law students whooping and applauding O.J.'s acquittal had the same emotional impact as watching Palestinians celebrate the 9/11 attack.

Overnight, the white guilt bank – once thought "too big to fail" – was shut down. Henceforth, instead of producing

stuttering embarrassment, liberal moral intimidation on race produced only eye-rolling. With that, America became a much healthier country, especially for black people.

Without nonsense claims of racist "code words" to stop them, Republicans were finally able to implement long-sought reforms on crime and welfare. The unqualified success of Rudy Giuliani's crime policies in New York saved tens of thousands of black lives. Welfare reform was such a stunning success that Bill Clinton claimed credit for it.

Blacks had won the final civil rights battle: The right to be treated like adults. Even liberals ceased their oohing and ahing over every little thing any black person did.

But the post-O.J. paradise came to a crashing halt with the appearance of Barack Obama.

Obama allowed liberals to return to accusing Americans of being racists and get the most liberal president America has ever seen at the same time.

The only firm evidence that there are any actual racists left in America is the fact that so many whites voted for Obama as some sort of racial penance.

More white people voted for Obama in 2008 than had voted for any Democratic presidential candidate in nearly 40 years.

They must have felt guilty about something. Not harboring any racist impulses, I was free to vote Republican.

Now that Obama is up for re-election, liberals are back to their old tricks. A nation with more child pornographers than racists – a nation that's already elected a (half) black president once – is suddenly said to be bristling with racists again!

For many, though, even the most desperate measures have not been any cancellations or delays of KBR's \$15 billion backlog compared to roughly \$10 billion in annual revenue. As an avid athlete and coach, he liquidation kansas city is loath to be seen as giving up. From a business perspective, a company can voluntarily go into liquidation known as a CVL or their creditors can do it if they owe more than 750.

The Enemies Within (2013-07-29 00:16)

This book contains the keys for understanding the political process in America. The Communist fronts of the 1930s and 40s never disappeared, but merely changed their names or even remained as they were. The end of the Cold War, it turns out, was irrelevant for the continued advance of socialism in America. All the basic methods for infiltrating American institutions were at hand, and the socialists were determined to change the country, change its economic system, and eliminate capitalism as far as they were able. In fact, this book also shows that the conservatives have dropped their guard even as they have dropped the ball. Nowhere do we find a firm counter to socialist extremism. Everywhere the socialists grab issues, even inventing crises where there are none. In this book we learn about the various fronts in the war of the far left to remake America as a socialist society. Immigration, the environment, and minority issues are shown as major avenues for the advance of socialism. If you want to understand what's really

going on in the U.S., you have to read this.

Bought Earthbound for SNES (2013-07-30 01:29)

I used to play this game on ZSNES and then tested on my GP2x Caanoo handheld in 2011. This RPG is collectible. My SNES reproductions are even rarer.

I had 300 comments from Gamespot, but then they deleted them all (GiantBomb) in the name of profit. . It's bizarre. I bet when I own a 950 games in a few years, people still ignore me. I bet I have the same games everybody else buys, but they hate my *talent*.

The Catch 22 in life. (2013-08-23 19:07)

My college wants everybody to be on Facebook. The problem with Facebook is nobody answers and declining followers. I am on Twitter, same thing, nobody answers and declining followers. So I know I stalled everybody by disabling Facebook! I fare better on Youtube, but the shitheads on Youtube thumbs down without looking at Discogs. I steal videos of much more talented people (I am stupid btw) and they do not comment.

catch-22; plural noun: catch-22s 1. a dilemma or difficult circumstance from which there is no escape because of mutually conflicting or dependent conditions.

Why World of Warcraft loses membership. (2013-08-25 21:43)

I must confess, I haven't logged into World of Warcraft for over two years. TWO years. And, it's not because the game changed much, but I have, and so has the gaming community. We've come to expect better things. Yet, I still compare EVERY new MMO game to World of Warcraft in some aspect. My criteria for judging MMO's has mostly been, "Is this as fun as WoW?" I know I'm not alone in using this criteria. And, for the most part, new MMOs have fallen short of WoW's appeal. But, it's still no surprise that Blizzard saw a loss of 1.3 million subscribers for World of Warcraft in the first quarter of 2013, and another 600,000 in the second quarter. There's an obvious reason that WoW has lost 1.9 million subscribers in three months; people have changed. The key to World of Warcraft's appeal and success was that everyone was playing it; your best friends, your wife, your uncle, your mailman, your professor, your dog-walker, Mr. T, etc. This is no longer the case. The gamers that grew up playing World of Warcraft nearly ten years ago are now ten years older. Think about that for a minute; where were you ten years ago? I, myself, was in high school, with nothing else to do but neglect my homework and play video games. Where am I now? Married with two kids and a full time job. Unfortunately, I don't have time for three hour raids and dungeon sessions. I certainly wouldn't be able to play the game for a long enough period of time that would provide any worth to having a monthly subscription, so, again unfortunately, I go without World of Warcraft. It's just not worth it to me anymore. With the release of newer, more polished MMOs such as Guild Wars 2 and Neverwinter, there's no denying that WoW's graphics and cost model need updating. Guild Wars 2 was a one time purchase of \$60, and then you can play it free for life (or until the company shuts down the servers), and Neverwinter, which will be hitting retail sometime soon, is now in a free, open beta. Free. But where WoW falls short on graphics, Guild Wars 2 and Neverwinter fall short (in one way or another) on gameplay.

I'm just starting my journey with Neverwinter, so I can't say just yet whether or not it has staying power, but if it's anything like my MMOs of games past, my interest in it won't last more than a year. I haven't logged into Guild Wars 2 in six months. I haven't logged into DC Universe Online since a week after the latest content update was released. I haven't logged into Defiance since a week after finishing up my review for Den of Geek. The money that I used to spend on my monthly subscription to World of Warcraft now goes to the necessities in life. On top of that point, I have to be more choosy with the games I want to spend my hard-earned money on. I can't just go to GameStop and buy 2 or 3 games at a time like I used to when I was 15 years old without any bills to pay. So, some games are missed, and I tend to look for the cheaper options for gaming; World of Warcraft is not one of those options. It's not like there isn't a cost barrier for WoW to get new subscribers, either. You'd have to first purchase World of Warcraft and its first two expansions, The Burning Crusade and Wrath of the Lich King for \$19.99, then Cataclysm for another \$19.99, then Mists of Pandaria for another \$39.99, PLUS a monthly fee? No thanks. World of Warcraft would undoubtedly benefit from a free-to-play model (which every Tom, Dick and Harry on the web is crying for). You can add my name to that list, sure, but the game would still have to be updated graphically to hold my interest. There's also the need for that "new-new"; gamers always want to try the newest games. Between new retail releases from big companies like EA, Perfect World, NCsoft, Trion Worlds, XBLA and PSN titles, Indie releases every week, and alphas, closed betas, open betas, etc, gamers are constantly getting new options for games to play. And, it's nearly impossible to keep up. I can't tell you how many games I've missed already this year that I, hopefully, will get a chance to go back and play at some point, simply because there isn't enough time in the week to play all the new games and still keep up with real life. Thankfully, gaming is part of my career, so I do get to play more than the average adult gamer (awesome). Still, there's not enough time in the week to play all of the new games that I would like to get my hands on. There's no time to play it, and my pockets aren't endless, so where would World of Warcraft even fit into this equation? It doesn't.

Red Hat White Paper (2013-09-02 08:39)

Red Hat Enterprise Linux appeals to people who prefer a cost effective, safe, and stable operating system.

The main appeal that is Linux is designed for an open source (freely available) vs. a closed source (proprietary software) operating system. However, all operating systems are in danger of being hacked. Even so, in 2004, Microsoft security flaws were at a 38 % critical status while 10 % of Red Hat security flaws were critical status.

The main theme of this paper is that the Linux design ensures security better than Windows.

The benefits of Red Hat Enterprise Linux include:

-

Red Hat Enterprise Linux provides

95 % to 140 % advantage over Windows for performance of real-world enterprise workloads.

-

Red Hat Enterprise Linux supports 4096 processors while Windows Server 2012 supports only 64 processors.

-

Red Hat supports more RAM than Windows

-

Linux can run in server farms.

-

Red Hat includes mandatory access control with SELinux and sVirt which means that it has an extra layer of security originally in UNIX .

-

Red Hat Enterprise Linux virtualization can perform as well or better than bare metal (Cloud Infrastructure firmware).

-

The Kernel Virtual Machine permits Linux to be a Type 1 bare metal hypervisor from the kernel which creates stability and security inside the virtual machine.

The sVirt integrates with a virtualization management abstraction layer called libvirt to deliver a MAC-like agenda for virtual machines. This architecture permits all virtualization platforms preserved by libvirt and all MAC employments maintained by sVirt to operate together.

The recommendations for Red Hat Enterprise Linux are as follows:

I recommend Scientific Linux which is a free Red Hat Enterprise Linux clone download that has NTFS-3g for Windows NTFS drivers and RPM Fusion. It can be used like a RHEL web server, because it is a clone after all.

VMware, vSphere, or KVM are recommended for Red Hat Enterprise Linux, because both are enterprise -grade virtual machines. I strongly recommend KVM virtualization, because it is much more efficient with time and allows the user to perform tasks faster rate with 4096 processors.

The time management improvement when the operating system in the VM is hacked and has SELinux and sVirt integration, you can delete the VM right away and you can use the backup copy immediately.

Cyber threats

One type of terrorism is cyber warfare attack which endangers America's financial and national security.

One example of a serious cyber threat is China or Russia hacking into our power grid and leaving a logic bomb causing a situation similar to the Northeast Blackout of 2003. The Northeast Blackout of 2003 was caused by UNIX kernel panic which caused the affected operating system to crash. A logic bomb is a malicious code that waits for a sequence of events which causes the kernel panic.

It's evident that cyber warfare is an effective power tool for any government to use against an ally or enemy that threaten communications systems and/or a deactivates national infrastructure. (

Schneier , B.

, 2013)

Better security

The commercial infrastructure frequently undervalues the occurrence and possibility of breaches, with numerous groups reluctant to depict the amount of the data loss. Executives are always on the lookout for breaches. Cyber attacks pose a substantial menace to cherished commercial data as well as legal and promotional problems that can touch customer assurance and maintenance. Security at all levels is compulsory, from developers reducing the possibility for danger in their submissions, to system administrators logging, monitoring access, and limiting and keeping systems current. Like Windows, Linux has security like access control lists, ciphertext, Kerberos, MD5 encryption , SHA2 hash algorithm, root password and privileged ports. Red Hat Enterprise Linux delivers satisfactory application support so that deployment security is consistent, reliable, and feasible. Today, IT establishments use a variety of approaches to secure enterprise infrastructure, such as isolating environments with deploying firewalls, virtualization, performance deep packet inspection and executing untested code called

sandboxing. (Redhat, 2013)

Privileges

Linux security is more ideal, because users don't have the same "root" privileges as Windows. Windows users can choose to have an administrator account, but with Linux users, only administrators can have root privileges (superuser). Most Linux users do not have access to the root account meaning that they cannot do damage to their Linux.

(

Noyes, K., 2010)

Social engineering

Social engineering, such as viruses and worms, is a method that cyber attackers use to entrap the user to do damage to their system unknowingly. The malicious code can be easily spread when users open attachments that carry worms and viruses.

Windows is more prone to social engineering than Linux, because malicious codes cannot be executed on Linux since the root account is locked out to all users, except for administrators. The advantage here is that only administrators have the root access, thus preventing damage to a Linux system.

(

Noyes, K., 2010)

Monoculture effect

Windows has a monoculture effect meaning both viruses and Windows users have the same technology.

Microsoft Windows dominates most of the email such as Outlook and Outlook Express.

Conversely, Linux has a generic diversity which minimizes effect of viruses, worms, and Trojan horses. (

Noyes, K., 2010)

Audience size

Most viruses target Windows by virtue of its large audience.

The fact that millions of people are using Windows makes it an attractive target for attacks.

(

Noyes, K., 2010)

Windows in Organizations

Windows 7, 8 and Windows Server 2012 are the chosen operating system of many organizations.

It is dangerous to have a ten year old Windows XP, because its vulnerable to hacking. Even with Windows emulation with Crossover Linux (wine front-end) compatibility, organizations are reluctant to make a switch to Red Hat Enterprise Linux clones, because Linux isn't marketed to business.

Security takes a back seat to application compatibility in the Cyber Cold War era. (

Noyes, K., 2010)

Linus Benedict Torvalds

Law

Linus law says, "Given enough eyeballs, all bugs are shallow". (

Noyes, K., 2010)

Consequently, Windows users only have a limited set of paid developers (less eyeballs) who work to find problems in code. Only after a solution is found, does it get publicized.

Linux would have countless users viewing the code at any time, making it more likely that someone would identify a flaw, and fix it immediately for everybody's usage.

Noyes, K., 2010)

Virtual Machines

Applying virtual machines to Linux enhances security and ensures process availability.

There are three key features of a virtual machine. First, each virtual machine is isolated from each other. If there is a kernel panic on one virtual machine, other virtual machines are not affected. Second, the hypervisor is situated in-between the server hardware and the software stack.

This means legacy applications are using the latest hardware technology even though the operating system doesn't support the necessary drivers in the virtual machine.

(Archive.org, 2013)

Kernel Virtual Machine

The above chart shows how Red Hat Enterprise Virtualization is based off KVM.

First, KVMs were designed from some hardware assisted virtualization.

KVM was designed into an optimized hypervisor solution of baggage. The KVM in Linux can use the entire hardware vendor ecosystem.

KVM can store VM images into every storage supported by Linux such as SATA, SCSI, network attached storage and SAMBA or SAN or iSCSI.

It has a virtualization manager that has advanced capabilities for guests and hosts like high availability migration, and system scheduler. Also, there is a reporting engine that has a documented database schema and sample reports so that Red Hat Virtualization Manager can extract information.

Red Hat can prioritize high availability of critical virtual machines so that ranking can take place so mission critical applications may be a priority on remaining hardware whilst other virtual machines are reduced at the same time. Red Hat virtualization manager can track live migration for movement of running virtual machines from one host to the next host without a performance hit. Red Hat Virtualization manager has a search driven interface that can tag for searching virtual machines for host characteristics. (archive.org, 2013)

VMware

The above charts show that VMWare vSphere can improve the deployment of infrastructures.

The

vCenter has fast provisioning by replication of virtual machines. vCenter has load-balancing,

live migration of virtual machines,
 high availability for virtual machines,
 and has an automated patch management for hypervisor.

The purpose of vCenter is to use a VMware vSphere farm which has more services in less physical servers. Both virtual machines play the identical set of events.

The virtual machines check each other's heart beat and take over if VMs miss heart beats. vSphere has its individual virtual switch, because administrators tend to prefer physical networks. At a datacenter level, disputed switches span numerous vSpheres hosts and aggregate networking. The switch abstraction configuration of individual virtual switches and enables centralized administration. There is a VMware Site Recovery Manager to restart virtualized ICT infrastructure in a backup center when a main datacenter fails.

The Site Recovery Manager is rapid, reliable, affordable, and manageable. VMware is 64 % of the market while Microsoft virtualization is 27 % as seen in the chart below.

Traditional x86 security approaches

The hardware layer is set to different devices and computes resources.

The OS layer would need control of the hardware operation. The OS layer is responsible for prioritizing the hardware resources and sharing them among the different tasks.

The services layer would use the OS as an interface to access required hardware resources.

The hypervisor will allow underutilized servers to become utilized servers by producing independence amid hardware and software layers. The application has the ability to run in numerous dissimilar development and test systems. The protection is where the administrator has a low-cost storage area network.

Deployment is where virtualization reduces administrative effort and increases deployment speed.

(archive.org, 2013)

Six layers of VES

There are six features that VES or server consolidation uses to host aging applications or operating systems on modern hardware, for application isolation and security.

The six layers of VES are virtual access software, virtual application environment software, virtual processing software, virtual storage software, server provisioning, and management software and security software. Virtual access software will allow applications to be accessed from almost any intelligent access point device over any network without applications ever having to be architected for supporting that device or network.

There is virtual user interface software or various types of portal software.

Second, virtual application environment software creates an application and deployment environment which would develop applications so they are more reliable and robust and unaware of the underlying hardware or operating environment.

Third, virtual processing software appears on main systems such as operating environment, single-system image clustering software making many systems appear to be a single computing resource running a single operating environment.

This would include load balance software, data and application availability software, single system image clustering, and parallel processing software.

Fourth, virtual storage software tolerates applications unaware of how and where application and data are stored including storage replication and file systems.

The software supports network attached storage and storage area networks. Fifth, the security provisioning and management software allows administrators and operators to manage, operate and load environment categories. This is an example of module of on-demand or adaptive environment methods to application deployment.

Sixth, the security software is decomposed into components, access control and identify management are much more significant.

Without strong security, black hats could destroy the distributed architecture and commander application components or resolves to an organization's disadvantage. (

Gillen, A., 2006)

SELinux

By leveraging the trust of minimum privilege and over the organization of a security policy on the system, SELinux stops the negotiation of a whole system due to the negotiation of a single program running which would then be raised privileges. The second benefit is that SELinux defends the privacy and truthfulness of data. By eliminating preference from users over which way data may be operated, delicate data can be limited from inadvertent, deletion, modification or sharing when security-relevant access is taking place or when procedure struggles to open a file and caught in the kernel by SELinux. (

Runge, C., 2013) (redhat.com, 2013)

With respect to the kernel, SELinux adds a security attendant comprehending the security policy. SELinux's detached implementation mechanism receives and smears the policy decision. The enforcement mechanism and policy are autonomous; policy changes do not necessitate variations to the implementation device. SELinux modifies numerous user- space components for distinguishing and treating policy development, role changes, security contexts, and other tasks vital for performing mandatory access control on the system. SELinux has contents, object classes, labels, policy rules, interfaces, and attributes. (

Runge, C., 2013) (redhat.com, 2013)

Discretionary Access Controls (DAC)

Most Linux and UNIX-based operating systems practice an access control tool known as Discretionary Access Control (DAC). Under a DAC scheme, directories and files on the system are labeled resolving a set of permissions on behalf of which group and user the file is proper to and what that user, group, or others interact with the object, such as reading, writing, or executing. This comparatively simple yet mainly influential scheme permits multiple users and programs to harmonize on the same system, the permissions are properly set, ensures that users have control over their objects but no others. By exploiting a program, such as a daemon (Nagios Core) that scores with filled root permissions, the user can use that database as an introduction pad for his/her preferred malicious actions on the system. (

Runge, C., 2013) (redhat.com, 2013)

Mandatory Access Control (MAC)

Mandatory access control removes security decisions from of the user. While users and groups may still own files and directories on the system, permission is eventually administrated by a security policy, that labels which users and programs can contact which objects on the system. This security policy is required over all procedures and objects on the hardware. First, the trusted operating systems that delivered mandatory access control had mostly distinct offerings from their normal counterparts. The inadequate audience is consisting of intelligence and military applications; these important systems had recognized less prominence from operating system vendors and third-party vendors alike. (

Runge, C., 2013) (redhat.com, 2013)

Multi-Level Security (MLS)

Multi-level security has a specific mandatory access control model that has confidentiality.

Traditionally, a physical separation of a dedicated system would split up among Top Secret, classified, and confidential. The multi-level security is dynamically enabled to have multi-category security which has added a discretionary labeling scheme.

(

Runge, C., 2013)

Svirt

It is important to know that sVirt repeatedly manages the virtual machine process security boundary, shielding the hypervisor, host, and other virtual machines from hacking.

An example would be each virtual machine has a process; labeled by SELinux, successfully forming a security limit around every virtual machine. The sVirt extends the SELinux classification scheme to VMs; thereby, leveraging the established SELinux capabilities and as well as providing extra significant benefits for security administration.

Each system resource such as counting data files, devices, and processes labeled by a type that entitles its security sVirt dynamically labels the VM procedures have policy recognized on the VM file images. As a result, the VM technique cannot contact possessions separate of the VM. These VM process labels are applied mechanically and vigorously, stopping the administrative problem of manually labeling resources and building the entire security solution to be policy-driven-based. (

redhat.com, 2013)

Benefits

Some of sVirt's benefits are that it has proven security on virtual environment and was co-developed by the National Security Agency.

There is protection of network resources, data files, memory, and applications.

There is protection against virus attacks across virtual machines. The sVirt has integration with SELinux protects of virtual machine resources running a Linux guest.

There is a policy driven security with low administration liability.

(

redhat.com, 2013)

Hypervisor security threats

Hypervisor security threats are when a compromised application is running on a virtual machine and attacks KVM so that it may access resources.

This can include devices within the physical machine, applications, or host operating system.

This threat is a threat vector unique in virtualization and represents a risk that the fundamental real machine would be compromised when there are sole virtual application weaknesses. (

redhat.com, 2013)

VM Security threats

This is when there is a compromised application running in a VM which attacks a hypervisor to control another VM. This is unique to virtualization and represents risk as a multitude of VMs images are compromised with viruses due to vulnerability.

(

redhat.com, 2013)

Conclusion

An age of multi-computer households permits Linux to be an enormous savings over Windows.

Linux has all the software repositories in one place so the administrator doesn't have to search the web for programs which are missing and the repositories come without a malicious code and Windows does not.

Most drivers are a part of the Linux kernel whereas Windows supports very little hardware and requires manufacture driver downloads.

Linux is more secure than Windows, because the firewall (iptables) is apart from the Linux kernel.

Malware is not seen in Linux, because software is installed directly from the Red Hat repositories.

I discuss security of Linux in my white paper, and this a relevant source, because it also discusses security of Linux. The relevance of this source is it comes from United Kingdom's Linux Format magazine. A strength of this source is that the article has a list format. A weakness of this source is that there are more than twenty reasons Linux is better than Windows, but are not listed in the source. A goal would be naming some headlines from the list of this website in my white paper, because Linux Format is legitimate.

This source provides a brief history of virtualization. It is relevant, because it has the virtual access software listed. The strength of this source is that it describes the six layers of VES for Red Hat Enterprise Linux. A weakness is that was published in 2006, and there is no updated revision. The source will help explain the six layers of virtual environment software in virtual access software.

I discuss security of Linux in my white paper, and this a relevant resource, because it also discusses security of Linux. A strength in this resource is the author holds a Master's Degree in Management Information Systems and writes for the Linux Foundation. The weaknesses of this resource are that I disagree with key factor #5, Linus law, as stated in the article due to freezing. I believe this article is a great summary of key factors of Linux security, and these key factors are going to be included with my white paper.

The source is relevant to my white paper, because it discusses SELinux. The source talks about Access Control Mechanisms, Security Enhanced Linux itself, and SELinux architecture and design. The strength of this source is that it tells

you where to deploy SELinux, and discusses recent additions to SELinux capabilities. A weakness of this source is that it does not show the limitations of SELinux and Mandatory Access Control. One of the goals of my white paper is to explain Mandatory Access Control (MAC) as well as Multi-level security (MLS) in SELinux, which are also covered in this article.

This source is relevant with the cyber cold war with China, Russia, and old cold war enemies. This source discusses disrupting communications systems, and disabling national infrastructure like a power grid. The strength is it mentions the threat from China and Russia, because these countries do the most hacking. The weakness is that it doesn't mention Red Hat Enterprise Linux. One of the goals is to focus on the cyber warfare from different countries.

This source is relevant, because it includes a brief history of secure virtualization with sVirt and provides industry knowledge on virtualization. A strength of the source is that it discusses powerful policy driven safety with low administration load. The weakness is that this source does not discuss the implementation of sVirt in Red Hat Enterprise Linux. This source will help me discuss sVirt and how it relates to SELinux in my paper.

This resource is a manual for virtualized environments found on the Red Hat website. Since this article discusses how checking is an allowed operation once standard discretionary access controls are checked, it is relevant to my white paper, because I am talking about mandatory access control. A strength is Red Hat's credibility, since Red Hat is credible their manuals should be credible. A weakness is that the manual was short and only had a dictionary description of the topic; therefore, this does not promote adequate information for the user. The manual is going to help me with proper definitions.

The source is relevant to my white paper, because it covers the roots of SELinux such as multi-level security (MLS), discretionary access control (DAC) and mandatory access controls (MAC). Since my paper talks about these controls, this resource will be valuable. The strength of this source is that it is a white paper, so it provides me with more knowledge on how to write my final paper. One weakness of the source is that the audience is for programmers, and may not be as well understood by non-programmers. The goal of using this resource is to help discuss SELinux's MAC and DAC in my paper.

This source deals with virtual machines including XEN, VMware, and KVM. This is relevant, because my white paper discusses VMware and KVM. A strength that this resource has is that it is a published book, and this only legitimizes its credibility. A weakness is that the book has a 2012 copyright, and the information can be outdated even if it is only a year old. I will use the security knowledge from this book for my white paper since I will be discussing targeted, multilevel, and strict security.

because my paper is about Red Hat. The weakness is that Fujitsu is from Japan; therefore, I cannot use some of the Fujitsu-centric terminology, because it is proprietary to that company. Since one of the goals in my white paper is to discuss virtualization, this should be an informative resource.

Anticipated PS4 games (2013-09-02 23:52)

My anticipated PS4 titles. The best console coming out in November.

Final Fantasy XV

Lords of the Fallen

Diablo 3 - I own it for PC, and would love single player and free MMORPG play.

Drive Club

Assassin's Creed IV

PS4 is less expensive (\$400) than xbox one (\$500).It's been a long time since I've cared about console gaming. Aside from a few stand out exceptions the last generation of consoles has been disappointing enough that I never actually bought any of the consoles; I was given my Wii for my birthday and my Xbox 360 was a red ringed hunk of plastic when I got it, albeit a red ringed hunk that was still under warranty. Suffice to say I wasn't impressed, and everything I've heard thus far about the "Next Generation" has me convinced that my decision to join the PC Gaming Master Race was the smartest thing I've done since deciding to forgive Blizzard for World of Warcraft's Cataclysm expansion. All the same though it's impossible to deny the console share of the video game market, and with Nintendo's Wii U having been released late last year the generation of the Console War has begun. Sony and Microsoft have both announced their next generation console, and with Nintendo marching to the beat of it's own drum as always Microsoft and Sony only really have each other to contend with. From initial reports though it's already shaping up to be so one-sided a fight in Sony's favor it's almost embarrassing to write this as if there will be an even fight. Still, here's the blow-by-blow based one what we know so far.

1. Technical Specifications

The biggest difference between the Playstation 4 and the Xbox One thus far is the power each system boasts. The Xbox One boasts 8GB of DDR3 RAM powered by a custom 8-core AMD CPU (Microsoft is being vague on the processor details) backed up with a 500GB hard drive. On Sony's side the Playstation 4 offers up an 8-core x86-64 AMD "Jaguar" CPU and 8GB of GDDR5 RAM and an unknown amount of hard drive space. Both pack a modest amount of RAM compared to a decent gaming PC, but it's 16 times the amount of RAM the previous generation of consoles offered. Both will also feature Blu-Ray support as well as online services and 4k support. The Playstation 4 also has Bluetooth compatibility while the Xbox One doesn't.

Overall the graphical fight between the Playstation 4 and Xbox One will remain neck and neck as it always has, though Sony's decision to use GDDR5 as opposed to the slower and more common DDR3 could prove decisive in the long run, as well as the Xbox One using 3GBs of that RAM on it's Operating System and Apps whereas the Playstation 4 will only use 1GB. Also the 500GB hard drive on the Xbox One can't be replaced and won't be user serviceable (though both consoles will feature external storage support).

2. Digital Rights Management/Used Games

This is an especially difficult paragraph to write given how even before the Xbox One was announced the rumors about the One's always online requirement and prejudice towards used games have made for some very potent gamer rage. I even wrote an article about it. All Sony has had to do is sit back and let Microsoft do all the talking and then say the exact opposite to win this category. While the Xbox One won't need to be online all the time, it will have to connect to the internet at least once in a 24-hour period (Or so conflicting Microsoft reports have said).

To throw in another dish of bad decisions, Microsoft has said that all games will be hard installed to the Xbox One's hard drive and linked to a unique Xbox Live account. This would function similar to the Steam gaming client, except that logging into your Xbox Live account on a console aside from your own won't give you access to the games linked to that account. And should you buy a pre-owned game better get your wallet ready to pay double: Microsoft plans to charge a fee equal to the game's original price for adding a used game to your account.

3. Console Goals

]

This is the category where the differences between the consoles really stand out. For months since the announcement of the Playstation 4 Sony has played itself up as the Anti-Microsoft and let it be known that while it will have other features, the Playstation 4 will be mostly about gaming. This contrasts Microsoft's goals for the Xbox One, which as the name implies they want to act as an all-in-one media box. In essence, it comes off that Microsoft's goal with the Xbox One is to compete with Smart TVs and computers hooked up to TVs rather than the Playstation 4 or even the Wii U. In addition to this, Microsoft has stated that they intend to continue making games for the Xbox 360 even after the One's release, which isn't a very powerful statement of confidence in the new console.

Ever since the One's announcement Microsoft has done nothing but backpedaling and running damage control. If all else fails, the Xbox One will serve as a terrible warning to future consoles.

Linux Mint 15 review (2013-09-05 20:32)

Linux Mint 14 was one of our favorite desktop distros of the last year. While there were some initial hiccups that required a 14.1 release, it was generally a much better release than the then current Ubuntu 12.10, which had been marred by the controversy over the Amazon searches in the dash. Cinnamon seemed like a much more welcome alternative when people's privacy was at stake. Cinnamon isn't the only option though, with MATE flanking Cinnamon as the alternate image on Mint's download page. With both 32 and 64-bit versions as standard for each, there isn't one overall DVD ISO with both on for you to try, however the images themselves are not much bigger than a CD, clocking in at around 900 MB. Installation is quick and painless if you want it to be, and more advanced if you have special needs for your system. On our test setups it took us only slightly more than ten minutes to go from booting into the live disc to a full installed Linux distro. First impressions of the distribution are great – the MDM Display Manager finally comes with user selection by default, rather than having to choose a GTK greeter after the fact. This default greeter is part of the new HTML 5 theming, which allows for animated themes using the web standard. There are already a few available to try out, such as a steam punky night time theme, or a futuristic space bound theme. There are more online created by users and web designers alike that can feel right at home with the familiar code.

The impressions continue well. A new digital clock resides on the desktop as one of the new desklets, similar to Android widgets. These interactive desktop spots are easily manipulated, so you can move, remove or add more easily depending on your preference. However, the selection is fairly small at the moment, with the most interesting desklet being an XKCD viewer. The default app selection is pretty good, which usually means it has Firefox, an IM client, and access to LibreOffice. It does actually come with GIMP and VLC by default, which is not all that common. Heading to the Mint Software Manager to get some more applications is always a great experience, as unlike the Software Centre in Ubuntu, you never feel like you're being babied with recommendations or "Technical Items" turned off. The interface is straightforward, and just the right balance of information and user-friendliness. Using Mint is very much a joy, and is aided by many of the new features in Mint 15. Nemo's overhaul has made changing your folder view on the fly very easy, allowing you to hide the sidebar at a touch of a button as well. The entire Cinnamon desktop is incredibly slick, much faster than the GNOME Shell, and a lot more customisable as well. All the customisation options for both the Cinnamon environment and the distro itself have been merged under one settings application - before the Mint Menu would have the Cinnamon Settings on it, and could get a touch confusing if you were quickly looking for the Settings application with the same icon. MATE as well has had some love, and while there isn't a huge difference visually for day-to-day users, a lot of minor speed improvements and optimisations have been performed on it. Caja, the file manager, has had a small aesthetic update, and can now use the Connect Server option from Nautilus. There's also new support for media keys as well, something a lot of more modern desktops have been able to use for a while now. It also seems to run with fairly low power requirements. Testing it on a laptop, we found it gave us up to 30 % extra battery life than Ubuntu running Unity would doing similar tasks. Frankly, we work faster on Linux Mint as well thanks to the variety of simple keyboard shortcuts for all kinds of desktop exposing and app switching operations, as well as the fairly smart hot corner that won't just activate if the mouse looks like it's moving there. Once again we find ourselves adoring the package that Clement and his team have put out. We haven't found a single problem with the distro, and the only thing we were disappointed at was the lack of desklets at the time of writing. With the new API for applets that links in to desklets, it's just a matter of time before the community begins to release more. Until then though, we're more than satisfied with the smooth, user-friendly experience that Linux Mint 15 and Cinnamon 1.8 provides to be our main distro for at least another six months.
